All five major venues (Binance, Bybit, OKX, Bitget, Gate) agreed closely on price, with Bitcoin at $80,860–$80,870 and Ethereum at $2,363–$2,364. Binance led volume with $8.9 billion in BTC and $6.7 billion in ETH trading.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bitget	+7.8%	$2.91B	–	–	–	–	$80,871.20

Gate	+2.7%	$1.74B	—	—	—	—	$2,363.61

Funding, open interest and mark price are point-in-time (as of 03:00 UTC), not daily figures.

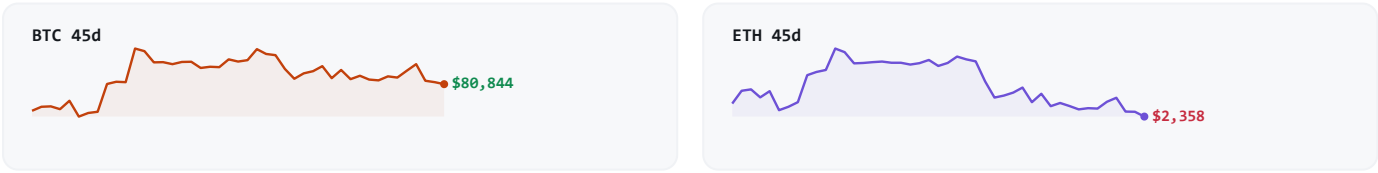

Bitcoin funding stayed elevated at 9.78% annualized, meaning traders betting long are paying shorts more than usual — a sign the market expects prices to keep rising, even as they fell. Open interest in Bitcoin grew 1.64% as new traders opened positions. The long-to-short ratio was 2.1 overall and 1.69 among the biggest traders — both bullish leanings, though the top traders were less bullish than smaller accounts. Taker buy-sell ratios were nearly balanced (1.00 for BTC, 0.99 for ETH), meaning no strong buying or selling pressure from aggressive traders. Ethereum's funding was lower at 6.16%, and its open interest actually fell 3.1% — more traders closed positions than opened new ones. Market breadth showed broad weakness: only 28.5% of all Binance perpetuals were up on the day, while 70.4% fell.

Funding Rate (annualised)

	Bitget	OKX	Bybit	Binance	Gate
BTC	+7.8%	+6.4%	+5.3%	+9.8%	+4.1%
ETH	+5.9%	+1.7%	+8.3%	+6.2%	+2.7%

U.S. evacuates Middle East personnel as Iran threats trigger crypto sell-off

The U.S. State Department evacuated staff from embassies and military bases across the Middle East after U.S. intelligence warned that Iran had substantially increased efforts to target Americans and that lethal plotting had reached advanced stages. The news pushed Bitcoin below $80,000 for the first time in over a month and sparked $841 million in liquidations, including $697 million in long positions.

Argentine court clears President Milei in LIBRA memecoin criminal case

An Argentine judge closed a criminal investigation into President Javier Milei over his promotion of the LIBRA token, which crashed in 2024. The 60-page ruling found that Milei's post promoting LIBRA did not, by itself, establish criminal fraud despite the attention his endorsement drew to the token.

U.S. Clarity Act stalls; Asia and Middle East gain competitive edge

The failure of the U.S. Clarity Act — stalled legislation meant to establish clear crypto regulatory rules — is pushing digital asset businesses toward faster-moving jurisdictions in Asia and the Middle East, according to Apex Group CEO Peter Hughes. The delay leaves U.S. firms in regulatory limbo while offshore competitors advance.

07 · GLOSSARY

CS Gorkem T

CS Tarik O

Every term used today, in plain words

Basis — The difference between futures price and spot (cash) price. Positive basis (futures trading above spot) means traders expect a rise; negative basis suggests they expect a fall.

Breadth (market breadth) — The percentage of all assets (coins, tokens, or perpetuals) that moved up, down, or flat on a given day. Breadth above 50% shows broad strength; below 50% shows broad weakness.

ETF net flows — The daily total of money flowing into (inflows) or out of (outflows) spot crypto ETFs. Positive flows mean more investors buying through funds; negative flows mean selling or redemption.

Funding rate — The interest rate that traders betting long (buy) pay to traders betting short (sell) in perpetual futures markets. A high positive rate means longs are paying shorts, signaling overconfidence in a rise; negative rates mean shorts pay longs. Rates reset every 8 hours.

Liquidation — Automatic closing of a trader's position by the exchange when losses exceed the collateral they posted. During sharp price moves, cascading liquidations can accelerate the decline as forced sales pile up.

Long-to-short ratio (or long/short ratio) — The proportion of traders betting the price will rise (long positions) versus those betting it will fall (short positions). A ratio above 1 means more longs; below 1 means more shorts. Does not measure size, only account count.

Mark price — The reference price that futures contracts use to calculate profit/loss. Usually an average of recent spot (cash) prices to prevent manipulation, it may differ slightly from the last trade price.

Open interest — The total number of unfilled buy or sell orders (open contracts) in the futures market. Growing open interest shows new money entering; shrinking shows traders closing positions and taking profits or losses.

Open-interest change — The day-over-day percentage shift in the total open contracts. An increase means more traders are opening new positions; a decrease means they are closing out, which often precedes a price reversal.

Perpetual futures (or perpetuals) — Contracts that let traders bet on price direction with leverage and no expiration date. Unlike regular futures, perpetuals trade continuously and use funding rates to keep the contract price close to the real asset price.

Stablecoin — A cryptocurrency designed to hold a fixed value (usually 1:1) to a real-world asset like the U.S. dollar (USDC, USDT) or another currency (Red Coin to Hong Kong dollar). Used as a trading pair and store of value within crypto.

Taker buy-sell ratio — The ratio of aggressive buyers (takers) versus aggressive sellers. Above 1 means more aggressive buying pressure; below 1 means more aggressive selling. Measured by the side of each trade filled at the market.

Top-trader long-to-short ratio (top position ratio) — The long-to-short balance among the largest traders only — a subset of the market. Differs from overall long-short because it isolates what the biggest money is doing.
