DAILY MARKET REPORT

Friday, 23 October 2026

NEUTRAL / MIXED

2026-10-23 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Bitcoin and Ethereum both declined about 0.28% on 2026-10-23 as stock market weakness from AI sector fears triggered institutional selling, though HSBC's stablecoin rollout to 3.3 million users and rising oil prices offered some offset.

TOTAL MARKET CAP	BTC DOMINANCE	ETH DOMINANCE	FEAR & GREED	MARKET BREADTH
$2.73T	**59.5%**	**10.6%**	**50 — Neutral**	**35%**
-3.92%			prev 68	279 up / 512 down

01 · PRICE & VOLUME

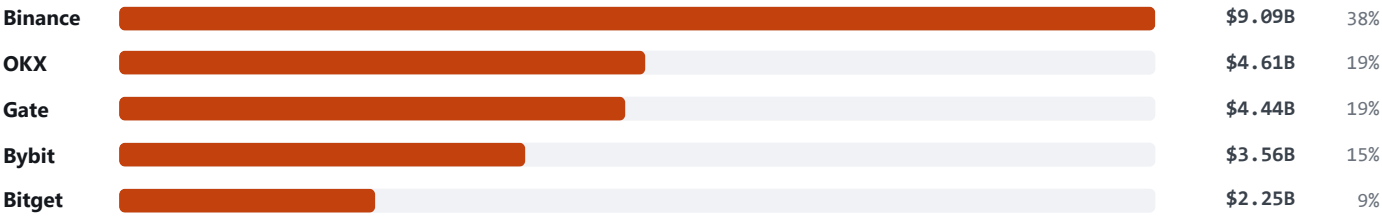

What every venue's price and volume did

The same two contracts on every exchange, for this UTC day. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

BITCOIN (BTC PERPETUAL)

$81,160.00 **-0.28%** $80,450.70 — $82,047.60

Spread: **$10.10** (0.0%) Total volume: **$23.95B**

ETHEREUM (ETH PERPETUAL)

$2,386.55 **-0.07%** $2,350.10 — $2,417.27

Spread: **$0.21** (0.0%) Total volume: **$18.48B**

ALTCOINS

COIN	CLOSE	CHANGE	HIGH	LOW	VOLUME
SOL Solana	$102.79	-0.79%	$105.22	$101.63	$1.11B
XRP XRP	$1.2944	-1.09%	$1.3301	$1.2807	$477M
BNB BNB	$739.76	+1.13%	$750.99	$730.17	$310M
DOGE Dogecoin	$0.07859	-0.25%	$0.08066	$0.07733	$306M
ADA Cardano	$0.2107	-0.61%	$0.2187	$0.2059	$132M
AVAX Avalanche	$9.055	-0.72%	$9.347	$8.854	$110M
LINK Chainlink	$11.824	-1.07%	$12.274	$11.585	$94M
SUI Sui	$0.9601	-1.21%	$1.0032	$0.9392	$185M

Bitcoin closed at $81,160 (down 0.28%) and Ethereum at $2,386.55 (down 0.07%). All five major exchanges reported tight price agreement around these levels. Binance accounted for the largest volume, with $9.09 billion in Bitcoin daily notional and $5.87 billion in Ethereum, comparable to other venues across the day.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bitget	+8.4%	$2.92B	–	–	–	–	$80,992.50
OKX	+2.9%	$2.47B	–	2.15	–	–	$80,988.30
Bybit	+3.9%	$5.09B	+0.8%	–	–	–	$80,984.84
Binance	+7.9%	$7.56B	-2.8%	2.10	1.48	0.91	$80,996.95
Gate	+6.2%	$4.60B	–	–	–	–	$80,998.46

ETHEREUM

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bybit	+5.8%	$1.88B	-4.7%	–	–	–	$2,383.06

