

**DAILY MARKET REPORT**

Tuesday, 22 September 2026

2026-09-22 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

On September 22, 2026, Bitcoin and Ethereum prices each fell about half a percent to \$86,158 and \$2,752 respectively, despite strong institutional buying pressure including a record Bitcoin ETF inflow day and a major Binance-Circle investment deal.

01 · PRICE & VOLUME

What every venue's price and volume did

The same two contracts on every exchange, for this UTC day. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

BITCOIN (BTC PERPETUAL)

VENUE	CLOSE	CHANGE	HIGH	LOW	VOLUME
Bitget	\$86,150.8	-0.50%	\$86,688	\$85,071.5	\$2.86B
OKX	\$86,167.5	-0.49%	\$86,736.6	\$85,070.2	\$6.53B
Bybit	\$86,168.1	-0.48%	\$86,716.6	\$85,066.3	\$6.15B
Binance	\$86,158.6	-0.49%	\$86,699.9	\$85,080	\$14.56B
Gate	\$86,162.7	-0.49%	\$86,683	\$85,075.1	\$6.77B

ETHEREUM (ETH PERPETUAL)

VENUE	CLOSE	CHANGE	HIGH	LOW	VOLUME
Bybit	\$2,752.84	-0.79%	\$2,777.19	\$2,713.37	\$3.39B
Bitget	\$2,752.11	-0.82%	\$2,777.46	\$2,714.43	\$1.84B
OKX	\$2,752.68	-0.79%	\$2,776.8	\$2,714.02	\$7.31B
Binance	\$2,752.69	-0.79%	\$2,776.64	\$2,714.41	\$10.12B
Gate	\$2,752.51	-0.79%	\$2,776.79	\$2,715	\$6.15B

Bitcoin and Ethereum both slid roughly 0.48–0.49% on the day across all major exchanges, with prices tightly agreed between venues (BTC \$86,150–86,170, ETH \$2,751–2,753). Binance led volume for both assets: BTC with \$14.58 billion (OKX second at \$6.53B) and ETH with \$10.12 billion (OKX second at \$7.31B).

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	MARK
Bitget	+0.5%	\$2.97B	—	—	\$86,166.1
OKX	+2.3%	\$2.62B	—	0.94	\$86,153.4
Bybit	+11.0%	\$5.24B	—	—	\$86,157.54
Binance	+1.1%	\$9.19B	—	0.89	\$86,157.77
Gate	+5.6%	\$5.55B	—	—	\$86,150.53

ETHEREUM

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	MARK
Bybit	+11.0%	\$2.35B	—	—	\$2,751.84
Bitget	+10.3%	\$2.10B	—	—	\$2,752.42
OKX	+9.0%	\$1.64B	—	1.17	\$2,751.74
Binance	+10.3%	\$6.36B	—	2.33	\$2,752.36
Gate	+6.4%	\$3.03B	—	—	\$2,751.48

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

Despite the price decline, Bitcoin saw massive institutional buying: spot Bitcoin ETFs absorbed approximately 11,500 BTC on the day—the largest single-day inflow in nearly two years—while Ethereum ETFs drew \$270 million. Funding rates remained elevated and highly fragmented across venues: Bitcoin's annualized rate ranged from 0.55% (Bitget) to 10.95% (Bybit), and Ethereum similarly ranged from 6.35% to 10.95%, suggesting extreme leverage positioning. Long-short ratios showed mixed sentiment: Binance's Bitcoin ratio of 0.89 leaned toward net shorts, while Binance's Ethereum ratio of 2.33 showed strong net longs. Open interest increased across all venues, indicating positions built on the price decline.

03 · BIGGEST MOVERS

The coins that moved the most

The largest moves on Binance for this UTC day, with the reason where the news supports one.

MUBARAKUSDT +79.7% · \$798M vol · on Binance

CS Gorkem T

Mubarak surged 79.72% to \$0.0787 on \$798 million volume with no clear public cause or news explanation.

CS Tarik O

龙虾USDT -40.4% · \$198M vol · on Binance

The Chinese-named token (龙虾) dropped 40.40% to \$0.13991 on \$198 million volume with no apparent public catalyst.

MARSCOINUSDT +38.8% · \$168M vol · on Binance

Marscoin rallied 38.84% to \$0.14177 on \$168 million volume with no identifiable news or catalyst.

