Bitcoin closed at $81,384 (down 3.17% to 3.18% across venues) and Ethereum at $2,388 (down 3.42% to 3.43%). Binance led volume by far, with $14.5 billion in Bitcoin and $8.7 billion in Ethereum trading—higher than all other venues combined.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 03:00 UTC), not daily figures.

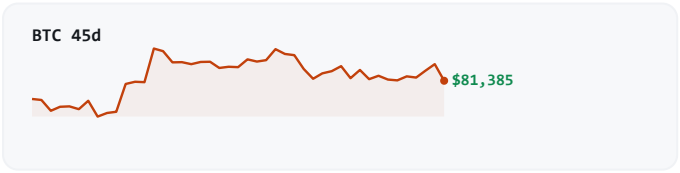

Funding rates remained positive across all venues (0.573% to 1.04% annualized for Bitcoin, 0.33% to 1.10% for Ethereum), signaling traders still expected prices to stay elevated. However, open interest fell 2–5% as some traders closed positions. The largest traders on Binance held 1.65x more long (buy) positions than short (sell) positions on both Bitcoin and Ethereum, which normally supports prices, but buying pressure was only slightly above selling. The taker buy-to-sell ratio showed balanced activity on Ethereum (1.0048) and slight buying pressure on Bitcoin (1.0661). Market breadth was very weak: only 17.8% of Binance perpetual contracts went up, while 82.2% fell. Fear & Greed rose to 68 (Greed), up from 63 the prior day, suggesting some traders thought prices were oversold.

Funding Rate (annualised)

THE THREE THAT MATTERED MOST

Tech stock selloff deepens amid AI spending concerns; crypto split between flows and prices

The Nasdaq Composite fell 2.60% on October 22 as Meta, Tesla, and chipmakers disappointed on earnings and AI spending outlook. S&P 500 dropped 1.21%. Despite the broad selloff, Bitcoin spot ETFs recorded a strong $528 million net inflow—led by BlackRock's IBIT (+$235M) and Fidelity's FBTC (+$213M)—while Ethereum ETF flows turned flat. This suggests institutional investors viewed the crypto dip as a buying opportunity rather than a risk-off moment.

Coinbase Ireland hit with €3.25 million fine for customer fund safeguarding failures

Ireland's Central Bank fined Coinbase Ireland for failing to properly segregate customer funds and maintaining underfunded safeguarding accounts. The fine stemmed partly from 2023 instructions that directed customers to deposit into alternate accounts during Silvergate's collapse. Coinbase acknowledged the facts and agreed to accept sanctions.

07 · GLOSSARY

CS Gorkem T
CS Tarik O

Every term used today, in plain words

Breadth (market breadth) — The percentage of assets in a market that moved up for the period. Low breadth (18% up on Oct 22) means most coins fell, a sign of broad weakness.

Fear & Greed Index — A 0–100 scale measuring market sentiment. Greed (above 50) means traders are optimistic; Fear (below 50) means pessimistic. Used to spot potential reversals.

Funding rate — An interest rate traders pay (or receive) when holding positions in perpetual contracts. Positive funding means buyers are paying sellers to hold longs; it is annualized as a percentage yield.

Long / Short position — A long bet means the trader expects the price to rise; a short bet means they expect it to fall. A long/short ratio above 1.0 means more traders are long than short.

Mark price — An exchange's calculated fair price for a perpetual contract, used to trigger liquidations and prevent manipulation. It differs slightly from the last-traded price.

Open interest — The total number of unfilled contracts (longs + shorts combined) in a market. High open interest means large positions are at risk; falling open interest means traders are closing positions.

Open interest change — The percentage change in total open contracts over the period. A decline means traders are de-risking; an increase means they are taking more risk.

Taker buy/sell ratio — The ratio of aggressive market-taker buys (those paying ask price) to market-taker sells (those hitting bid price). A ratio above 1.0 means more aggressive buying; below 1.0 means more aggressive selling.

Top position ratio — The long-to-short ratio among the largest traders on an exchange. A high ratio (e.g., 1.65) indicates the biggest money is bet on prices rising.
