DAILY MARKET REPORT

Monday, 2 November 2026

NEUTRAL / MIXED

2026-11-02 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

On 2 November 2026, Bitcoin and Ethereum fell about 2% and 1% respectively as Binance reopened withdrawals after a major hack, triggering spot-ETF redemptions and broad selling, while Asian stocks rallied on Chinese government stimulus measures.

TOTAL MARKET CAP	BTC DOMINANCE	ETH DOMINANCE	FEAR & GREED	MARKET BREADTH
$2.63T	**59.3%**	**10.6%**	**37 — Fear**	**70%**
-1.39%			prev 34	564 up / 236 down

01 · PRICE & VOLUME

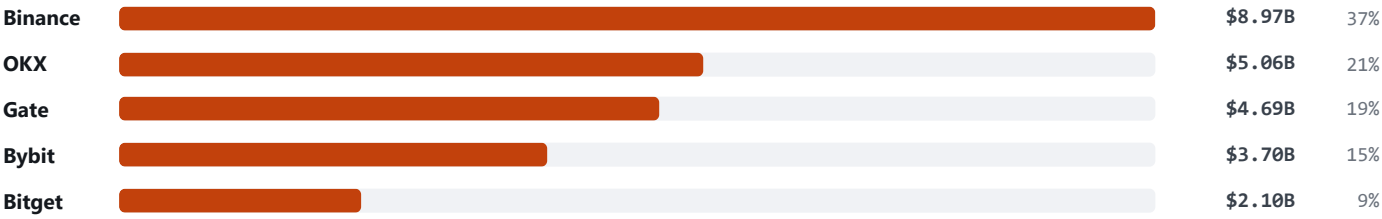

What every venue's price and volume did

The same two contracts on every exchange, for this UTC day. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

SUI Sui	$0.8727	-3.08%	$0.9087	$0.8635	$144M

Bitcoin closed around 76,800 USDT, down 1.94% from the 78,300 open, with venues closely aligned (Binance 76,791, Bybit 76,786, OKX 76,795). Ethereum closed around 2,252 USDT, down 0.94% from 2,274 open, also tightly clustered (Binance 2,252.8, Bybit 2,252.66, OKX 2,252.6). Binance led volume on both: Bitcoin $8.97 billion and Ethereum $7.48 billion out of combined multi-venue totals of roughly $21 billion and $21 billion respectively.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bitget	+9.6%	$2.91B	–	–	–	–	$77,865.50

CS Gorkem T

CS Tarik O

Funding, open interest and mark price are point-in-time (as of 23:00 UTC), not daily figures.

Bitcoin open interest rose 1.93% during the day to $7.68 billion, signaling elevated long positions despite the price drop. Ethereum open interest fell 2.01% to $5.44 billion. Funding rates were extremely high across all venues—Bitcoin and Ethereum both paid 10.95% annually (a huge cost for traders holding longs), which normally attracts shorts who collect this fee. Bitcoin's long/short account ratio was 2.30 (longs heavily favored), but the largest traders (top position ratio 1.67) showed less conviction—a sign that smart money was restraining bullish positions. Ethereum's ratio was even more bullish at 2.56, but top traders (1.54) were equally reserved. Both coins showed selling pressure in taker buy/sell ratios (Bitcoin 0.51, Ethereum 0.49)—traders buying were outnumbered by those selling aggressively. Market breadth was 70.15% up (564 coins gained, 236 fell), indicating strength in smaller altcoins and speculative plays while the two largest cryptocurrencies weakened.

03 · BIGGEST MOVERS

The coins that moved the most

The largest moves on Binance for this UTC day, with the reason where the news supports one.

AKEUSDT **-41.6%** · $159M vol · on Binance

AKE fell 41.57% from 0.008861 to 0.003969 on $158.6 million volume. No clear public cause identified in news sources or crypto announcements for this extreme single-day collapse.

ARIAUSDT **+37.5%** · $271M vol · on Binance

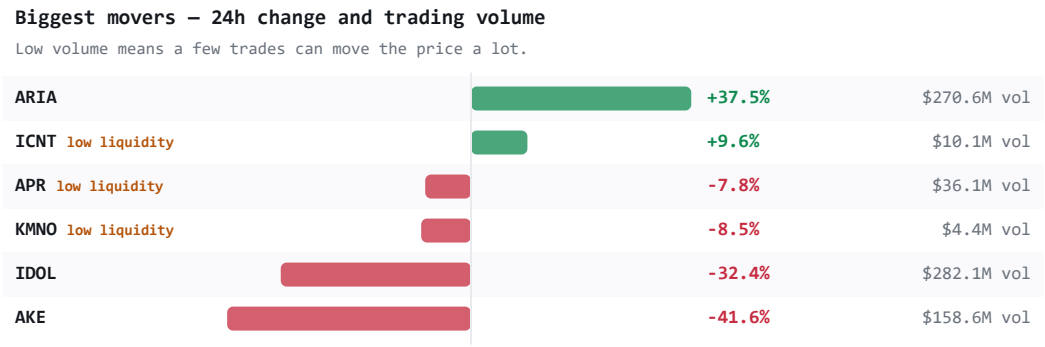

ARIA surged 37.54% from 0.08203 to 0.12029 on $270.6 million volume. No identifiable news event or market catalyst in publicly available sources explains this parabolic gain.

