

DAILY MARKET REPORT

Monday, 28 September 2026

NEUTRAL / MIXED

2026-09-28 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate

THE DAY IN ONE LINE

On Monday, September 28, Bitcoin fell 1.2% and Ethereum was essentially flat as traders dealt with a major exchange hack, rising Treasury yields from geopolitical tensions, and weak market breadth, though some large institutions bought Bitcoin anyway.

01 · PRICE & VOLUME

What every venue's price and volume did

The same two contracts on every exchange, for this UTC day. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

BITCOIN (BTC PERPETUAL)

\$83,461.00 -1.15% \$82,468.00 — \$84,974.90

Spread: **\$3.90** (0.0%) Total volume: **\$34.19B**

Binance		\$13.13B	38%
OKX		\$6.91B	20%
Gate		\$6.08B	18%
Bybit		\$5.27B	15%
Bitget		\$2.80B	8%

ETHEREUM (ETH PERPETUAL)

\$2,687.55 +0.01% \$2,633.50 — \$2,720.40

Spread: **\$0.23** (0.0%) Total volume: **\$27.47B**

Binance		\$9.72B	35%
OKX		\$7.21B	26%
Gate		\$5.72B	21%
Bybit		\$3.16B	11%
Bitget		\$1.66B	6%

Bitcoin fell 1.2% with all major exchanges consistent around \$83,089 mark price. Binance led volume significantly with \$13.1 billion in 24-hour perpetual trading, roughly double that of other exchanges.

