Venues showed tight agreement on Bitcoin pricing (range \$82,617–\$82,670 for current price across exchanges). Binance led volume with \$5.63 billion in BTC, followed by OKX at \$3.42 billion. Combined futures volume across all five major venues totaled approximately \$14.7 billion.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	MARK

Gate	-4.2%	\$2.36B	—	—	\$2,638.63

Funding, open interest and mark price are point-in-time (as of 09:44 UTC), not daily figures.

Bitcoin funding rates were split: Bitget, Gate, and OKX showed positive (bullish) funding between 2–11% annualized, but Binance turned negative at -0.49%, signaling some bearish betting. Ethereum funding was more decisively negative across most venues (Bybit -8.71%, Binance -5.36%), indicating stronger bearish sentiment. Open interest for Bitcoin fell slightly (-0.37%) while Ethereum rose 0.20%, showing traders moving out of long Bitcoin bets but into Ethereum. On Binance, BTC showed a modest long bias (1.17 longs per short), while ETH showed strong long dominance (2.76 longs per short).

THE THREE THAT MATTERED MOST

Vitalik Buterin maps Ethereum's shift beyond a blockchain in sweeping 2030 vision

Ethereum co-founder Vitalik Buterin published a roadmap describing Ethereum evolving into a 'cryptographic world computer' by 2030, shifting from forcing every node to repeat calculations to using off-chain proofs. Buterin said Hegota (next year's upgrade) will likely be the last 'normal' fork; everything after involves recursive STARKS, zero-knowledge proofs, and quantum-resistant design.

California Governor Newsom signs memecoin ban (AB 2409), takes aim at Trump

California Governor Gavin Newsom signed Assembly Bill 2409, which prohibits public officials from issuing memecoins (tokens tied to a personality, joke, or trend) and bars digital asset firms from offering such tokens to California residents. The law takes effect January 1, 2027, and Newsom framed it as a rebuke of President Trump's \$TRUMP token.

Scammers steal \$2M in ETH as fake GIWA network fools DYORSWAP

Fraudsters built a counterfeit GIWA blockchain (claiming chain ID 9134, the real GIWA identifier) and tricked DYORSWAP decentralized exchange into listing it as the genuine mainnet. Scammers deposited 767 ETH (~\$2M) and drained 766 ETH before vanishing. GIWA operator Dunamu confirmed its Layer 2 mainnet had not launched and warned users of the fake.

SEC staff guidance: Token buybacks don't make crypto a security if the network works

The SEC published staff guidance clarifying that announcing a token buyback on a functional, decentralized network does not automatically convert the token into a security. The shift loosens the application of securities law for utility tokens with working blockchains.

— 07 · GLOSSARY

Every term used today, in plain words

Altcoin — Any cryptocurrency other than Bitcoin. In this report, altcoins like Solana, Dogecoin, and Chainlink all fell 5–7% on September 27.

Basis — In this report, the time period over which a price change is measured. 'UTC-day' means the change from market open to close on that single UTC calendar day.

Dominance — The percentage of total cryptocurrency market value held by a single coin. Bitcoin dominance of 58.7% means Bitcoin represents nearly 59 cents of every dollar in the total crypto market.

Fear & Greed Index — A sentiment gauge scoring crypto market psychology from 0 (extreme fear) to 100 (extreme greed). A reading of 74 on September 27 indicated 'Greed.'

Funding rate — The interest rate charged by futures traders who hold long positions to those holding short positions (or vice versa). Positive rates encourage shorts to close, pushing price higher; negative rates encourage longs to close. Annualized rates show what the rate would cost/earn per year.

Long — A bet that price will rise. A trader 'going long' profits if the asset appreciates.

Long/short ratio — The proportion of long bets to short bets among traders on an exchange. A ratio of 1.17 means there are 1.17 longs for every 1 short; ratios above 1 show more bullish positioning.

Mark price — The reference price used to calculate funding payments on futures contracts. It is usually close to the spot price but may differ slightly to prevent manipulation.

Meme coin — A cryptocurrency created as a joke, internet meme, or to represent a celebrity or public figure, with no utility or underlying project. Examples: Dogecoin (started as a joke), the \$TRUMP token.

Open interest — The total value of futures contracts currently open (not yet closed). When open interest rises, traders are adding new bets; when it falls, traders are closing positions. Change is shown as a percentage.

Short — A bet that price will fall. A trader 'going short' (or selling borrowed assets) profits if the asset depreciates.

Volume — The total value of assets traded over a time period, usually measured in millions or billions of dollars. High volume suggests strong interest and liquidity.