IDOLUSDT **-32.4%** · $282M vol · on Binance

IDOL fell 32.42% from 0.027763 to 0.016934 on $282.1 million volume. No associated news or on-chain developments found to explain the sharp decline despite heavy trading.

South Korea's KOSPI index surged 2.38% with semiconductor strength: SK Hynix (+3.996%), Samsung Electronics (+3.61%), and the KOSPI 200 ETF (+2.205%) led on demand for chip stocks. Hong Kong's Hang Seng gained 0.42% as tech stocks climbed: Xiaomi (+1.099%), Tencent (+1.298%), and CSOP SK Hynix 2x leveraged fund (+7.443%) rose; some decliners like Zhongji Innolight (-3.703%) and MiniMax (-4.965%) offset gains. China's CSI 300 added 0.21% as government financial regulators announced a 15 billion US-dollar swap facility and met with major banks and securities firms on stimulus measures, supporting sentiment. The Asian rally reflected coordinated policy support and reduced tech sector pessimism despite global weakness.

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

Binance Withdrawals Reopen; Spot ETFs Record $539M Combined Outflow

Binance resumed cryptocurrency withdrawals on November 2 after three days of closure following the $6.3 billion theft confirmed by the FBI on November 1. US spot Bitcoin ETFs recorded $398.6 million in net redemptions (led by BlackRock's IBIT at -$405.3 million) and Ethereum ETFs saw $139.7 million outflow, marking the sixth consecutive day of Ether fund outflows. Selling pressure from crypto exchange reserves and institutional fund redemptions drove prices lower despite strong breadth in smaller altcoins.

Bitcoin, Ethereum · 2026-11-02 08:00 · Farside Investors / SoSoValue, CoinDesk

Asian Stock Markets Rally on Chinese Stimulus; Korea KOSPI Gains 2.38%

South Korea's KOSPI index surged 2.38%, led by semiconductor stocks SK Hynix (+3.996%) and Samsung Electronics (+3.61%) on recovery hopes. Hong Kong's Hang Seng climbed 0.42% and tech index rose 2.25%. Mainland China's CSI 300 gained 0.21% after government announced a 15 billion US-dollar swap facility and held meetings with major banks and securities firms to discuss stock market support measures, ending a month of severe underperformance.

Fear Index Rises to 37 as Market Cap Falls 1.39%; Bitcoin Eyes $76K Support

The Crypto Fear & Greed Index rose to 37 (Fear) from 34, reflecting uncertainty after the Binance breach and Ethereum ETF outflows. Global cryptocurrency market capitalization fell 1.39% to $2.63 trillion despite 70% of Binance perpetual contracts trading higher. Bitcoin tested the critical $76,000 support level multiple times during the day; technical analysts flagged this as a key breakpoint for further liquidations if broken.

REGULATION AND POLICY

[Context: Nov 3] CFTC Approves Individual Stock Perpetual Futures for US Trading

The US Commodity Futures Trading Commission (CFTC) approved regulated exchanges to offer perpetual futures contracts on individual stocks, bringing a cryptocurrency-native trading instrument to traditional equities for the first time in the US. Chair Michael Selig said this gave US traders a regulated alternative to offshore venues. The move followed Kalshi's filing in October for such contracts and marks a significant regulatory expansion of leveraged derivatives products.

Not applicable (equities/traditional markets) · 2026-11-03 14:00 · CFTC official statement, CoinDesk, The Block

[Context: Nov 3] SEC Issues No-Action Letter on Canton Coin; Digital Commodity Designation

The SEC's Division of Corporation Finance issued a no-action letter for Canton Coin (CC), stating it views the token as a digital commodity rather than a security. This means the SEC will not recommend enforcement action over CC's programmatic issuance process. The ruling provides regulatory clarity for programmatically-issued tokens and suggests the SEC's approach is narrowing the securities vs. commodity line.

Canton Coin (CC) · 2026-11-03 10:00 · SEC, The Block

EXCHANGE AND PLATFORM CHANGES

Binance Completes Initial Withdrawal Phase; 95% of Assets Replaced

CS Gorkem T

CS Tarik O

Binance disclosed that it had replaced 95% of the $6.3 billion stolen funds and reopened withdrawals progressively on November 2. The exchange attributed remaining gaps to lower-liquidity tokens and said it would continue systematic replacement. This triggered customer-initiated transfers out of Binance, contributing to the $398.6 million Bitcoin and $139.7 million Ethereum ETF redemptions as users moved to self-custody or cold storage.

