BEARISH

2026-11-11 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Bitcoin and Ethereum held steady near $74,000 and $2,056 as traders weighed weak ETF demand against large-wallet accumulation, while a $14.2 billion stablecoin withdrawal—the biggest since 2022—exposed the market's shrinking purchasing power.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

Funding rates showed modest bullish pressure—Bitcoin at 3.8% annualized on Binance and Ethereum at 6.4%—indicating traders betting on up moves paid small fees. Open interest fell slightly on Bitcoin (down 2.3% on Bybit) but rose on Ethereum (up 0.4% on Binance), showing mixed conviction. Market positioning remained stretched long: Bitcoin's long-to-short ratio of 2.96 and Ethereum's 3.52 were heavily bullish, but the largest traders (top position ratio 2.23 for Bitcoin) were less bullish than the broader market. Intraday selling pressure was evident: taker buy/sell ratios fell below 1.0 for both (0.93 for Bitcoin, 0.90 for Ethereum), meaning aggressive sellers outnumbered buyers. Market breadth was weak at only 33.6% of Binance perpetuals up on the day, signaling broad-based selling.

Asian semiconductor stocks surged, likely signaling demand recovery: SK Hynix jumped 6.7%, Samsung Electronics 5.8%, and Zhongji Innolight in Hong Kong leapt 17.3%. Leveraged semiconductor ETFs followed, with CSOP SK Hynix 2x up 12.6% and CSOP Samsung 2x up 10.4%. This strength reflected optimism after CoreWeave reported 168% revenue growth earlier in the day, boosting AI infrastructure sentiment. US stocks also rose (S&P 500 +1.3%, Nasdaq +1.6%), but gold and bonds fell slightly, suggesting a risk-on tone that did not fully lift crypto.

THE THREE THAT MATTERED MOST

Stablecoin Supply Drops $14.2 Billion in Largest Contraction Since 2022 Bear Market

Total stablecoin supply fell $14.2 billion over the past 30 days, the largest decline since the 2022 crypto downturn, according to Glassnode. USDT and USDC together shed nearly $11 billion as holders redeemed stablecoins for dollars and withdrew cash from the crypto market. Analysts warn the shrinking supply leaves less purchasing power available for a market recovery.

Initia Blockchain Halted After Second Hack in Three Weeks: $3.3 Million Lost

The Initia Layer 1 blockchain stopped operations on November 10 after unauthorized transfers from escrow accounts cost the network $3.3 million. This marks the second major security incident in less than three weeks, following a $2.7 million loss from a script caching bug on November 2. The repeated hacks raised questions about operational security.

07 · GLOSSARY

CS Gorkem T
CS Tarik O

Every term used today, in plain words

ETF (exchange-traded fund) — An investment fund that holds Bitcoin, Ethereum, or other assets and trades on a regular stock exchange. When investors buy an ETF, they own a share of the underlying asset without holding it directly. Inflows mean new money is buying; outflows mean money is being withdrawn.

Funding rate — A periodic payment between traders with long and short positions on perpetual futures contracts. Positive rates mean long traders pay shorts, encouraging shorts to open. Negative rates mean shorts pay longs, encouraging longs to open. Higher rates suggest the market is more confident about price increases.

Long-to-short ratio (long/short ratio) — The number of traders betting prices will go up (longs) divided by the number betting prices will go down (shorts). A ratio of 2.9 means 2.9 longs for every 1 short—a bullish market structure. Ratios above 2.0 are considered very bullish; below 1.0 is bearish.

Mark price — The reference price used for settling perpetual futures contracts. It is calculated to prevent extreme moves and is usually close to the spot price (the price on regular exchanges).

Market breadth — The percentage of assets in a market that are moving up versus down on a given day. A breadth of 33.6% up means about one-third of Binance's perpetual contracts rose, while two-thirds fell—a sign of broad selling.

Open interest — The total number of contracts (or coins' worth of contracts) still open and unsettled on a futures exchange. An increase suggests traders are opening new positions; a decrease suggests positions are being closed or liquidated.

Open-interest change (OI change) — The percentage shift in open interest over a period (usually 24 hours). A decline of 2.3% means the total amount of unsettled positions fell—traders are exiting or being forced out.

Stablecoin — A cryptocurrency designed to maintain a stable value, usually pegged to the US dollar at $1. Examples include USDT (Tether) and USDC (Circle). They are used as cash in crypto markets.

Taker buy/sell ratio — A measure of aggressive buying versus aggressive selling in the immediate price action. A ratio of 1.0 means equal aggressive buying and selling. Above 1.0 favors buyers; below 1.0 favors sellers. A ratio of 0.93 means sellers are slightly more aggressive.

Top position ratio — The long-to-short ratio among the largest traders on an exchange, not all accounts. Provides insight into what the biggest money is doing, separately from retail traders.
