Bitcoin traded in a $2,506 range from $76,270 to $78,776, with all major venues in close agreement near $77,300. Binance led volume at $18.7 billion in BTC futures, followed by OKX at $10.1 billion.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

On Binance, BTC long/short ratio was 2.37 (significantly more bullish longs), with top traders even more bullish at 1.92, but taker buy/sell ratio of 0.925 showed slight selling pressure from active traders. ETH positioning was more extremely bullish at 3.30 overall, though top traders less extreme at 1.78. BTC funding remained positive at 10.95% annualized, attracting buyers, while ETH funding deeply negative at an average of 15% annualized across venues, signaling bearish sentiment. BTC open interest rose 2.29% while ETH fell 3.57%, and 59.3% of Binance perps traded higher, showing moderate bullish breadth despite the hack.

THE THREE THAT MATTERED MOST

Inside the largest crypto hack on record: How attackers breached Binance for $6.3 billion

Binance disclosed a $6.3 billion hack tied to North Korea, the largest cryptocurrency theft on record. Hackers exploited an Ethereum upgrade (EIP-7702) to bypass security checks using delegated signing to drain wallets. Tether and Circle froze roughly $1.79 billion in USDT and USDC within hours, the FBI and Secret Service launched investigations, and Binance set aside $6.34 billion to cover all user losses.

Binance Hack: Why Bitcoin Didn't Crash Like It Did in 2018

Bitcoin fell only about 3% following the $6.3 billion Binance hack, compared to roughly 11% when Binance was attacked in 2018. The smaller price reaction reflects a more mature and resilient market less vulnerable to single-exchange security failures.

Wall Street analysts urge investors to buy crypto stocks after $6.3 billion Binance hack

Analysts at Cantor Fitzgerald, TD Cowen, and Compass Point maintained buy ratings for crypto equities after the hack, characterizing it as a Binance-specific failure rather than a systemic crypto threat. They recommended US-regulated alternatives like Coinbase and Robinhood for institutional crypto exposure.

07 · GLOSSARY

Every term used today, in plain words

EIP-7702 — An Ethereum protocol upgrade that allows ordinary externally-owned accounts to execute smart contract code temporarily, enabling batched transactions and account abstraction. Used by the Binance hackers to bypass normal signing controls.

Funding rate — A periodic payment between long and short traders on perpetual futures contracts, designed to keep perpetual prices aligned with spot price. Positive rates mean longs pay shorts (bullish market); negative rates mean shorts pay longs (bearish market). Annualized funding is the periodic rate multiplied by the number of periods per year.

Hot wallet — A cryptocurrency wallet connected to the internet and used for frequent trading or withdrawals. Hot wallets are more vulnerable to hacking than cold storage but enable faster transaction processing.

Long/short ratio — The proportion of traders or trading volume in long positions (bets that price will rise) compared to short positions (bets that price will fall). A ratio of 2.0 means there are twice as many longs as shorts, indicating bullish sentiment.

Mark price — The reference price used by exchanges to calculate funding rates and prevent manipulation. Mark price is typically a weighted average of recent spot and perpetual prices, not the actual last trade price.

Market breadth — The percentage of assets in a market that traded higher (or lower) during a period. Breadth above 50% suggests a broad-based rally; below 50% suggests widespread weakness.

Open interest — The total value of outstanding derivative contracts (futures and perpetuals) on an asset, measured in coins or USD. Higher open interest indicates deeper liquidity and greater speculative activity. Open-interest change shows whether traders are adding to or reducing positions.

Stablecoin — A cryptocurrency designed to maintain a stable value, typically pegged to a fiat currency like the US dollar. USDT (Tether) and USDC (Circle) are the most widely used.

Taker buy/sell ratio — The ratio of market buy orders (takers) to market sell orders (takers), showing whether active traders are more aggressively buying or selling. Above 1.0 indicates more buying pressure; below 1.0 indicates more selling pressure.

Top-trader long/short ratio — The long/short ratio among the largest traders or accounts on an exchange, distinct from the overall market ratio. Extreme ratios among top traders can signal institutional positioning or potential reversals.