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

BITCOIN

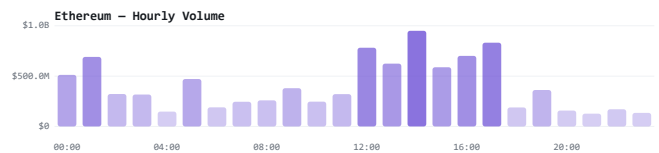

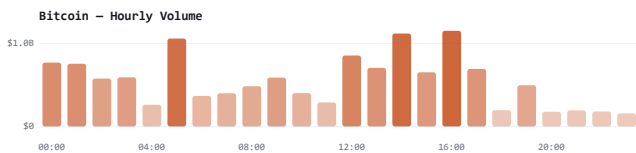

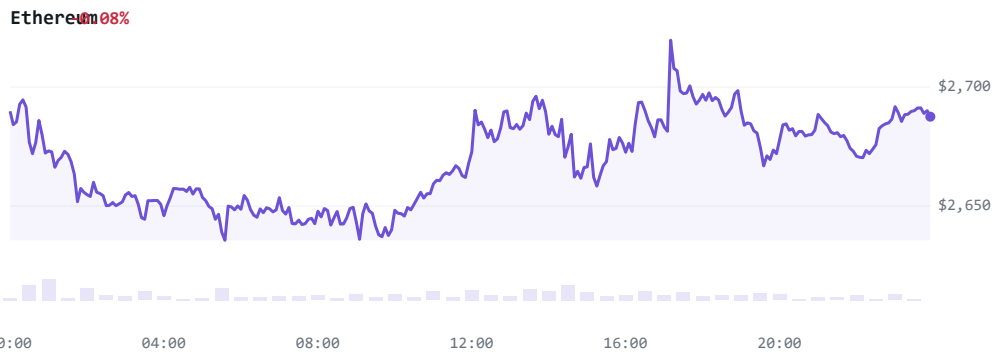

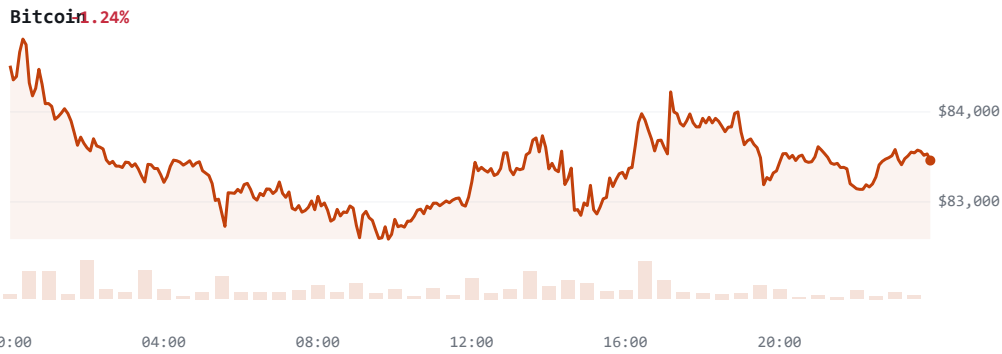

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bybit	—	—	—	—	—	—	—
Binance	—	—	—	—	—	—	—
OKX	—	—	—	—	—	—	—
Bitget	—	—	—	—	—	—	—
Gate	—	—	—	—	—	—	—

ETHEREUM

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bybit	—	—	—	—	—	—	—
OKX	—	—	—	—	—	—	—
Binance	—	—	—	—	—	—	—
Bitget	—	—	—	—	—	—	—
Gate	—	—	—	—	—	—	—

Funding, open interest and mark price are point-in-time (as of 23:59 UTC), not daily figures.

Bitcoin's funding rate on Binance reached 6.3% annualized—money traders paid to hold long bets—showing continued bullish positioning despite the price decline. Open interest fell 2.6% in dollar terms, mostly from long positions being closed and liquidated. The typical trader was more long than short (1.17-to-1), but the very largest traders were even MORE long (1.89-to-1), suggesting big money still believed in Bitcoin. However, aggressive sellers (takers selling immediately to market) outnumbered aggressive buyers 0.95-to-1, a clear sign of heavy selling pressure. Market breadth was very weak: only 19% of Binance perpetual contracts were up; 81% were down, a deeply bearish signal.

03 · BIGGEST MOVERS

The coins that moved the most

The largest moves on Binance for this UTC day, with the reason where the news supports one.

No standout movers today.

04 · STOCKS & COMMODITIES ON BINANCE FUTURES

Equities and commodities traded on Binance

Binance lists tokenised perpetuals for stocks (Korea, Hong Kong, China and the US) and commodities. The perp trades nearly around the clock, but the underlying market is open only a few hours — when it was closed, that is noted instead of showing drift as a daily move.

Stock & commodity data was unavailable this run.

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

Bitget loses \$387 million in major security breach; stolen funds begin moving to other wallets

Bitget, one of the world's largest crypto exchanges, was hacked and \$387.5 million in customer cryptocurrency was stolen. The attacker tested the exchange's security with small transfers before running the main drain. Bitget halted all withdrawals, then reopened Bitcoin withdrawals first. Within hours, approximately 5,000 Bitcoin (worth roughly \$415 million at the time) had moved out of the exchange as the hacker began laundering the stolen funds.

Trump rejects Iran ceasefire plan; oil climbs above \$100, US Treasury yields hit new cycle high

Escalating geopolitical tensions between the US and Iran sent shockwaves through financial markets. After failed peace talks, oil prices climbed above \$100 per barrel and US 10-year Treasury yields rose to new cycle highs exceeding 5.27%. The shift to safer assets hurt appetite for riskier investments, including cryptocurrency.

Goldman Sachs brings roughly \$100 billion Treasury fund into crypto's institutional infrastructure

Goldman Sachs, one of the world's largest investment banks, began using crypto infrastructure firms to manage its Treasury fund without creating a tokenized version of it. This represents deep institutional integration of crypto platforms for traditional finance operations, showing that major banks now rely on crypto infrastructure as essential plumbing.

