All five major venues (Binance, Bybit, OKX, Gate, Bitget) agreed tightly on BTC price between $81,900–$81,916 and ETH between $2,406–$2,407. Binance led volume decisively, trading $10.6B on BTC and $6.7B on ETH, approximately double the next-largest venue on each asset.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

BITCOIN

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

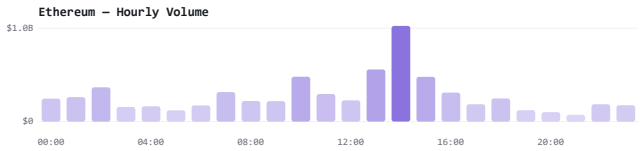

Bitcoin funding remained positive at 1.01% annualized on Binance—a modest signal that leveraged longs slightly outweigh shorts. Open interest fell 0.33%, indicating deleveraging. The long/short account ratio was 1.76 and the top trader ratio 1.77, meaning both retail and institutional traders were heavily long. Taker buy/sell ratio stood at 1.02, showing slightly more aggressive buying than selling. Ethereum funding was lower at 0.58% annualized; open interest rose 0.64%, and the long/short ratio hit 3.40—an extreme long lean. Market breadth showed 59% of Binance perps closing higher. These numbers suggest institutional conviction persists despite the minor price decline.

07 · GLOSSARY

Every term used today, in plain words

Adoption — When more people or companies start using or accepting cryptocurrency.

Annualized — Expressed as a yearly rate. A funding rate of 0.5% per 8-hour period annualized becomes much higher when compounded over 365 days.

Bitcoin — The original and largest cryptocurrency, created in 2009. Often used as the primary reference asset for crypto markets.

Blockchain — The underlying technology behind cryptocurrencies—a decentralized ledger that records transactions across many computers.

Breadth — The percentage of cryptocurrency markets moving up vs. down on a given day. High breadth (e.g., 59% up) suggests broad participation in gains.

Deleveraging — When traders reduce borrowed funds or close leveraged positions, often forcing price moves downward when many do so at once.

ETF (Exchange-Traded Fund) — A fund that holds cryptocurrency or commodities and trades on a stock exchange like a regular stock. Allows people to own crypto exposure without managing private keys.

Ethereum — The second-largest cryptocurrency by market value, known for supporting smart contracts and decentralized applications.

Funding rate — A periodic payment (typically every 8 hours) between long and short traders on futures contracts. Positive rates mean long traders pay short traders, signaling optimism; negative rates go the other way.

Institutional — Large organizations like banks, investment firms, or corporations (as opposed to individual retail traders).

Leverage / leveraged — Borrowing money to make a larger bet. Amplifies both gains and losses.

Liquidation — When a leveraged position is forcibly closed due to losses exceeding the trader's initial margin.

Long / long position — A bet that an asset's price will rise. A long trader profits if the price goes up.

Long/short ratio — The proportion of traders betting that prices will rise (longs) versus those betting prices will fall (shorts). A ratio above 1 means more longs than shorts.

Mark price — The current price used by a futures exchange to calculate profit and loss on derivatives positions. It may differ slightly from the spot price.

Open interest — The total notional value of all futures positions open at a given time. Rising open interest suggests traders are adding new positions; falling open interest means positions are closing.

Perpetual futures / perps — Derivative contracts that never expire, allowing traders to bet on price movements with leverage. Settlements happen via the funding rate.

Short / short position — A bet that an asset's price will fall. A short trader profits if the price goes down.

Stablecoin — A cryptocurrency designed to maintain a stable value, usually pegged to the US dollar (e.g., USDC, USDT, USAT).

Taker buy/sell ratio — The fraction of market orders (takers) that are buys versus sells. A ratio above 1 means more aggressive buying than selling.

Token — A digital asset built on a blockchain. Some tokens represent cryptocurrencies; others represent access to platforms or shared ownership.

Top trader / top position ratio — The long/short balance among the largest traders on an exchange. Signals what big money is betting on.

Treasury (crypto treasury) — Holdings of cryptocurrency kept on a corporation's balance sheet as an asset, similar to cash reserves.

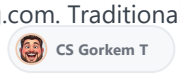

Venue — A cryptocurrency exchange or trading platform (e.g., Binance, Bybit, OKX).
