02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

07 · GLOSSARY

CS Gorkem T
CS Tarik O

Every term used today, in plain words

Funding rate — A payment that traders making leveraged bets exchange every 8 hours on futures contracts. Positive rate means long traders pay short traders, signaling the market expects prices to go higher.

Long/short ratio — A count of traders betting on price rises (long) versus price drops (short). Above 1 means more longs; below 1 means more shorts.

Mark price — The current reference price used to calculate profits and losses on futures contracts, designed to prevent large gaps between futures and spot prices.

Market breadth — The percentage of all cryptocurrency markets that rose versus fell in a given period. High breadth (e.g., 77% up) signals broad strength.

Open interest — The total amount of money currently locked in leveraged positions on futures contracts. Rising open interest means traders are adding leverage; falling means they are closing positions.

Open-interest change — The percentage increase or decrease in open interest over a time period. It shows whether traders are becoming more or less bullish on leverage.

Stablecoin — A cryptocurrency designed to maintain a fixed value (usually $1 USD) by being backed by real dollars held in a bank.

Taker buy/sell ratio — A measure of buying versus selling aggression. Ratio above 1 means more aggressive buying; below 1 means more aggressive selling.

Top-trader position ratio — The long-to-short ratio among only the largest traders, revealing whether institutional money is leaning bullish or bearish.
