All five major exchanges agreed on Bitcoin price within 0.2%, with Binance, Bybit, OKX, Bitget, and Gate all closing between $75,280 and $75,327. Binance dominated volume at $12.3 billion daily futures trading, more than double its nearest peer; this includes highest total volume across exchanges.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

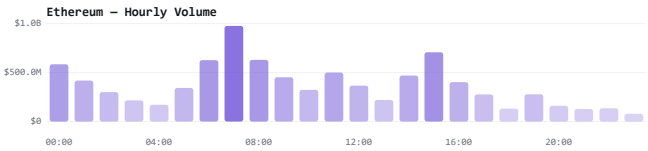

Funding rates split sharply: Binance at 10.95% annualized (expecting prices to rise), but Gate at -50.37% and Bitget near zero, showing no consensus. Open interest fell 0.73% on Bitcoin and 1.6% on Ethereum—traders closing positions instead of adding risk. Large traders leaned heavily long: Binance's biggest accounts were 2.0x more long than short; OKX's ratio reached 2.82. Taker buy/sell ratio on Bitcoin was 0.97 (slightly net selling pressure). Overall, 83.5% of Binance altcoin perps were up, showing broad strength despite spot-ETF outflows of $1.3 billion in Bitcoin and $365 million in Ethereum for the week.

NYSE picks Avalanche for tokenized stock settlement in 24/7 trading platform

Wall Street's Intercontinental Exchange and an affiliated alternative trading system selected Avalanche as the core ledger technology for clearing and settling tokenized securities, launching early 2027. Avalanche will serve as the dedicated blockchain for settlement while ICE handles trade matching. The platform aims to offer 24/7 trading of company shares in tokenized form.

North Korean hackers mint homemade memecoins to launder $6.3 billion Binance hack funds

Blockchain analysis firm Elliptic traced hackers linked to the North Korean Lazarus Group creating six worthless memecoins (with Elon Musk and animal cartoon logos) and routing 117,000 NEAR tokens (~$430,000) through decentralized exchange liquidity pools. The tactic obscures the stolen funds' origin but does not prevent recovery; stolen assets remain traceable on-chain.

Bitmine accumulates 6.07 million ETH amid shift toward Ethereum as store of value

Bitcoin and crypto investment firm Bitmine, led by analyst Tom Lee, announced holdings of 6.07 million ETH (worth $13.56 billion, representing 4.97% of Ethereum's circulating supply)—nearly at its target of 5% of supply. Lee linked the accumulation to Vitalik Buterin's Nov 8 Devcon 8 remarks that Ethereum should be valued as a store of value and financial infrastructure platform, not just a fee-burning token. The milestone signals institutional confidence in ETH as a long-term holding.

Nigeria bars dollar stablecoin issuers from retail access without central bank approval

Nigeria's Central Bank told issuers of US-dollar stablecoins they must secure explicit approval for continued Class 2 retail access, and foreign licenses do not replace the requirement for local issuance authority and token approval. The policy tightens control over offshore stablecoin use in Africa's largest economy.

07 · GLOSSARY

Every term used today, in plain words

Breadth — The percentage of cryptocurrencies in the market that moved up in price on a given day. High breadth (above 80%) signals broad strength across coins; low breadth signals most coins are falling.

Funding rate — The periodic payment between long and short traders on futures exchanges. A positive rate means longs pay shorts (signaling belief prices will rise). An annualized rate shows what that rate equals over a full year.

Long/short ratio — The proportion of traders holding bullish (long) positions versus bearish (short) positions. A ratio above 1 means more traders are betting prices will rise; below 1 means more are betting on a fall.

Mark price — The price used for calculating profits and losses on futures contracts, often a weighted average of recent spot and perpetual futures prices designed to prevent manipulation.

Open interest — The total number of active futures contracts in the market at a given time. Rising open interest means traders are opening new positions; falling open interest means traders are closing positions.

Open-interest change — The percentage increase or decrease in total open contracts over a time period. Falling OI suggests traders are exiting positions and reducing leverage.

Spot ETF inflow/outflow — Movement of investor money into or out of regulated Bitcoin and Ethereum ETFs. Inflows signal institutional demand; outflows signal selling pressure or portfolio rebalancing.

Taker buy/sell ratio — A measure of aggressive buying versus selling. Above 1.0 means more buyers are taking (buying) existing sell orders; below 1.0 means more sellers are taking (selling) existing buy orders.

Top-position ratio — The long/short ratio among the largest-account traders only, not all traders. Signals conviction among institutions and whales.
