BULLISH

2026-10-13 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Bitcoin and Ethereum rose about 1.6% and 2.1% on October 13 as traders stayed long, but an $86 million hardware-wallet hack and South Korean stock crash sparked $800 million in crypto liquidations.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Gate	+4.2%	$1.95B	—	—	—	—	$2,497.70

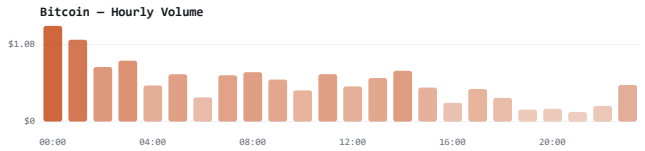

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

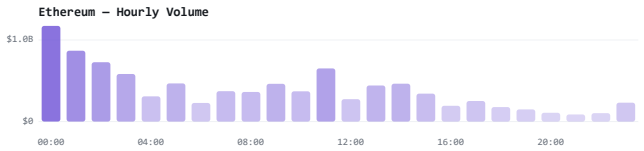

Traders remained heavily long: Binance's BTC long/short ratio stood at 1.50, with the largest traders even more bullish at 1.61. Ethereum was even more skewed, with a 3.03 long/short ratio. Open interest in coins declined slightly (BTC down 0.98%, ETH down 0.30%), but USD value rose (BTC up 0.60%, ETH up 1.78%), meaning traders did not aggressively add leverage as prices climbed. Funding rates are mixed: OKX and Binance show neutral to slightly negative rates on BTC (suggesting no strong bullish expectation), while Bybit shows heavy positive funding at 10.95% (suggesting some traders still expect higher prices). However, taker buy/sell ratios below 1 (BTC 0.915, ETH 0.902) indicate aggressive selling is stronger than buying—prices rose on passive buying, not aggressive demand.

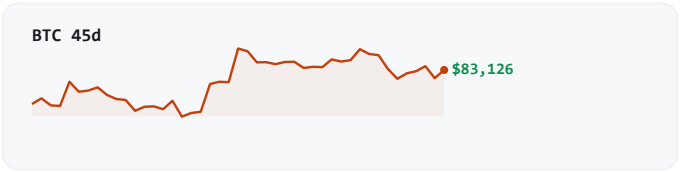

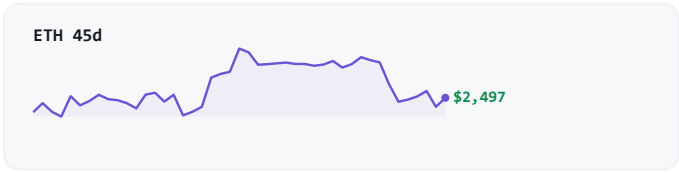

Funding Rate (annualised)

	Bitget	Bybit	OKX	Binance	Gate

Asian equities fell sharply on October 13, likely on AI sector concerns. South Korean technology stocks led declines: SK Hynix dropped 5.236%, Samsung Electronics fell 3.878%, and the KOSPI 200 ETF (KODEX 200) slid 3.086%. This collapse triggered over $800 million in crypto liquidations. Hong Kong and China equities were mixed, with gains in some tech names (Zhongji Innolight +3.056%, Unitree Robotics +3.547%) offsetting weakness elsewhere. US stock markets opened lower in sympathy but recovered: the S&P 500 (SPY) closed nearly flat at −0.01%, and the Nasdaq (ONEQ) declined modestly at −0.15%. The US Dollar fell 0.378%, gold fell 0.211%, and Treasury bonds (IEF) ticked up 0.123% as yields declined.

THE THREE THAT MATTERED MOST

Ledger confirms LTE implant in CryptoBilis-sold wallets steals recovery phrases; up to $86M suspected drain

Ledger confirmed a hidden LTE chip in hardware wallets sold through CryptoBilis (a reseller in Southeast Asia) that steals users' 24-word recovery phrases during setup. The implant leaves the wallet's Secure Element untouched but transmits the phrase via cellular connection. Approximately $86 million is suspected to have been drained from affected users. MediaMarkt has suspended Ledger sales in Europe as a precaution.

South Korean tech stocks collapse, triggering $800M+ crypto liquidations as Bitcoin briefly dips below $81K

South Korean technology stocks crashed on October 13, with SK Hynix dropping 5.236%, Samsung Electronics falling 3.878%, and the broader KOSPI market down 3.086%. The selloff—apparently tied to AI sector concerns—triggered a wave of cryptocurrency liquidations exceeding $800 million, with over $685 million in long positions forced closed. Bitcoin briefly fell below $81,000 before recovering to end the day at $83,125.

07 · GLOSSARY

Every term used today, in plain words

CS Gorkem T
CS Tarik O

Basis — The difference between futures prices and spot prices. When basis is zero, futures and spot are aligned.

Breadth (market breadth) — The percentage of all trading pairs that closed higher vs. lower on the day. Breadth above 50% means more coins went up than down, showing broad-based strength.

Fear & Greed Index — A daily sentiment score (0–100) measuring whether traders are afraid or greedy. Below 25 = extreme fear, 75+ = extreme greed. On Oct 13 it was 57 (Greed), down from 69.

Funding rate (funding) — Interest charged between long and short traders on perpetual futures every 8 hours. Positive = longs pay shorts (bullish sentiment, expect prices to rise). Negative = shorts pay longs (bearish sentiment). Annualized funding shows what the rate would be if paid yearly.

Liquidation — Forced closing of a leveraged position when collateral falls below the minimum required (maintenance margin). Results in realized losses and can happen in milliseconds during price drops.

Long/short ratio — The percentage of trader accounts holding long (bet price goes up) vs. short (bet price goes down) positions. A ratio of 1.50 means 1.5 longs for every 1 short (longs outnumber shorts).

Mark price — The price used to calculate gains, losses, and liquidations on perpetual contracts. Designed to stay close to spot price using funding rates, preventing artificial manipulation.

Open interest (OI) — The total dollar value (or coin quantity) of all open (unsettled) perpetual positions across all traders. Rising OI means new leverage is entering; falling OI means traders are closing bets.

Open-interest change — The day-over-day change in total open interest. A positive change means traders added net leverage; negative means they reduced bets.

Taker buy/sell ratio — The ratio of aggressive market buy orders (takers) to aggressive market sell orders. Above 1 means more aggressive buying; below 1 means more aggressive selling. Traders buying passively don't move this metric.

Top-trader long/short ratio — The long/short ratio among only the largest traders (not all accounts). Signals how institutional money and whales are positioned; more bullish or bearish than retail sentiment.
