Bitcoin settled around \$76,565 with a 0.28% daily gain; Ethereum reached \$2,448.50, up 1.19% and outperforming Bitcoin. Binance led volume at \$16.6B for BTC and \$7.5B for ETH combined across venues totaling ~\$45B in crypto futures volume.

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way.

Asian equity markets rallied on September 17 as semiconductor and tech stocks led gains: South Korea's SK Hynix (+3.57%), Samsung (+1.73%), and Hyundai Motor (+2.33%) posted broad gains; Hong Kong's MiniMax (+8.30%), Zhipu AI (+4.47%), and CSOP SK Hynix leveraged ETF (+7.35%) also climbed. China's Unitree Robotics surged 8.61%. These gains likely reflect positive sentiment from the US stock market's 1.13–1.68% rebound following the Federal Reserve's first interest rate increase since July 2023 (announced September 16). Commodities were mixed: gold +1.85%, copper +2.93%, but natural gas –0.56%.

— 07 · GLOSSARY

Every term used today, in plain words

Funding rate — A periodic fee (every 8 hours) paid between traders on futures exchanges. When funding is positive, long (buy) traders pay short (sell) traders, indicating bullish sentiment. A high funding rate suggests traders are aggressively betting on price increases.

Long/Short ratio — The number of traders holding buy positions (longs) divided by traders holding sell positions (shorts). A ratio above 1.0 means more traders are betting on prices rising; below 1.0 means more are betting on prices falling.

Mark price — A futures exchange's reference price for a contract, calculated from spot price and funding to prevent flash crashes. It is the price used to calculate if your position should be closed due to losses (liquidation).

Open interest — The total number of open futures contracts (buy orders matched with sell orders) at an exchange. A rising open interest means new traders are entering; falling means traders are exiting.

Open-interest change — The percentage change in total open contracts over a day, showing whether traders are opening or closing positions. Positive means new shorts and longs are entering; negative means they are exiting.

Perpetual futures — A cryptocurrency futures contract with no expiry date that trades spot-like but with leverage (borrowed money). Traders pay or receive funding fees based on sentiment; prices are tethered to the real spot price by these fees.

Real-world assets (RWAs) — Physical or traditional financial assets (stocks, bonds, commodities, real estate) that are represented as digital tokens on a blockchain, enabling them to trade 24/7 on blockchain venues.

Stablecoin — A cryptocurrency designed to hold a steady price (usually \$1 USD) by being backed by reserves (cash, short-term debt, or an algorithmic mechanism) so it can be used for everyday transactions and savings.

Tokenized securities — Real company stocks or bonds represented as digital tokens on a blockchain, allowing them to trade on blockchain-native venues without traditional stock exchange infrastructure.
