Bitcoin fell 2.08% to 73,759.90, Ethereum fell 3.83% to 2,052.11. All five major exchanges (Binance, Bybit, OKX, Bitget, Gate) showed nearly identical price declines, with Binance leading volume at $12.4 billion in BTC trading and $9.6 billion in ETH.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 02:00 UTC), not daily figures.

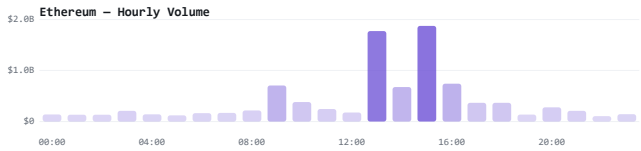

Bitcoin had positive funding at 10.6% annualized, but Ethereum's funding went negative at -4.87% on Binance, meaning short sellers paid longs—a sign traders expected lower prices. Both coins had more long positions than short (Bitcoin 2.77-to-1, Ethereum 3.81-to-1), but the largest traders were less bullish (top position ratios 2.265 for Bitcoin, 1.908 for Ethereum). Open interest fell on both coins (Bitcoin -1.12%, Ethereum -2.43%). Only 44% of Binance perps closed higher on the day. Taker buying showed slight strength on Bitcoin (1.037 ratio) but selling pressure on Ethereum (0.963 ratio).

THE THREE THAT MATTERED MOST

US inflation beat forecasts, driving Bitcoin below $74,000

October CPI came in at 0.4% headline (forecast 0.3%) and 0.3% core (forecast 0.2%), hotter than expected. This increased bets on bigger Fed rate hikes, pushing Bitcoin and Ethereum down sharply. Analysts flagged support levels at $73,000 and potential moves toward $70,000.

07 · GLOSSARY

CS Gorkem T

CS Tarik O

Every term used today, in plain words

Annualized funding rate — The yearly return traders pay to each other on perpetual futures contracts. Positive rates mean longs pay shorts; negative means shorts pay longs. Expressed as a percentage of the position value per year.

Basis — The price difference between a futures contract and the spot price of the underlying asset. Used here to denote the trading pair (e.g., UTC-day basis for 24-hour open-high-low-close).

Breadth — The percentage of all tradable contracts that closed higher on the day. High breadth (above 50%) means the market is broadly strong; low breadth (below 50%) means weak.

Fear & Greed Index — A 0–100 sentiment gauge tracking fear (low values) and greed (high values) in the crypto market. Values below 50 signal fear; above 50 signal greed.

Funding rate — The periodic payment between long and short traders on perpetual contracts to keep the futures price close to the spot price. High rates suggest heavy long positioning.

Long position — A bet that an asset's price will go up. A trader holding a long position makes money if the price rises.

Long/short ratio — The number of long contracts divided by short contracts. A ratio above 1 means more bullish positioning; below 1 means more bearish positioning.

Mark price — The reference price used to calculate gains or losses on perpetual futures contracts, usually a weighted average of spot and futures prices. Used to prevent manipulation.

Open interest (OI) — The total value of all outstanding futures contracts on an exchange. Rising OI often signals new money entering; falling OI suggests positions being closed.

Open-interest change — The percentage increase or decrease in open interest from the start to the end of a trading period. Helps identify whether new positions are being added or positions are being closed.

Short position — A bet that an asset's price will go down. A trader holding a short position makes money if the price falls.

Taker buy/sell ratio — A measure of aggressive buying vs. selling. Above 1.0 means more aggressive buyers (bullish); below 1.0 means more aggressive sellers (bearish).

Top position ratio — Among the largest traders on an exchange, the ratio of long to short positions. Signals what the 'smart money' is betting on.

Volume — The total value of assets traded in a period, measured in USD. Higher volume suggests more trading activity and typically more liquid price discovery.