Bitcoin, Ethereum, multiple altcoins · 2026-11-02 09:00 · Binance official statements, Crypto news aggregators

HACKS, EXPLOITS AND OUTAGES

[Context: Nov 3] Binance Hack Details Emerge: AI Tool Exploit, Multi-Month Campaign

Binance's November 3 security report revealed that North Korean-linked hackers used fake job interviews to compromise employees over many months, then exploited an internal AI-assisted tool and stolen credentials to access wallet-signing infrastructure. The breach used Ethereum's EIP-7702 mechanism (account abstraction) to execute unauthorized transactions. This was the first detailed breakdown of how a $6.3 billion exchange theft occurred, raising industry-wide concerns about AI-assisted social engineering.

Bitcoin, Ethereum · 2026-11-03 12:00 · CoinDesk, Cointelegraph, Binance incident report

UNCONFIRMED AND WATCH ITEMS

[Context: Nov 3] Tether CEO Claims 150,000 Bitcoin Holdings; Exceeds Reserve Report by 50,000

Tether CEO Paolo Ardoino told attendees at the Plan ₿ Forum in Lugano that the company owns 'give or take 150,000 Bitcoin,' but Tether's Q3 2026 reserve report showed only 100,060 Bitcoin backing USDT in circulation. The 50,000 BTC discrepancy (worth approximately $3.8 billion at current prices) raised questions about reserve composition and whether unreported Bitcoin is held for other purposes or represents a reporting lag.

Bitcoin, Tether (USDT) · 2026-11-03 09:00 · Decrypt, Plan ₿ Forum

ETF FLOWS

US spot Bitcoin ETFs recorded $398.6 million in net outflows on November 2, with BlackRock's IBIT leading redemptions at -$405.3 million despite inflows into other issuers' funds. US spot Ethereum ETFs recorded $139.7 million in net outflows, extending a six-day redemption streak. Combined outflow of $539 million reflected institutional repositioning and retail de-risking following Binance's reopening of withdrawals after the $6.3 billion theft.

07 · GLOSSARY

CS Gorkem T
CS Tarik O

Every term used today, in plain words

Altcoins — Any cryptocurrency other than Bitcoin and Ethereum. Includes thousands of smaller tokens and projects traded on crypto exchanges.

Basis — The difference between the futures price (perpetual contract price) and the spot price (current market price). Wide basis can indicate leverage and positioning imbalances.

Breadth — The percentage of assets in a market that moved in a particular direction (up or down). High up-breadth (70%+) suggests broad participation in gains; low breadth with index gains suggests concentration in fewer assets.

Cold storage — Keeping cryptocurrency in offline storage (hardware wallets, paper wallets) not connected to the internet, used to prevent theft from exchange hacks.

Crypto Fear & Greed Index — A measure of market sentiment ranging from 0 (extreme fear) to 100 (extreme greed). Values below 50 indicate fear; values above 50 indicate greed.

ETF outflow / redemption — When investors sell shares of a Bitcoin or Ethereum ETF back to the issuer, triggering the issuer to reduce holdings. Large outflows can pressure prices as issuers sell underlying crypto.

Funding rate — A recurring payment between traders in perpetual futures contracts. When funding is positive (above zero), long traders pay short traders; this rate is an annualized percentage. High rates signal excess leverage and bullish crowding.

Long position — A bet that an asset's price will go up. A trader who holds a long position profits if the price rises.

Long/short ratio — The proportion of traders holding long positions (betting price goes up) versus short positions (betting price goes down). A ratio above 1.0 means more longs; below 1.0 means more shorts.

Mark price — The reference price used to calculate profits and losses on perpetual futures, calculated from index prices and spot prices to prevent manipulation. Similar to but distinct from the last trade price.

Open interest — The total value (in USD or coins) of all open derivative positions (longs and shorts) in a market. Rising open interest with rising price suggests conviction in the uptrend; rising OI with falling price suggests high leverage and risk of liquidations.

Perpetual futures / perps — A leveraged derivative contract that tracks an asset's price and never expires, unlike regular futures. Traders can hold positions indefinitely while paying or receiving funding rates.

Self-custody — Holding cryptocurrency directly in a personal wallet that you control, rather than on an exchange. Provides security but requires users to manage their own private keys.

Short position — A bet that an asset's price will go down. A trader who holds a short position profits if the price falls.

Taker buy/sell ratio — The ratio of aggressive buy orders (takers) to sell orders (takers) in a market. Above 1.0 indicates more aggressive buyers than sellers; below 1.0 indicates more aggressive sellers.

Top position ratio — The ratio of long to short positions held by the largest traders in a market (typically the top 10-20 accounts by size). Shows whether institutional traders are net-long or net-short.

Volume — The total amount (usually in USD) of assets traded on an exchange or across all exchanges during a period, measured in quote currency (USDT, USD, etc.).