Asian stock markets were mixed on 2026-09-22 UTC. Korean exchanges opened with broad gains: SK Hynix +1.30%, Samsung Electronics +2.01%, KODEX 200 ETF +1.47%. Hong Kong was split, with heavyweight Tencent up 4.71–4.87% but AI names struggling—Zhipu AI -8.14%, MiniMax -5.81%. Oil weakness supported risk appetite: WTI crude fell 2.93% below \$90/bbl and Brent slid 1.85%, helping equities and crypto. US markets were flat: S&P 500 -0.015%, Nasdaq +0.449%, with Gold up 0.15% and US Treasuries unchanged.

05 · MARKET NEWS

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

Binance takes \$100 million Circle stake alongside five-year USDC deal

Binance purchased 1.24 million shares of Circle at \$80.84 each, securing a \$100 million stake below market price at the time. The exchange also expanded its five-year partnership with Circle, which will pay Binance monthly incentive fees based on USDC holdings through Binance's wallet service. Binance cannot sell or transfer the shares for two years.

Spot Bitcoin ETFs absorb 11,500 BTC in their largest buying day in nearly two years

U.S. spot Bitcoin ETFs recorded their biggest single-day inflow in nearly 24 months on September 22, absorbing approximately 11,500 BTC worth roughly \$1 billion. BlackRock's iShares Bitcoin Trust led inflows, with Ark Invest's ARKB and Fidelity's FBTC also drawing substantial capital, signaling strong institutional appetite despite the day's 0.48% price decline.

— 07 · GLOSSARY

Every term used today, in plain words

Basis — The difference between a futures contract price and the spot price of the underlying asset. A positive basis means the futures contract trades above spot; negative basis means it trades below. Used to calculate potential arbitrage opportunities.

Cash-settled — A derivatives contract where profits and losses are paid in cash (usually dollars) at expiration, rather than delivering the physical underlying asset. The contract pays based on the difference between entry price and exit price.

Funding rate — The periodic payment exchanged between long and short traders on perpetual futures contracts to keep the contract price aligned with the spot price. High positive rates mean longs pay shorts; negative rates mean shorts pay longs. Annualized funding rate scales the periodic rate to an annual percentage.

Leverage — Using borrowed capital to increase the size of a trading position beyond what the trader's own money can support. A 10x leveraged position means controlling \$10 for every \$1 of capital risked. Amplifies both gains and losses.

Liquidation — The forced closure of a leveraged trading position when losses reduce the trader's collateral below the minimum required. The position is automatically sold at market price, often triggering additional losses.

Long/short ratio — The proportion of traders holding long positions (betting price will rise) versus short positions (betting price will fall). A ratio above 1.0 indicates more longs; below 1.0 indicates more shorts. Used to gauge trader sentiment.

Mark price — The reference price used on perpetual futures contracts, calculated as a weighted average of prices across multiple exchanges and designed to prevent artificial volatility from thinly-traded spot markets.

Open interest — The total number of open futures or perpetual contracts (measured in coins or dollars) that have not yet been closed. Rising open interest during a price move suggests conviction; falling open interest can signal position unwinding.

Open-interest change — The increase or decrease in the total number of open contracts over a period. Growth in OI during a rally suggests new longs entering; decline suggests position covering or liquidations.

Perpetual futures (perp) — A type of futures contract with no expiration date. Traders hold positions indefinitely, funding each other via funding rates rather than settling at a fixed date. Commonly offered on crypto exchanges.

Spot ETF — An exchange-traded fund that holds actual Bitcoin or Ethereum as collateral, allowing investors to gain exposure without custody risk. Spot ETFs differ from futures-based ETFs because they hold the physical asset.

Stablecoin — A cryptocurrency designed to maintain a fixed price, usually pegged to the US Dollar (1:1). Examples include USDC and USDT. Used as a settlement currency for trading and transfers.

Tokenization / Tokenized deposit — Converting traditional assets (such as bank deposits, stocks, or fiat currency) into blockchain-based digital tokens. A tokenized deposit is a traditional bank deposit recorded as a token on a blockchain, enabling faster settlement and programmable payments.

USDC — USD Coin, a stablecoin issued by Circle Internet Group. Each USDC token is backed by one US Dollar held in reserve, maintaining a 1:1 price peg.

Volume — The total notional value (in dollars) of all trades executed on an exchange or for a given asset over a time period. Higher volume indicates more trading activity and typically tighter bid-ask spreads.