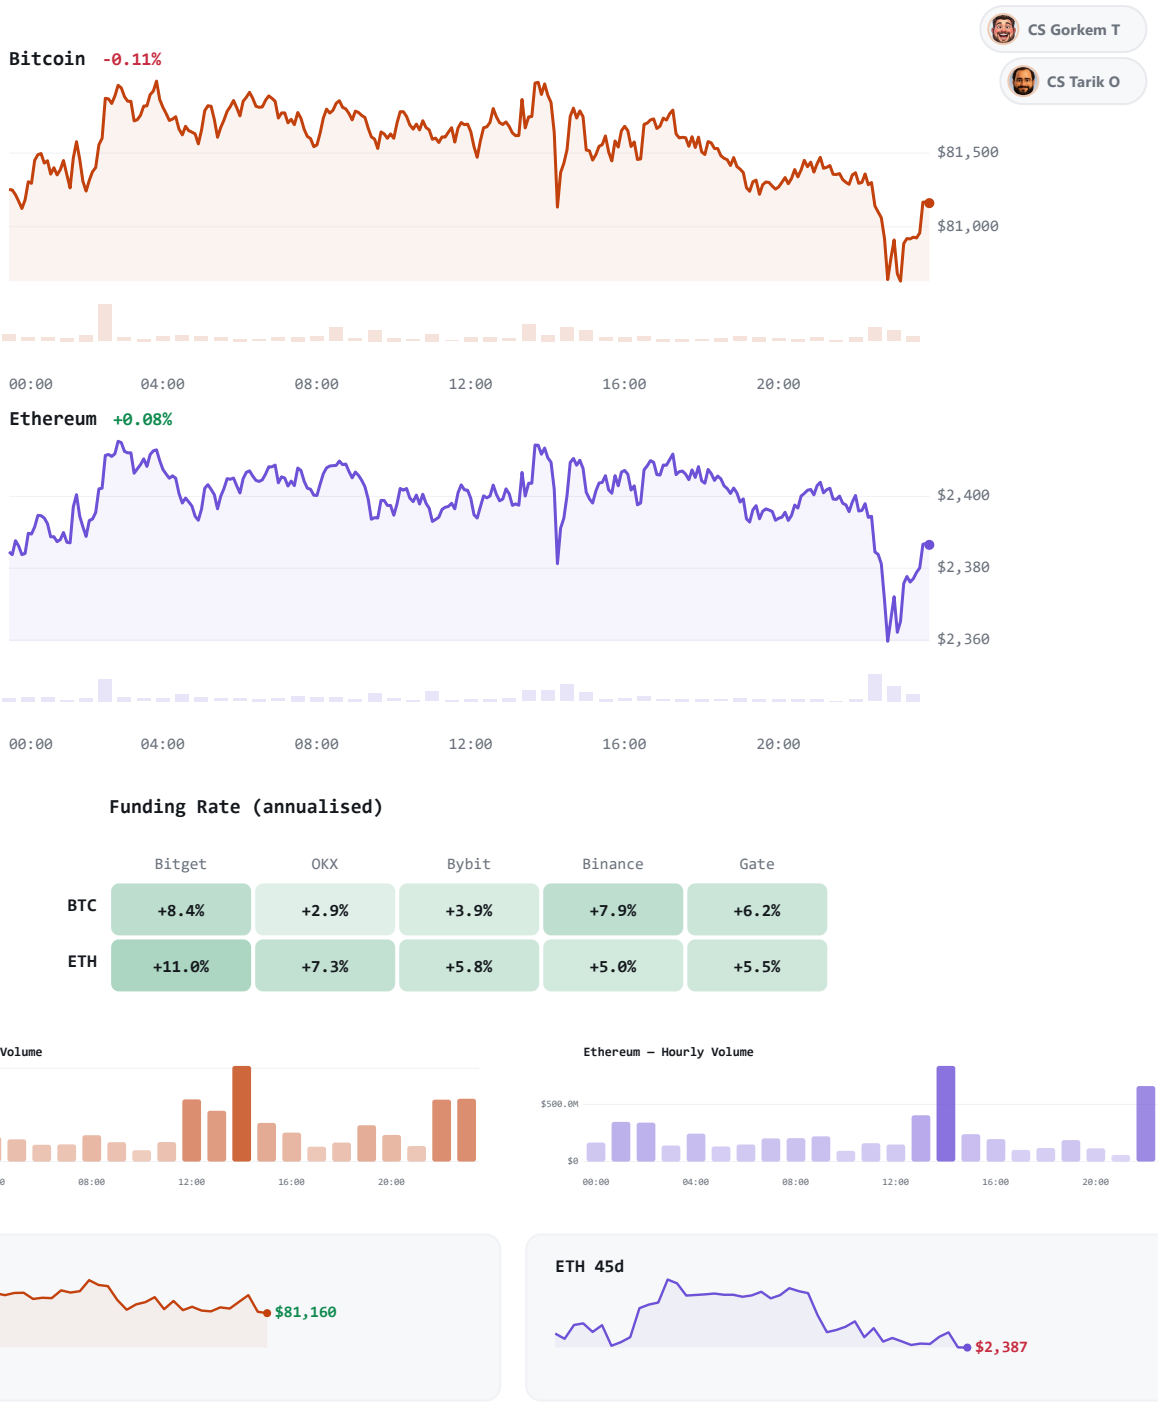

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bitget	+11.0%	$1.87B	—	—	—	—	$2,383.29
Binance	+5.0%	$5.54B	-0.7%	3.55	1.65	0.95	$2,383.06
OKX	+7.3%	$1.44B	—	2.60	—	—	$2,383.14
Gate	+5.5%	$1.80B	—	—	—	—	$2,383.45

CS Gorkem T

CS Tarik O

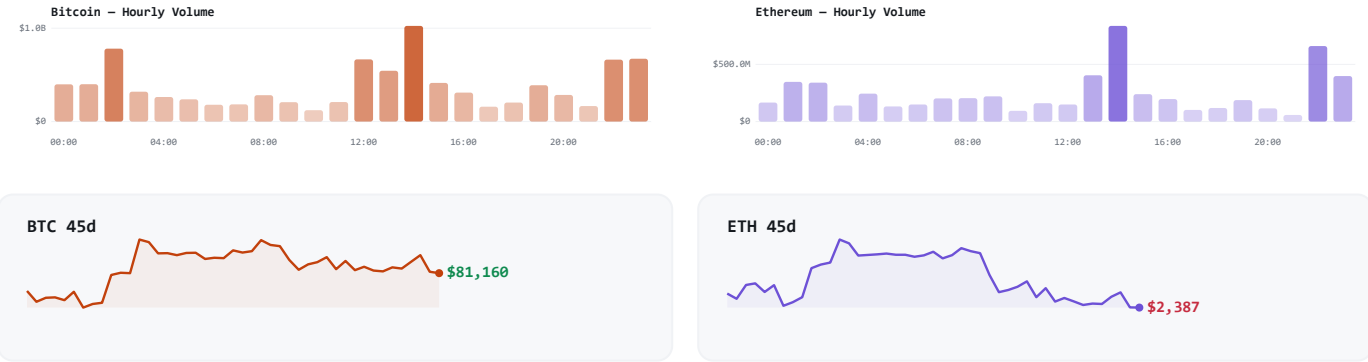

Funding, open interest and mark price are point-in-time (as of 04:00 UTC), not daily figures.

Funding rates remained elevated—Bitcoin's 8-hour rate of 0.0000725 annualized to 7.94%, and Ethereum's 0.00004541 annualized to 4.97%—showing traders still held bullish positions despite the down day. However, open interest declined sharply: Bitcoin lost 3.03% in OI and Ethereum lost 0.74%, indicating traders unwound leverage. Long-to-short ratios on all accounts stayed bullish (Bitcoin 2.10, Ethereum 3.55), but the largest traders showed weaker conviction (Bitcoin top-position ratio 1.48, Ethereum 1.65). Taker buy-to-sell ratios fell below 1.0 on both assets (Bitcoin 0.91, Ethereum 0.95), meaning aggressive selling dominated the day—for every 1 unit of