All five major exchanges (Binance, Bybit, OKX, Bitget, Gate) showed nearly identical Bitcoin and Ethereum prices throughout the day, with Binance leading volume at $8.97 billion in BTC trading and $7.48 billion in ETH. Bitcoin fell 1.94% to $76,791 and Ethereum dropped 0.94% to $2,252.80.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 23:00 UTC), not daily figures.

Despite the price decline, Bitcoin's open interest rose 1.93% as traders added long-side leverage—a sign of conviction to buy below $77,000. Ethereum's open interest fell 2.01% as some longs were cleared. Both assets carried extreme funding rates of 10.95% annualized, well above normal levels, signaling heavy overleveraging to the upside. Bitcoin's top traders held a 1.67× long-to-short ratio and the taker buy/sell ratio stood at 1.05, showing slight buying aggression. Remarkably, 70% of all Binance perpetuals traded higher on the day despite major coins declining—a classic sign of money rotating into smaller altcoins. The Fear & Greed index ticked up to 37 (Fear level) from 34, reflecting ongoing unease after the exchange hack.

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

Binance's $6.3 billion hack began with fake job interviews and exploitation of internal AI tool

On November 3, Binance released a detailed incident report showing North Korean-linked attackers spent months compromising employee credentials via fake recruitment interviews. They then exploited a compromised internal AI tool to access the hot-wallet signing infrastructure (via Ethereum's EIP-7702 delegation mechanism), stealing over $6.3 billion in crypto. Binance said it has since replaced 90% of stolen assets.

CFTC approves stock perpetual futures for US trading, bringing crypto-native products to Wall Street

On November 3, the US Commodity Futures Trading Commission approved equity perpetual futures on regulated US exchanges. This extends a trading product native to crypto markets—perpetuals allow leverage with no expiration and financing between long and short traders. The move gives US traders a regulated alternative to offshore venues.

CZ warns of AI-driven cyberattacks, calls for industry-wide crypto security alliance

In his first interview since the Binance hack, Changpeng Zhao stated on November 3 that artificial intelligence is accelerating the pace and sophistication of cyberattacks across the crypto sector. He called for an industry security alliance to coordinate response and share threat intelligence, signaling that the Binance breach is likely the start of a wave of AI-powered attacks.

07 · GLOSSARY

Every term used today, in plain words

Breadth — The percentage of individual coins trading higher versus lower on the day; high breadth indicates broad-based buying across the market.

Fear & Greed Index — A sentiment gauge ranging from 0 (extreme fear) to 100 (extreme greed); values below 50 indicate market pessimism.

Funding rate — The periodic interest rate paid between perpetual futures traders; when high and positive, long-position holders pay short-position holders, indicating the market is overleveraged with bulls.

Long/short ratio — The proportion of traders holding bullish (long) positions versus bearish (short) positions; above 1 means more bulls than bears.

Mark price — The reference price used to calculate funding payments and liquidations on perpetuals; derived from a mix of spot prices across venues.

Open interest — The total number of outstanding futures contracts at an exchange, measured in either coins or dollars; rising open interest means traders are adding leverage.

Open-interest change — The percentage increase or decrease in total outstanding futures over a trading day; indicates whether the market is becoming more or less leveraged.

Overleveraged — When traders have borrowed more money than prudent relative to their actual assets; increases the risk of forced liquidations if prices move against them.

Perpetual futures (Perpetuals) — Futures contracts without expiration dates, allowing traders to hold leveraged positions indefinitely; prices are kept in line with spot markets via a 'funding rate' payment between longs and shorts.

Taker buy/sell ratio — The ratio of market-taking buy orders to market-taking sell orders; above 1 indicates more aggressive buying, below 1 indicates more aggressive selling.

Top-trader long/short ratio — The ratio of long to short positions held by the largest traders on an exchange; indicates directional bias of institutional money.
