STRONG BEARISH

2026-10-29 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Bitcoin crashed 4.1% to $77,970 on Oct 29 as a suspected $5.7 billion Binance hack—the largest crypto theft on record—panicked traders into broad selling.

Bitcoin and Ethereum prices were stable across all five major venues despite the Binance hack news. Bitcoin fell 4.1–4.13%, Ethereum fell 4.5–4.51% consistently. Binance led volume with $20.3 billion in Bitcoin and $13.8 billion in Ethereum trading, followed by OKX and Bybit.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

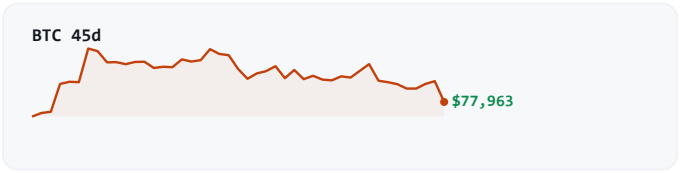

Open interest rose sharply overnight despite the price fall—Bitcoin open interest up 8.3% on Bybit, Ethereum up 8.4%—showing traders were opening new long (bet-price-goes-up) positions even as prices crashed, a sign of overconfidence that may have amplified the decline. Funding rates split: Binance showed positive funding at 4% annualized, suggesting longs paying shorts; Bybit showed negative -8.2%, the opposite. The largest traders held heavy long positions (Bitcoin top-trader ratio 1.86-to-1 long, Ethereum 1.88-to-1 long). Market breadth was severely negative: only 11.8% of Binance perpetuals went up while 88.2% fell. Taker buy/sell ratio on Bitcoin was 0.99 (nearly balanced, minimal aggressive buying) and 1.02 on Ethereum (slight buying), showing neither side dominated intraday flow.

Asian stock derivatives showed heavy crypto contagion diverging sharply from actual cash-market strength. Korea's real stock market surged 6.6% with SK Hynix jumping 10% on record earnings, yet Binance Korea perp futures for SK Hynix fell 4% and Samsung fell 5.6%—traders were not following actual strength, likely spooked by Binance news. Hong Kong and China tech perps both declined steeply (Zhongji Innolight -13.5%, Zhipu AI -11.3%, Lenovo -10.9%), matching the US tech sell-off. US equities slumped: S&P 500 -0.38%, Nasdaq -1.43%, with Intel down 46% and Nvidia-dependent stocks bleeding. Commodities: gold fell 1.1% and precious metals declined 2–3.7%, but oil rose slightly (WTI +0.9%, Brent +0.9%), suggesting some haven demand but no panic in energy.

THE THREE THAT MATTERED MOST

Binance suffers $5.7 billion hack—largest crypto theft on record

Binance, the world's largest crypto exchange, suffered a security breach on Oct 29 with approximately $5.7 billion in assets drained from hot wallets (online storage). Tether and Circle immediately froze $1.79 billion in USDT and USDC stablecoins to prevent the hacker from converting them to cash. The hack sent Bitcoin crashing to $78,300 and rattled the broader market, with most cryptocurrencies falling 4–6%.

Polymarket suffers $2.65 million exploit after third-party provider breach

Polymarket, a prediction-market platform on Ethereum, paused trading after attackers exploited a compromised third-party provider and drained approximately $2.65 million from user accounts in minutes. The platform resumed in cancel-only mode (users can only withdraw, not trade) to prevent further losses. No user data breach was reported, only the financial loss.

NYSE owner ICE partners with Trade[XYZ] to bring regulated Hyperliquid perpetual futures to the US

Intercontinental Exchange (ICE), owner of the New York Stock Exchange, signed an agreement to launch US-regulated perpetual futures built on Hyperliquid technology through Trade[XYZ], a crypto startup. The deal was announced on Oct 29 and sent Hyperliquid's token (HYPE) surging 13–15%. Billionaire Stanley Druckenmiller made his first X post ever to back the venture, signaling institutional confidence in decentralized futures.

Circle seeks SEC rule changes to reduce stablecoin issuer compliance burden

Circle, the issuer of USDC stablecoin, sent a letter to the US Securities and Exchange Commission requesting separate permissions for different business lines (offerings, brokerage capital, customer reserves) to reduce costly regulatory overlap. The request reflects ongoing tension between stablecoin issuers and US financial regulators.

07 · GLOSSARY

Every term used today, in plain words

Basis — The time period or measurement method used to report price changes and volume (e.g., 'utc-day' means a calendar day in UTC).

Breadth — The percentage of coins or assets in a market that moved up versus down. High breadth (many coins up) signals broad buying; low breadth (most coins down) signals broad selling.

Exchange — A platform where people trade cryptocurrencies for other cryptocurrencies or traditional money.

Funding rate — A small payment perpetual-futures traders make to each other every 8 hours. A positive rate means those betting prices will rise (longs) pay those betting prices will fall (shorts), and vice versa. Extreme rates signal overconfidence in one direction.

Hot wallet — An exchange's or service's internet-connected digital storage for user funds, used for withdrawals and deposits. Hot wallets are easier for hackers to access than offline cold storage.

Long / short (position) — A 'long' position is a bet that an asset's price will rise; a 'short' position is a bet that it will fall. A long/short ratio (e.g., '2-to-1 long') means twice as many traders are betting up as betting down.

Long/short ratio — The ratio of account-holders with long (bet price rises) versus short (bet price falls) positions. A ratio above 1 means more accounts are long; below 1 means more are short. Not the same as leverage—just direction bias.

Mark price — The reference price used to calculate profits and losses on perpetual futures. It is calculated from recent trades and indices to prevent manipulation.

Open interest — The total value or number of open positions in a perpetual futures market at a specific point in time. Rising open interest means more positions are being opened; falling means they are being closed.

Open-interest change — The percentage change in total open positions between two points in time. Rising OI into falling prices is often a warning sign of forced liquidations to come.

Perpetual futures (perps) — A type of leveraged contract that lets traders bet on an asset's price going up or down without a fixed expiration date. Unlike a futures contract with an end date, perpetuals can stay open indefinitely.

Stablecoin — A type of cryptocurrency designed to hold a fixed value (e.g., 1 USDC = $1 USD). Stablecoins are used as a safe way to move money between exchanges without price risk.

Taker buy/sell ratio — A measure of how aggressively buyers versus sellers are initiating trades during a period. A ratio above 1 means buyers are more aggressive; below 1 means sellers are more aggressive.

Top-trader long/short ratio — The long versus short position ratio among the largest traders on an exchange (not all traders). It shows which direction the biggest, smartest money is positioned.

Volume — The total value or number of trades in a market during a period, usually measured in 24 hours. High volume indicates active trading; low volume can mean illiquid or thin markets.