taker buying there was 1.10 units of taker selling on Bitcoin. Market breadth was weak: only 35% of Binance perpetuals closed higher, signaling broad-based losses across the board.

Funding Rate (annualised)

	Bitget	OKX	Bybit	Binance	Gate
BTC	+8.4%	+2.9%	+3.9%	+7.9%	+6.2%
ETH	+11.0%	+7.3%	+5.8%	+5.0%	+5.5%

03 · BIGGEST MOVERS

The coins that moved the most

The largest moves on Binance for this UTC day, with the reason where the news supports one.

Palladium XPD	$1,049.79	-0.89%	$6M

Asian equities showed two stories. Chinese and Hong Kong tech stocks bounced: Unitree Robotics (Shanghai exchange) surged 18.5%, Hong Kong's Zhipu AI rose 5.9%, and MiniMax climbed 9.9%, while South Korean semiconductors held steady (SK Hynix +0.3%, Samsung +0.9%). US equities fell sharply on AI sector anxiety: the S&P 500 dropped 0.52% and Nasdaq fell 0.21%, driving the day's crypto weakness in tandem. Oil rallied hard—WTI crude jumped 3.4% to levels not seen since mid-April, and Brent rose 2.2%—likely reflecting geopolitical unease and persistent demand expectations. Gold edged down 0.18%.

