

**DAILY MARKET REPORT**

Tuesday, 22 September 2026

2026-09-22 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate

THE DAY IN ONE LINE

Bitcoin and Ethereum fell under half a percent on September 22 as funding rates remained low and open interest declined, signaling cautious trader positioning ahead of US inflation data.

01 · PRICE & VOLUME

What every venue's price and volume did

The same two contracts on every exchange, for this UTC day. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

BITCOIN (BTC PERPETUAL)

VENUE	CLOSE	CHANGE	HIGH	LOW	VOLUME
OKX	\$86,167.50	-0.49%	\$86,736.60	\$85,070.20	\$6.53B
Bybit	\$86,168.10	-0.48%	\$86,716.60	\$85,066.30	\$6.15B
Binance	\$86,158.60	-0.49%	\$86,699.90	\$85,080.00	\$14.56B
Bitget	\$86,169.90	-0.48%	\$86,688.00	\$85,071.50	\$2.86B
Gate	\$86,162.70	-0.49%	\$86,683.00	\$85,075.10	\$6.77B

ETHEREUM (ETH PERPETUAL)

VENUE	CLOSE	CHANGE	HIGH	LOW	VOLUME
OKX	\$2,752.68	-0.79%	\$2,776.80	\$2,714.02	\$7.31B
Bybit	\$2,752.84	-0.79%	\$2,777.19	\$2,713.37	\$3.39B
Binance	\$2,752.69	-0.79%	\$2,776.64	\$2,714.41	\$10.12B
Bitget	\$2,752.92	-0.79%	\$2,777.46	\$2,714.43	\$1.84B
Gate	\$2,752.76	-0.78%	\$2,776.79	\$2,715.00	\$6.15B

Bitcoin closed around \$86,169 (down from \$86,581 open), down 0.48% on the day. Ethereum closed at \$2,752.84 (down from \$2,774.73), down 0.79% on the day. Prices were consistent across all five major exchanges. Binance led volume in both coins with \$14.6 billion in BTC trades and \$10.1 billion in ETH trades.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	MARK
OKX	—	—	—	—	—
Bybit	—	—	—	—	—
Binance	—	—	—	—	—
Bitget	—	—	—	—	—
Gate	—	—	—	—	—

ETHEREUM

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	MARK
OKX	—	—	—	—	—
Bybit	—	—	—	—	—
Binance	—	—	—	—	—
Bitget	—	—	—	—	—
Gate	—	—	—	—	—

Funding, open interest and mark price are point-in-time (as of 23:59 UTC), not daily figures.

Funding rates were mixed and generally subdued across all exchanges: Bitcoin funding ranged from negative (OKX at -1.13% annualized) to modest positive (Bitget at 8.21%), while Ethereum funding ranged from 0.73% to 7.66%. Bitcoin open interest declined slightly, with Bybit down 0.13% and Binance down 2.74%. Ethereum open interest fell more noticeably, with Bybit down 5.66% and Binance down 1.58%. On Binance, Bitcoin long-to-short ratio stood at 0.90 (more shorts than longs), while Ethereum showed 2.41 (notably more longs). This mixed positioning and declining open interest suggest traders were neither aggressively bullish nor bearish—just cautiously positioned.

03 · BIGGEST MOVERS

The coins that moved the most

The largest moves on Binance for this UTC day, with the reason where the news supports one.

No standout movers today.

Equities and commodities traded on Binance

Binance lists tokenised perpetuals for stocks (Korea, Hong Kong, China and the US) and commodities. The perp trades nearly around the clock, but the underlying market is open only a few hours — when it was closed, that is noted instead of showing drift as a daily move.

Stock & commodity data was unavailable this run.

— 05 · MARKET NEWS

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

CFTC warns prediction markets of manipulation risk in 'mention' contracts

The Commodity Futures Trading Commission issued a staff advisory on September 22 warning that contracts based on whether someone 'mentions' a word or appears at an event carry heightened manipulation risk. The advisory tells exchanges to weigh four factors—surveillance capability, settlement verifiability, external pressure on the subject, and conflicting obligations—before listing such contracts. This is not an outright ban but shifts regulatory burden onto exchanges to prove adequate safeguards.

Hashed crypto VC launches \$300 million private-credit fund for digital assets

Hashed, a prominent cryptocurrency venture capital firm, announced a new private-credit fund targeting \$300 million to address financing bottlenecks in institutional digital asset markets. The fund will use 'covenant-based' underwriting to evaluate loan risk, signaling growing institutional appetite for credit infrastructure in crypto.

