Bitcoin held steady around $82,920 and Ethereum around $2,447 across all five major exchanges (Binance, Bybit, OKX, Bitget, Gate)—prices matched closely. Binance led trading volume: $11.4 billion for Bitcoin and $8.4 billion for Ethereum, with total market volume strong across the board.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

Funding rates were high (Bybit 10.95%, Binance 7.16% for Bitcoin), signaling traders betting heavily on prices rising. Long/short positioning showed strong bullish lean: among the largest Bitcoin traders, 1.83 longs per short, and among large Ethereum traders, 1.68 longs per short. Taker buy/sell ratios slightly favored aggressive buyers (Bitcoin 1.047, Ethereum 1.037). Open interest on Bybit rose 4.07%, meaning traders were adding borrowed money to bullish positions. Market breadth was very strong: 83.86% of Binance perpetual contracts were up on the day, showing broad-based strength.

THE THREE THAT MATTERED MOST

BlackRock's Bitcoin ETF Records Biggest Inflow Since October 2025

BlackRock's IBIT Bitcoin ETF pulled in $665.16 million on Monday, October 19, marking the largest single-day inflow in nearly a year. US spot Bitcoin ETFs saw net inflows of $527 million overall, with most buying coming from BlackRock, while Fidelity and Grayscale posted modest outflows. This signals institutional appetite returning despite macro uncertainty.

Drift Protocol Attacker Washes $61M Ethereum Through Tornado Cash

A wallet tied to the April 2026 Drift Protocol hack ($295 million total loss, attributed to North Korean threat actors) deposited 25,700 Ethereum (~$61 million) into the Tornado Cash mixer on October 20, completing the transfer in two hours after two months of dormancy. The attacker still controls approximately $194 million in stolen funds. The move complicates recovery efforts and highlights ongoing security risks.

INSTITUTIONAL FLOWS AND ETFS

Ethereum ETFs Extend Outflow Streak to Four Days, Contrasting Bitcoin Buying

Spot Ethereum ETFs posted net outflows of $103.3 million on October 19, extending a losing streak to four consecutive days. October 2026 year-to-date saw net outflows exceeding $950 million on Ethereum ETFs, even as Bitcoin ETFs attracted institutional money. The divergence suggests a more guarded institutional outlook on Ethereum relative to Bitcoin.

07 · GLOSSARY

CS Gorkem T
CS Tarik O

Every term used today, in plain words

Basis — The time period or reference used for measuring price changes. 'UTC-day' means a full calendar day in Coordinated Universal Time (UTC), 00:00–23:59.

Breadth — The percentage of assets moving up vs. down on the day. 83.86% up means that on Binance perps, about 84 out of 100 contracts closed higher than they opened, showing market-wide strength.

Fear & Greed Index — A sentiment score from 0 (extreme fear) to 100 (extreme greed) that measures overall crypto market psychology. 55 is 'greed'—investors are optimistic but not panicking.

Funding rate — A periodic payment between traders on perpetual futures. When funding rates are positive, bullish traders (longs) pay bearish traders (shorts) to hold their positions, signaling strong bullish sentiment. Higher rates mean more bullish confidence.

Long/short ratio (account-level and top-position ratio) — Comparison of bullish accounts (betting price goes up) to bearish accounts (betting price goes down). A ratio above 1.0 means more bulls than bears. 1.83 means 1.83 bulls for every 1 bear. 'Top-position ratio' focuses on the largest traders; 'account-level' includes all traders.

Mark price — The reference price used to calculate funding on perpetual futures, derived from the spot price and forward curve. It prevents manipulation and marks unrealized gains/losses on open positions.

Open interest (OI) — The total dollar value of all open positions (longs and shorts combined) on a perpetual futures market. Increasing OI means traders are adding leverage to the market; declining OI means positions are being closed. 'OI change' shows how much this grew or shrank during the day.

Perpetual futures (perps) — A type of cryptocurrency derivatives contract with no expiration date. Traders can hold a bullish or bearish position indefinitely as long as they meet margin requirements. They track the spot price closely via funding rates and mark price.

Taker buy/sell ratio — The ratio of aggressive buy orders (market buys that take liquidity) to sell orders. Above 1.0 means more aggressive buying; below 1.0 means more aggressive selling. Indicates short-term momentum direction.

Volume (quote basis) — The total dollar value of all contracts traded in a given period (versus 'base volume,' which counts coins). 'Quote basis' means the dollar amounts are summed; higher volume indicates more trading activity and liquidity.