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

Live updates: Bitcoin holds above $81,000 as the AI rout fades and oil climbs

US stock market weakness on AI sector concerns drove the day's broad selloff, with the S&P 500 falling 0.52% and the Nasdaq down 0.21%. Bitcoin consolidated above $81,000 despite broader equity market pressure, while oil rallied to six-month highs (Brent crude above $116/barrel) on geopolitical and demand factors.

Bitcoin ETFs swing back to net outflows as $636 million in withdrawals erase previous day's inflows

US spot Bitcoin ETFs recorded net outflows of $635.6 million on Thursday, October 22, with BlackRock's iShares Bitcoin Trust (IBIT) leading withdrawals at $254.1 million. This was the largest single-day outflow since June 25, 2026, and ended a three-day inflow streak, signaling institutional rotation away from Bitcoin allocations.

07 · GLOSSARY

Every term used today, in plain words

CS Gorkem T
CS Tarik O

Bitcoin dominance — The percentage of total cryptocurrency market capitalization held by Bitcoin. Higher dominance indicates Bitcoin strength relative to altcoins; lower dominance indicates altcoin strength.

Funding rate — A periodic payment between traders holding long and short positions in perpetual futures, designed to keep the derivative contract price aligned with the spot market price. Positive funding rates mean long traders pay short traders; negative rates are the reverse. High funding rates suggest strong bullish positioning and may signal overheating.

Leverage — Borrowed money used to amplify trading exposure. For example, 10x leverage means a trader controls 10 times more notional value than their own collateral. Higher leverage increases potential profits but also risk of liquidation.

Liquidation — The forced closure of a leveraged trading position when collateral falls below the maintenance threshold, typically triggered by adverse price moves. Liquidations can cascade during sharp market moves, amplifying losses.

Long position — A bet that an asset's price will rise. Traders holding long positions profit when the price goes up and lose when it falls.

Long-to-short ratio — The proportion of trader accounts or contract volume holding bullish (long) positions compared to bearish (short) positions. A ratio above 1.0 means more bullish accounts than bearish; below 1.0 means more bearish accounts.

Mark price — A reference price used for calculating perpetual futures positions, liquidations, and funding payments. It is typically derived from a median, weighted average, or fair-value calculation across multiple spot and futures prices to prevent manipulation.

Market breadth — The percentage of assets in a market that closed higher versus lower for a given period. Low breadth (e.g., 35% up) indicates broad-based losses; high breadth (e.g., 70% up) indicates broad gains. Breadth helps determine whether price moves are driven by a few leaders or spread across many assets.

Net inflow / outflow — The net change in assets held by an ETF or fund, calculated as total new deposits minus total withdrawals. Positive flows show investor interest; negative flows show investor exit or reallocation.

Open interest — The total notional value or amount of all unfilled (outstanding) derivative contracts across an exchange or market. Higher open interest suggests greater leverage is in the market; rapidly rising or falling open interest can signal shifting trader positioning.

Open-interest change — The percentage shift in total open interest from one day to the next. Positive change means leverage increased; negative change means traders unwound positions.

Perpetual futures — Leveraged derivative contracts that track an underlying spot price but have no expiration date, allowing traders to maintain positions indefinitely. They use funding rates to keep the contract price aligned with spot.

Short position — A bet that an asset's price will fall. Traders holding short positions profit when the price goes down and lose when it rises.

Spot ETF (Bitcoin/Ethereum) — An exchange-traded fund that holds actual Bitcoin or Ethereum coins rather than derivatives or futures. Net inflows indicate new investment in the underlying asset; net outflows indicate institutional selling or reallocation.

Stablecoin — A cryptocurrency designed to maintain a stable value, typically pegged to a government currency (e.g., US dollars, Hong Kong dollars) or a basket of assets. Used primarily for payments and collateral rather than speculation.

Taker buy-to-sell ratio — The proportion of market-initiated trades (taker trades) that were buys versus sells. A ratio above 1.0 means more aggressive buying than selling; below 1.0 means more aggressive selling. Ratios near 0.9–1.1 suggest balanced pressure.

Top-position ratio (largest traders) — The long-to-short ratio specifically for the largest trader accounts (typically the top 1% by position size), showing the conviction of institutional or whale traders separate from retail accounts. Lower ratios can signal reduced conviction among big players.