REGULATION AND POLICY

SEC follows CFTC in offering staff guidance on cryptocurrency regulation

Following the failure of the CLARITY Act to pass in Congress, the SEC announced updated staff guidance on how existing federal securities laws could apply to crypto token issuers, similar to guidance the CFTC had already issued. The move signals regulators are setting clearer expectations even without new legislation.

Senate Democrats report: Tether's USDT is a 'lifeline' for Iran's shadow banking system

A new Senate Permanent Subcommittee on Intelligence report alleges that Tether stablecoin (USDT) has become central to Iran's shadow banking network and sanctions evasion. The findings highlight concerns about cryptocurrency use in sanctions circumvention.

Brazil imposes \$10,000 self-custody reporting requirement for crypto transfers

Brazil's central bank authorized financial institutions must now report transfers of cryptocurrency to or from user-controlled wallets (self-custody) when the transfer size meets a \$10,000 threshold. The rule increases surveillance of crypto transactions while respecting self-custody rights.

Chainlink launches CCIP 2.0 bridge technology; institutions gain more control over cross-chain security

Chainlink released version 2.0 of its Cross-Chain Interoperability Protocol (CCIP), giving blockchain applications and institutions the ability to add custom security checks when moving assets between different blockchains. The update comes five months after a rival bridge (Kelp DAO) lost \$292 million to hackers.

HACKS, EXPLOITS AND OUTAGES

THORChain refuses Bitget's request to block hacker; \$6 million ETH converted to Bitcoin

After the Bitget hack, the exchange asked THORChain (a cross-chain liquidity protocol) to block transactions from the hacker's wallet addresses. THORChain declined, maintaining its policy of not censoring transactions based on the source address. During this time, hackers successfully moved approximately 2,390 Ethereum into 75.2 Bitcoin using THORChain's swaps.

Every term used today, in plain words

Bitcoin — The first and most well-known cryptocurrency. A digital currency not issued or controlled by any government, bank, or company. The largest cryptocurrency by market value.

Breadth (market breadth) — On a given day, the percentage of cryptocurrencies trading higher versus lower. For example, if market breadth is 19%, it means only 19% of coins rose while 81% fell—a weak signal.

Cryptocurrency — Digital money that exists only on the internet and blockchain networks. Not issued by governments or banks. Bitcoin and Ethereum are the two largest cryptocurrencies.

Ethereum — The second-largest cryptocurrency by market value. Also a blockchain network that runs computer programs. People can invest in Ethereum or use the network to run decentralized applications.

Funding rate — A payment between traders on futures exchanges, usually every 8 hours. When positive, traders betting the price will rise (longs) pay traders betting it will fall (shorts). A high funding rate means most traders are very bullish and willing to pay to hold long positions.

Liquidation — The automatic forced closure of a trader's leveraged position when they run out of money to maintain it. Liquidations typically happen fast and can push prices lower.

Long position — A bet that an asset's price will increase. A trader holding a long position profits if the price goes up. Opposite of a short position.

Long-to-short ratio — The proportion of traders betting the price will rise compared to those betting it will fall. A ratio above 1 means more bullish traders. A ratio below 1 means more bearish traders.

Mark price — The official price that futures exchanges use for settlements, margin calculations, and liquidations. Usually very close to the actual market trading price.

Open interest — The total number of active futures contracts held by all traders combined. When it decreases, traders are closing positions (less risk in the system). When it increases, traders are opening new positions (more risk in the system).

Perpetual / Perpetual futures (perp) — A type of futures contract with no expiration date. Traders can hold positions indefinitely as long as they have enough money to maintain the position. Different from regular futures, which expire on a specific date.

Short position — A bet that an asset's price will decrease. A trader holding a short position profits if the price goes down. Opposite of a long position.

Taker / Taker order — A trader who accepts the current market price and buys or sells immediately, rather than waiting for a better price. When takers outnumber makers, it usually signals strong selling pressure.

Volume — The total amount of cryptocurrency bought and sold during a specific time period, usually measured in dollars. Higher volume typically means more active trading and more liquidity.