Federal Reserve approves BancFirst Corporation merger application

The Federal Reserve Board announced approval of a banking application by BancFirst Corporation on September 22, clearing regulatory hurdles for the institution. This is a routine banking approval with no direct crypto implications but reflects ongoing traditional-finance regulatory activity.

SEC censures OTC Link LLC for compliance failures

The Securities and Exchange Commission censured broker-dealer OTC Link LLC and imposed a \$575,000 penalty for longstanding violations of Regulation Systems Compliance and Integrity (Reg SCI). The violations involved repeated failures to maintain and monitor systems required for market surveillance and data reporting.

INSTITUTIONAL FLOWS AND ETFs

Bitcoin and Ethereum spot ETFs record solid inflows on September 22

US spot Bitcoin ETFs recorded \$714.7 million in net inflows on September 22, with BlackRock's IBIT leading at \$350.3 million and Fidelity's FBTC adding \$257.4 million. Ethereum spot ETFs saw \$162.2 million in inflows, with BlackRock's ETHA receiving \$88.1 million. These inflows reflect steady institutional demand despite modest price declines.

— 07 · GLOSSARY

Every term used today, in plain words

Altcoins — Any cryptocurrency other than Bitcoin or Ethereum. Altcoins typically have smaller market capitalizations and higher volatility, ranging from established projects (Solana, Cardano) to speculative tokens with low liquidity.

Basis — In the context of daily price changes, the time period over which the price change is measured. 'utc-day' means the change from market open to close within a single UTC day; 'rolling-24h' means the change over the most recent 24-hour period regardless of calendar dates.

ETF (Exchange-Traded Fund) — A fund that holds Bitcoin or Ethereum on behalf of investors and trades on traditional stock exchanges like the NYSE. Spot Bitcoin ETFs hold actual Bitcoin; flows in and out of these funds reflect institutional investor demand for exposure without holding crypto directly.

Fear & Greed Index — A sentiment indicator (scored 0–100) that measures overall market psychology toward risk. Scores below 25 = 'Extreme Fear' (potential buying opportunity); 50 = neutral; above 75 = 'Extreme Greed' (potential sell-off risk). The index fell from 78 (Extreme Greed) to 71 (Greed) on September 22.

Funding rate — A periodic payment between traders on perpetual futures contracts to keep the contract price close to the spot price. Positive funding means long (bullish) traders pay short traders; negative means shorts pay longs. Higher funding signals more aggressive bullish positioning and trader confidence that prices will rise.

Liquidation — Forced closure of a leveraged position when the value of collateral (security deposit) falls below a required minimum. Liquidations happen automatically if price moves sharply against the trader, causing sudden market sales that can accelerate price declines.

Long-to-short ratio — The proportion of open bets that traders have placed betting price will go up (longs) compared to bets that price will go down (shorts). A ratio above 1.0 means more bullish positioning; below 1.0 means more bearish. Extreme ratios can signal crowded trades vulnerable to quick reversals.

Mark price — The official reference price used by exchanges to calculate profit and loss on perpetual futures contracts. Mark price differs from the last traded price to prevent manipulation and ensure fair liquidations, typically calculated as a weighted average of spot prices and funding.

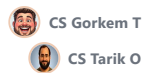

Net flow (or net inflow/outflow) — The cumulative amount of money entering (inflow) or leaving (outflow) investment vehicles like ETFs over a specific period. Positive net flow suggests growing investor confidence; negative flow suggests selling pressure or reduced interest.

Open interest — The total amount of money locked into unfilled futures or derivatives contracts on an exchange at a given time. Rising open interest signals growing trader engagement and potential for larger price moves; falling open interest suggests traders are closing positions or reducing risk.

Open interest change — The percentage increase or decrease in open interest over a single day or reporting period. Positive change means new money is entering the market; negative means money is leaving. Changes correlate with shifts in trader conviction or risk appetite.

Perpetual futures (or perps) — Derivatives contracts that let traders bet on future price moves with leverage (borrowed money), with no expiration date. Unlike regular futures, perpetuals stay linked to the spot price via funding rates and are settled continuously.

Spot price — The current market price for immediate delivery of an asset (e.g., Bitcoin at \$84,500). Spot prices are set by real-time supply and demand in cash markets, in contrast to futures prices which can differ.
