† this venue's UTC-day candle was unavailable — its figures are the rolling 24 hours.

Bitcoin traded at consistent prices across all five major venues, closing near $81,813 on Binance (down 2.28%); Ethereum similarly uniform near $2,446 (down 3.54%). Binance dominated volume with $11.8 billion in BTC and $9.3 billion in ETH trading, roughly 2× the volume of competing exchanges.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

BITCOIN

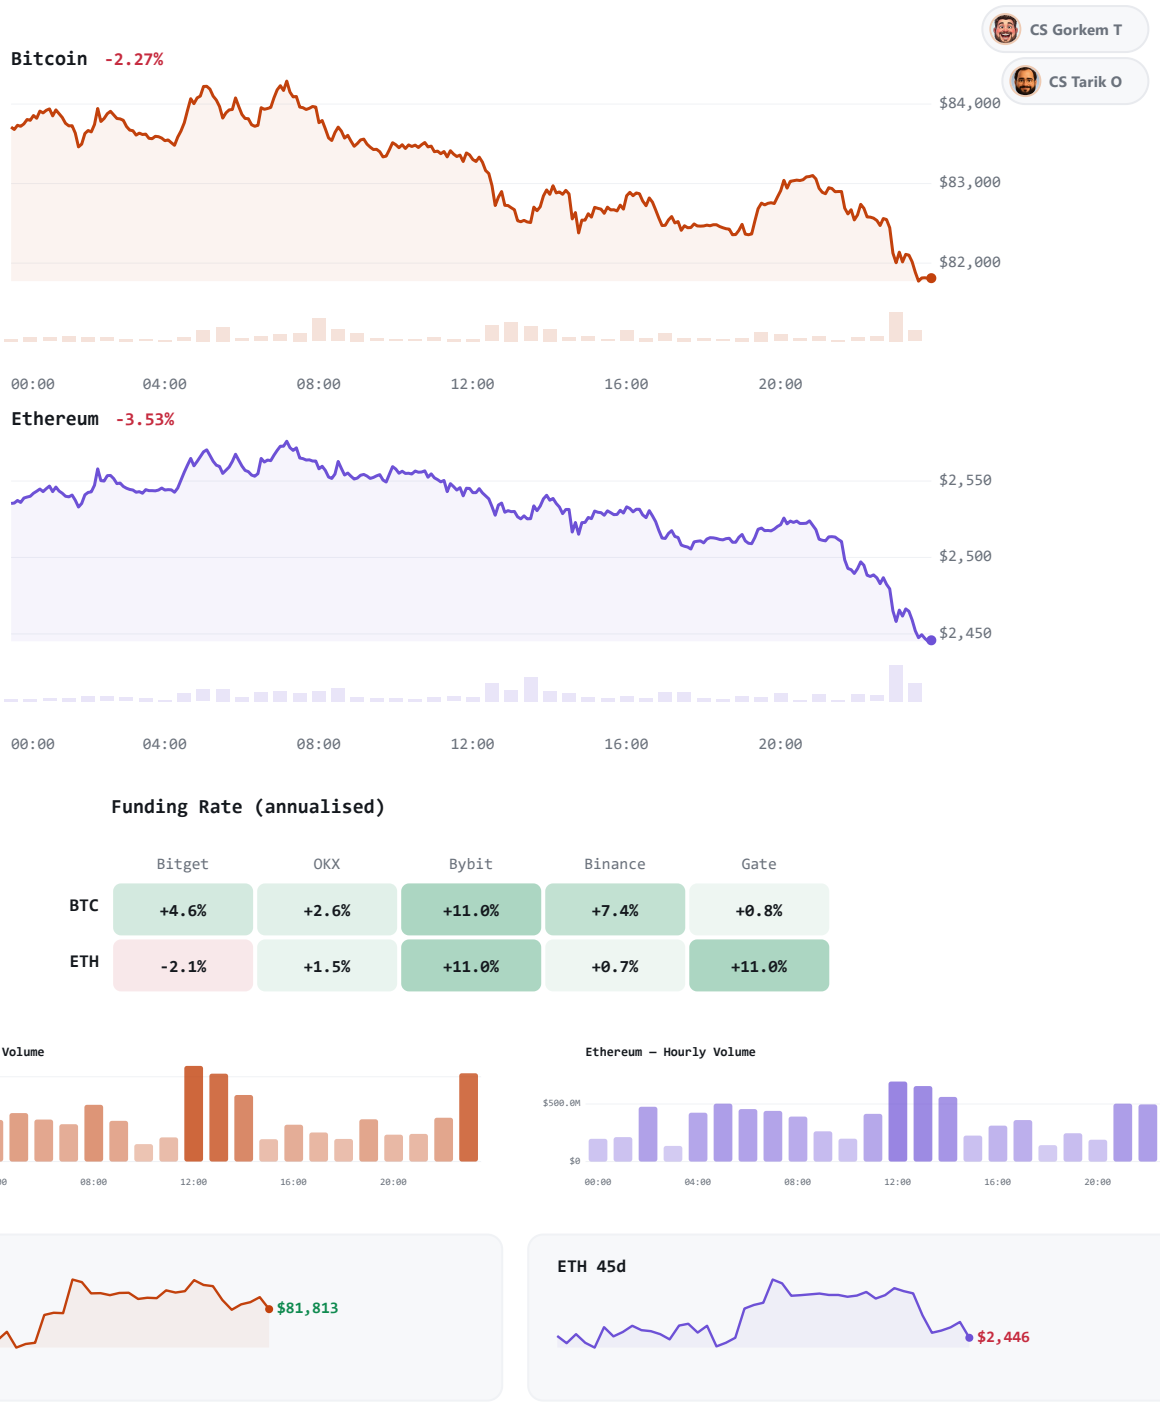

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bitget	+4.6%	$2.71B	–	–	–	–	$81,887.60

