02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 02:00 UTC), not daily figures.

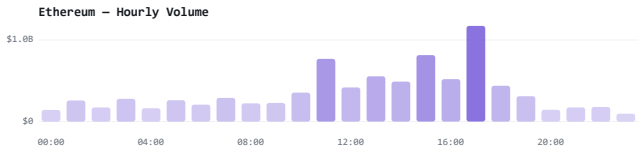

Bitcoin funding remained positive (0.0001 daily rate, or 10.95% annualized), suggesting traders still expected higher prices, but open interest fell 0.88% as people closed leveraged bets. Account holders were 1.5x long-biased (1.5 long positions per short), and the largest traders favored longs 1.29-to-1. However, the taker buy-to-sell ratio of 0.95 showed slightly more aggressive selling than buying, suggesting traders were exiting. Ethereum showed stronger long bias (2.64 longs per short) and even more selling pressure (taker ratio 0.94), with a steeper open-interest drop of 1.12%. Across all Binance futures contracts, only 30% of coins rose while 70% fell.
