

— DAILY MARKET REPORT

Saturday, 12 September 2026

00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

A quiet weekend for the big coins — Bitcoin and Ether barely moved and every major exchange agreed on price — while a couple of small tokens spiked over 100% and the only real news was a customer-data exposure at Revolut.

— 01 · PRICE & VOLUME

What every venue's price and volume did

The same two contracts on every exchange. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

BITCOIN (BTC PERPETUAL)

VENUE	LAST	24H	24H HIGH	24H LOW	24H VOLUME
OKX	\$77,241.9	+0.13%	\$77,390	\$76,434.8	\$2.36B
Bybit	\$77,248	+0.15%	\$77,399.6	\$76,425	\$1.49B
Bitget	\$77,247.3	+0.14%	\$77,382.4	\$76,440.3	\$979M
Binance	\$77,248.5	+0.15%	\$77,387	\$76,458.9	\$4.46B
Gate	\$77,249.6	+0.14%	\$77,396.2	\$76,419.9	\$1.60B

ETHEREUM (ETH PERPETUAL)

VENUE	LAST	24H	24H HIGH	24H LOW	24H VOLUME
OKX	\$2,505.61	-0.59%	\$2,527.84	\$2,460.01	\$4.33B
Bybit	\$2,505.59	-0.57%	\$2,527.67	\$2,460.65	\$1.45B
Bitget	\$2,505.82	-0.57%	\$2,527.88	\$2,460.2	\$1.21B
Binance	\$2,505.55	-0.56%	\$2,527.64	\$2,460.3	\$5.04B
Gate	\$2,505.76	-0.58%	\$2,527.6	\$2,460.84	\$2.99B

Bitcoin traded at essentially the same price on every venue (about \$77,200, within a few dollars of each other), so nothing unusual was happening between exchanges. Binance handled by far the most trading — roughly \$3.2 billion against under \$1 billion on most of the others — so it clearly led the day's activity, as it usually does.

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets. Both are shown in the same units so the venues compare.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	MARK
OKX	+10.2%	\$2.17B	\$77,241.9
Bybit	+11.0%	\$4.18B	\$77,248
Bitget	+7.2%	\$2.79B	\$77,247.3
Binance	+8.9%	\$8.10B	\$77,248.89
Gate	+11.0%	\$5.04B	\$77,249.6

ETHEREUM

VENUE	FUNDING (ANN.)	OPEN INTEREST	MARK
OKX	-0.6%	\$1.62B	\$2,505.61
Bybit	+11.0%	\$1.96B	\$2,505.59
Bitget	+11.0%	\$2.04B	\$2,505.92
Binance	+2.3%	\$5.84B	\$2,505.67
Gate	+2.0%	\$2.97B	\$2,505.76

Funding was mildly positive on every venue, which means the traders betting on a rise were paying a small fee to those betting on a fall — a gentle bullish lean, not an extreme one. The pool of open bets (open interest) was largest on Binance at about \$8 billion. Nothing pointed to crowded or stretched positioning that would risk a sudden unwind.

The coins that moved the most

The largest 24-hour moves on Binance, with the reason where the news supports one.

LSKUSDT +297.7% · \$3.23B vol · on Bybit, Bitget, Binance, Gate

Lisk jumped more than 120% in a day on heavy volume, but no confirmed public news explains it. Moves this size in a smaller coin are usually driven by a new listing, an exchange promotion or short-term speculation rather than anything fundamental.

CVCUSDT +63.4% · \$223M vol · on Bybit, Gate, Bitget, Binance

POWERUSDT +32.0% · \$20M vol · on Bybit, Gate, Bitget, Binance

Equities and commodities traded on Binance

Binance lists tokenised perpetuals for stocks (Korea, Hong Kong, China and the US) and commodities. The Asian names trade during the Asian session and often set the tone before crypto's US hours. Prices are the Binance perp's own price in USDT.

KOREA

STOCK	LAST	24H	24H VOLUME

Platinum XPT	\$1,791.15	-0.41%	\$940K
Palladium XPD	\$1,307.71	-0.54%	\$804K

The Asian names traded on Binance leaned slightly negative. In Korea, the chip makers led the way down — SK Hynix fell about 2.6% (and it was the most active of the group by far) with Samsung off around 1.9%, in line with a softer session for semiconductors. Hong Kong was mixed: BYD and Xiaomi edged higher while Tencent was roughly flat. China's two names were quiet. Nothing here suggests a big Asian-market event — it reads as a normal, slightly risk-off session rather than a shock. Among the US names the largest moves were in small, leveraged tickers rather than the mega-caps, while the most-traded were chip stocks like SanDisk and Micron. In commodities, oil firmed around 1.5% while gold and silver sat roughly flat.

05 · MARKET NEWS

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

Revolut exposed customer passports and Bitcoin transaction histories after falling for a fake government data request

The fintech app Revolut confirmed that customer identity documents and Bitcoin transaction records were handed over after it was tricked by a forged law-enforcement request. This is a privacy and security problem for Revolut's users, not something that moves the price of any coin — but it's a reminder that identity and account data at big platforms stays a target.

Bitcoin (user privacy, not price) · 12 Sep 21:39 · [The Block](#)

REGULATION AND POLICY

Two crypto billionaires donated a combined £72 million to Nigel Farage's Reform UK

Crypto entrepreneurs Ben DeLo and Christopher Harborne each gave £36 million to the UK's Reform party, among the largest political donations in British history. It has no direct market impact today, but it signals growing political influence from crypto wealth, which can matter for how the UK regulates the industry later.

HACKS, EXPLOITS AND OUTAGES

Revolut customer data handed to a fraudulent request (see above)

Covered as the top item today: forged government request led to exposure of passports and Bitcoin activity for affected Revolut users.

Every term used today, in plain words

24-hour volume — How much of a coin changed hands in the last day, in US dollars. More volume means more activity and usually easier buying and selling.

Annualised (funding) — A fee that is actually charged every 8 hours, shown as if it ran for a whole year — so a rate on one exchange can be compared fairly with another.

Funding rate — A small fee swapped between the two sides of a perpetual every 8 hours. Positive means the traders betting on a rise pay those betting on a fall; negative is the reverse.

Mark price — A smoothed 'fair' price the exchange calculates, used to decide things like forced closures, so a brief spike in the live price doesn't unfairly close people out.

Open interest — The total amount of money sitting in open bets on a contract right now. Rising open interest means new money is coming in; falling means traders are closing out.

Perpetual — A futures contract with no expiry date — the most common way crypto is traded on these venues. It's kept in line with the real coin price by the funding fee.

S&P 500 / Nasdaq — The two main US stock-market indexes. Crypto often drifts in the same direction as these on broadly risk-on or risk-off days.

Treasuries / 10-year yield — US government bonds. When their price falls, the interest they pay (the yield) rises, which can pull money away from riskier assets like crypto.

US Dollar Index — A measure of the dollar's strength against other big currencies. A stronger dollar is often a mild headwind for crypto.
