02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Every term used today, in plain words

Basis — The difference between a futures contract's mark price and the underlying spot price. On crypto exchanges, basis informs traders whether long positions are earning or paying funding.

Funding rate — A periodic fee paid between traders holding long and short perpetual futures positions. Positive funding means longs pay shorts (bullish bias), negative means shorts pay longs (bearish bias). Expressed as a percentage and annualized in this report.

Long/short account ratio — The ratio of all accounts holding long (bullish) positions to those holding short (bearish) positions. Values above 1.0 indicate more bullish traders; below 1.0 indicate more bearish traders.

Mark price — The reference price used to calculate profit and loss on perpetual futures positions, designed to prevent manipulation by averaging the spot price with recent funding mechanics. Differs slightly from the last-traded price.

Open interest — The total number of open contracts (or dollar value of contracts) in a perpetual futures market. Growth indicates new capital entering; decline indicates positions being closed or liquidated.

Open-interest change — The percentage increase or decrease in open interest over a specific period (in this report, the calendar day). Positive change signals bullish leverage accumulation; negative signals de-risking.

Taker buy/sell ratio — The ratio of buy orders that immediately match existing sell orders (aggressive buying) to sell orders that immediately match existing buy orders (aggressive selling). Values above 1.0 favor aggressive buying; below 1.0 favor aggressive selling.

Top-trader long/short ratio — The long/short ratio calculated only for the largest traders and positions, not all retail accounts. Often less extreme than the all-trader ratio, showing the positioning of sophisticated/institutional-scale players.

Venue — A cryptocurrency exchange or trading platform. This report covers five major venues: Binance, Bybit, OKX, Bitget, and Gate.
