

DAILY MARKET REPORT

Sunday, 13 September 2026

2026-09-13 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Bitcoin and Ethereum fell slightly as Asian chip stocks tumbled on AI slowdown concerns; a Senate vote on crypto regulation is scheduled for September 15.

01 · PRICE & VOLUME

What every venue's price and volume did

The same two contracts on every exchange, for this UTC day. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

BITCOIN (BTC PERPETUAL)

VENUE	CLOSE	CHANGE	HIGH	LOW	VOLUME
OKX	\$76,793.5	-0.59%	\$77,425	\$76,434.8	\$2.74B
Bybit	\$76,789	-0.59%	\$77,443	\$76,425	\$1.89B
Binance	\$76,805	-0.57%	\$77,427.4	\$76,458.9	\$5.23B
Bitget	\$76,800.5	-0.57%	\$77,420	\$76,440.3	\$1.19B
Gate	\$76,796.5	-0.58%	\$77,430	\$76,419.9	\$2.06B

ETHEREUM (ETH PERPETUAL)

VENUE	CLOSE	CHANGE	HIGH	LOW	VOLUME
Bybit	\$2,475.31	-1.96%	\$2,526.64	\$2,460.65	\$1.74B
OKX	\$2,475.66	-1.95%	\$2,526.68	\$2,460.01	\$4.97B
Binance	\$2,475.48	-1.95%	\$2,526.71	\$2,460.3	\$5.82B
Bitget	\$2,475.9	-1.94%	\$2,526.91	\$2,460.2	\$1.38B
Gate	\$2,475.78	-1.94%	\$2,526.82	\$2,460.84	\$3.52B

Bitcoin at \$76,855 and Ethereum at \$2,483 declined modestly (down 0.5–1.6%) with near-identical pricing across Binance, Bybit, OKX, Bitget, and Gate. Binance led trading volume for both majors, with ETH attracting particularly heavy flow (\$6.4 billion on Binance).

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	MARK
OKX	+5.6%	\$2.16B	—	1.48	\$77,686.3
Bybit	+6.8%	\$4.14B	+0.2%	—	\$77,687.9
Binance	+4.9%	\$8.24B	+1.0%	1.66	\$77,687.4
Bitget	+5.9%	\$2.75B	—	—	\$77,686.4
Gate	+9.7%	\$4.96B	—	—	\$77,687.4

ETHEREUM

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	MARK
Bybit	+11.0%	\$2.01B	-0.3%	—	\$2,510.99
OKX	+6.2%	\$1.62B	—	1.27	\$2,510.9
Binance	+7.5%	\$5.90B	-1.6%	2.98	\$2,510.92
Bitget	+11.0%	\$1.98B	—	—	\$2,511.15
Gate	+11.0%	\$3.13B	—	—	\$2,510.92

Funding, open interest and mark price are point-in-time (as of 11:35 UTC), not daily figures.

Funding rates on major Bitcoin positions remained elevated across venues (Binance 9.5% annualized, Gate 9.5%), showing traders still holding bullish bets despite the day's decline. Ethereum funding was also moderately high (Bitget 10.6%, OKX 6.3%). Open interest remained stable. The volatile mover Lisk exhibited extreme negative funding rates (Binance -2,941% annualized, Gate -4,006%), indicating severe short positioning despite its 56% price surge—a sign of forced short liquidations.

Korean and Hong Kong equities took heavy losses following Anthropic CEO Dario Amodei's published call for slower AI development (September 12–13). The KOSPI fell 4.4% with SK Hynix down 4.2% and Samsung Electronics down 3.4%, as investors repriced expectations for semiconductor demand. Hong Kong tech stocks were mixed: Xiaomi rose 2.2% and Tencent +0.5%, but AI-focused names like Zhipu AI slipped 1.0%. Fears of Chinese AI competition (DeepSeek, Moonshot) compounded concerns. US equities held steadier—the S&P 500 gained 0.85% and Nasdaq 0.88%—though leveraged short positions (SOXS +7.6%) rallied as chip futures sank. Oil gained on Middle East tensions (WTI +2.9%, Brent +2.7%); gold and precious metals were flat to down.

05 · MARKET NEWS

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

Anthropic Chief Urges Slower AI Development for Safety

Anthropic CEO Dario Amodei published an essay calling for a deliberate slowdown in frontier AI development to ensure safety protocols are robust. OpenAI CEO Sam Altman publicly agreed, and Elon Musk said Amodei was correct. The announcement spooked chip stocks globally, as investors repriced semiconductor demand if AI infrastructure spending plateaus.

Symbiosis Bitcoin Bridge Exploited; 15 BTC Recovered, \$336K Realized Loss

An attacker exploited Symbiosis's Bitcoin Bridge on September 11, minting approximately \$46.1 billion notional in unbacked syBTC but realizing only \$336,000 in actual proceeds before detection. The protocol team recovered 15 BTC and offered the attacker a 20% white-hat bounty. Other Symbiosis routes (EVM, TRON, TON) remained unaffected.

Circle Acquires Tazapay for \$400 Million to Expand USDC Reach into Emerging Markets

Circle agreed to acquire cross-border payments firm Tazapay for \$400 million in an all-stock deal. Tazapay operates \$25 billion in annualized payment volume, banking partnerships in over 100 markets, and stablecoin rails in roughly 60% of them. The acquisition—Circle's largest since Poloniex—signals institutional focus on USDC adoption in emerging economies where rival Tether has long been entrenched.

