02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 23:00 UTC), not daily figures.

Bitcoin traders held a bullish long-to-short bias of 2.57:1 across all accounts and 1.87:1 among the largest traders, with funding positive at 3.16% annualized on Binance. Bitcoin open interest rose 0.48% in USD terms despite a slight decline in coins held. Ethereum showed stronger long positioning at 2.64:1 on Binance but carried negative funding of -1.49% annually, signaling caution on further upside. Both assets saw modest taker buy pressure (1.02 and 1.05 ratios respectively), and 70.4% of Binance perpetual contracts closed up for the day, reflecting broad strength despite sharp intraday volatility tied to election uncertainty and hack liquidations. Market sentiment remained fearful (26 on the Fear & Greed Index, down from 37 the prior day).

THE THREE THAT MATTERED MOST

Binance reveals hack attack vector: fake job interviews used to compromise developer credentials

Binance disclosed operational details of the Oct 31–Nov 1 $6.34 billion breach on Nov 3. Attackers posed as recruiters, used fake job interviews to deliver malicious code through coding assignments, then exploited stolen deployment credentials to access wallet signing systems. The exchange had covered 98% of affected assets and launched withdrawal phase 2 at 04:00 GMT Nov 3. Net outflows declined from a $7B peak to $3.5B by day's end, and the deposit-to-withdrawal ratio recovered to 78%, signaling stabilization.

Crypto markets show sharp intraday volatility on election day; over $200M in leveraged longs liquidated

During Nov 3 election day voting, cryptocurrency markets experienced sharp intraday moves tied to election-result uncertainty and the ongoing Binance hack discourse. Bitcoin retreated to below $77,000 in early Asia trading (down >1% in under 2 hours) with over $200 million in leveraged long positions liquidated, before recovering as voting progress eased concerns. By early evening Nov 3, BTC had recovered and the market closed higher for the day.

Mercado Bitcoin breach adds second exchange hack to Nov 3 risk narrative; $46 million stolen

Brazilian cryptocurrency exchange Mercado Bitcoin fell victim to a $46 million attack on Nov 3 UTC, suspending deposits and withdrawals while the company stated it would cover all losses. The breach occurred the same day election voting was underway and as market participants were still absorbing the Binance hack details, heightening security concerns across the sector.

HACKS, EXPLOITS AND OUTAGES

Binance hack attack vector revealed: fake job interviews and malicious code in coding assignments

Binance disclosed on Nov 3 that the $6.34 billion breach used social engineering and targeted developers. Attackers impersonated recruiters, delivered malicious code through fake job interview coding tasks, and exploited stolen credentials to access wallet signing systems. By Nov 3 UTC, 98% of affected assets were covered and withdrawal phase 2 had launched, stabilizing the market.

07 · GLOSSARY

CS Gorkem T
CS Tarik O

Every term used today, in plain words

Basis (trading) — The price difference between the current market price (spot price) and the futures price for the same asset.

Breadth — The percentage of assets in a market that are moving up or down in price; high breadth (e.g., 70% of coins up) suggests strong market-wide sentiment.

Fear & Greed Index — A sentiment indicator ranging from 0 (Extreme Fear) to 100 (Extreme Greed) that measures cryptocurrency market emotion based on volatility, momentum, and social media trends.

Funding rate — A periodic payment between long and short traders on perpetual futures, designed to keep the contract price close to the spot price. Positive funding means longs pay shorts; negative means shorts pay longs.

Liquidation — Forced closure of a leveraged position when collateral drops below the exchange's minimum requirement; common in derivatives markets where a price move against a trader wipes out their margin.

Long/short ratio — The ratio of traders holding long positions (betting price will rise) to those holding short positions (betting price will fall); ratios above 1.0 indicate more bullish positioning.

Mark price — The reference price used to calculate funding and liquidations on futures exchanges, typically a weighted average of spot prices or index-based price.

Open interest (OI) — The total value of all outstanding long and short positions in a futures market; growth in OI suggests increasing leverage and potential volatility.

Open interest change — The day-over-day percentage shift in total open interest, indicating whether traders are adding or reducing positions collectively.

Perpetual futures — Futures contracts with no expiry date, allowing traders to hold leveraged long or short positions indefinitely as long as they maintain collateral and pay funding rates.

Taker buy/sell ratio — The ratio of market buy orders to sell orders; ratios above 1.0 indicate more aggressive buying by takers (traders accepting current ask prices).

Top position ratio — The long-to-short ratio among the largest traders on an exchange, indicating whether the biggest players are leaning bullish or bearish.