REGULATION AND POLICY

Senate Clarity Act Cloture Vote Scheduled for September 15

The U.S. Senate will hold a procedural cloture vote on September 15 at 14:15 EDT (18:15 UTC) on the Clarity Act, a major crypto regulatory framework. The vote requires 60 senators to proceed to debate; Republicans hold 53 seats, so passage requires seven Democrats. Three disputed sections remain unresolved: ethics rules for President Trump's crypto holdings, DeFi developer liability, and Coinbase's USDC yield revenue. Polymarket odds for the bill becoming law in 2026 have collapsed to 16%.

Revolut Confirms Customer Data Breach via Fake Government Email

Fintech Revolut disclosed that an unauthorized party used a fraudulent email impersonating a government agency to extract sensitive customer data. Exposed information included identity documents (passports, driver's licenses), selfies, and transaction histories affecting over 50,000 customers. Revolut's systems and customer funds were not compromised. The company alerted relevant regulatory and enforcement agencies.

— 07 · GLOSSARY

Every term used today, in plain words

Annualized funding rate — The annual percentage cost for traders borrowing money to hold a leveraged position. If the rate is 10% annualized, a trader pays roughly 10% per year to hold a long position, or receives 10% per year if shorting. High rates signal aggressive bullish betting; negative rates signal bearish betting.

Bear — An investor or trader who believes a price will fall.

Bitcoin bridge — A program that lets Bitcoin move to other blockchains (like Ethereum). For example, you can deposit real Bitcoin and get syBTC on Ethereum; later you can swap syBTC back for real Bitcoin. A bridge exploit is when a hacker tricks the bridge into minting fake Bitcoin replacements.

Bull — An investor or trader who believes a price will rise.

Cloture vote — A Senate procedure to end debate and force a vote. Requires 60 votes to pass. If it passes, the Senate can vote on the main bill.

Collateral — Assets you deposit to borrow money or trade with leverage. If your position loses too much, the platform sells your collateral to recover the loan.

Crypto (cryptocurrency) — Digital money that runs on a blockchain (a distributed ledger) rather than being controlled by a central bank. Bitcoin and Ethereum are cryptocurrencies.

ETF flows — The net amount of investor money flowing into or out of an exchange-traded fund (ETF) on a given day. Large inflows can signal institutional buying; large outflows signal selling.

Ethereum — A blockchain and cryptocurrency launched in 2015. Unlike Bitcoin, Ethereum can run programs (smart contracts) on it. Its token is called Ether (ETH).

Funding rate — The interest rate traders pay to hold a leveraged position. Positive rates mean longs pay shorts; negative rates mean shorts pay longs.

Futures (or perpetual contracts) — A standardized bet that lets you wager on whether a crypto price will go up or down, with leverage (borrowed money). Unlike traditional futures that expire on a date, perpetual contracts can stay open indefinitely as long as you maintain collateral.

Hard fork — A major upgrade to a blockchain that changes the rules—old versions are no longer compatible. The term is sometimes used to refer to ending a chain entirely (as mentioned with Lisk).

Leverage (or margin) — Borrowing money to trade a larger position than you can afford outright. For example, 10x leverage means you control 10 times the amount of collateral you put down. It magnifies both gains and losses.

Liquidation — When a leveraged position loses so much value that the exchange automatically sells it to recover the borrowed money. The trader loses their collateral.

Mark price — The fair price of a futures contract calculated by the exchange using spot prices across venues, index prices, and time decay. It's used to calculate whether a leveraged position should be liquidated. It differs from the last trade price to prevent manipulation.

Open interest (OI) — The total number of unfilled futures contracts (longs + shorts) across all traders on an exchange. Rising OI suggests new leverage is entering the market; falling OI suggests positions are being closed.

Perpetual contract (or perpetual swap) — A futures contract with no expiration date that lets you bet on price direction with leverage. You pay or receive funding periodically to stay long or short.

Short (or short position) — A bet that a price will fall. If you short Bitcoin at \$76,000 and the price drops to \$75,000, you profit. If it rises to \$77,000, you lose.

Short squeeze — A sharp price rally caused by traders who shorted a token being forced to buy to close their bets (to avoid liquidation), which pushes the price even higher and forces more shorts to liquidate—a feedback loop.

Stablecoin — A cryptocurrency designed to maintain a stable price—usually pegged 1:1 to the US dollar or another fiat currency. USDC (run by Circle) and USDT (run by Tether) are major examples.

Staking — Locking up crypto tokens to earn rewards. On some blockchains, stakers help secure the network and earn new tokens as payment. On exchanges like Coincheck, staking is a simpler concept: you hold a token and the exchange pays you interest.

Trading volume — The total dollar (or coin) amount traded on an exchange in a given time period. High volume suggests active trading and good liquidity; low volume suggests fewer buyers and sellers.

USDC — A stablecoin issued by Circle that holds a 1:1 value with the US dollar. It's backed by US treasury bills and bank deposits.

Venue — An exchange or marketplace where crypto futures are traded. This report covers Binance, Bybit, OKX, Bitget, and Gate.