Gate	+11.0%	$1.88B	—	—	—	—	$2,447.24

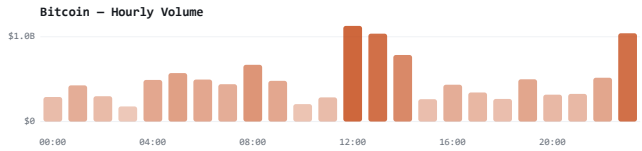

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

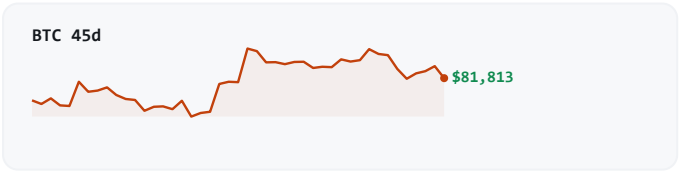

Bitcoin funding remained elevated at 7.38% annualized, showing bulls still paid to hold longs despite the price decline; Ethereum's funding went negative on some venues (−2.08% on Bitget), signaling forced liquidations of leveraged longs. On Binance, Ethereum's open interest fell 4.64%, confirming deleveraging. Top traders held 1.55× long/short on Bitcoin and 1.54× on Ethereum—both still bullish, but Ethereum's taker buy/sell ratio dropped to 0.96 (below 1.0 means more aggressive selling). Across Binance perps, only 10% moved up; 714 out of 793 tokens were down, marking a sharp capitulation of breadth.

THE THREE THAT MATTERED MOST

Blur to shut down frontend next month as NFT trading volume dwindles

The NFT marketplace announced it will deprecate its frontend on November 12, 2026, while the onchain protocol remains operational. Blend, its lending product, will also stop matching new loans on that date. The BLUR token fell more than 20% (data pack shows −28.5%) as the market reacted to the closure of the user-facing platform.

Bitcoin drops 2.2% as Ukraine, Iran strikes send oil toward one-month high

Middle East geopolitical escalation between Ukraine and Iran pushed crude oil prices sharply higher (WTI +2.47%, Brent +1.84%), triggering a broad sell-off in risk assets. Bitcoin fell below $83,000 and Ethereum declined 3.5% as traders reduced leverage and rotated into defensive positions ahead of major US economic data later in the week.

Ethereum ETFs extend outflow streak; Bitcoin ETFs lost $681 million in week

Spot Bitcoin and Ethereum ETFs recorded a combined $1.22 billion in net outflows for the week ending October 12, with Bitcoin ETFs down $681 million and Ethereum ETFs down $542 million. This reversed three consecutive weeks of Bitcoin inflows and extended Ethereum's outflow streak to nine consecutive days, totaling approximately $635 million as rising Treasury yields and inflation concerns weighed on fund flows.

07 · GLOSSARY

CS Gorkem T
CS Tarik O

Every term used today, in plain words

Basis — The difference between the spot price (cash market) and the futures price. A positive basis means futures trade above spot (bullish); a negative basis means futures trade below spot (bearish).

Breadth — The percentage of all assets that moved up (or down) on a given day. Breadth of 10% up means only 1 in 10 tokens gained value—a sign of concentrated moves and weak overall participation.

Fear and Greed Index — A daily sentiment gauge (0–100 scale) that measures whether crypto markets are dominated by fear (0–30), neutral (31–70), or greed (71–100). Used to spot potential reversals when sentiment reaches extremes.

Funding rate — The interest rate paid by traders holding leveraged positions (long or short) to the opposite side. Positive funding means long traders pay shorts (bullish signal), negative means shorts pay longs (bearish). Rates are paid every 8 hours on major exchanges.

Long/short ratio — The ratio of traders betting on price rises (longs) versus those betting on declines (shorts). A ratio above 1.0 means more longs exist; below 1.0 means more shorts. Extreme ratios can signal exhaustion (too many on one side).

Mark price — The reference price used to calculate trading profits/losses and trigger liquidations on perpetual (leveraged) contracts. It typically averages the spot price and futures price to prevent manipulation.

Open interest — The total dollar value of all open leveraged positions (long and short combined) on an exchange at a given time. Rising open interest signals more leverage entering the market; falling open interest means positions are being closed or liquidated.

Open interest change — The percentage increase or decrease in total open interest over a day. A decline often signals deleveraging (forced or voluntary position closures) and can precede sharp price moves.

Stablecoin — A cryptocurrency designed to hold a fixed value (usually $1 USD) by maintaining reserves or using algorithms. Common examples are USDC (dollar-backed) and USDT (dollar-backed Tether). Used as a safe harbor in volatile crypto markets.

Taker buy/sell ratio — The ratio of market-buy orders (takers) versus market-sell orders. A ratio above 1.0 means more aggressive buying; below 1.0 means more aggressive selling. Reflects immediate momentum and sentiment.

Top position ratio (top trader long/short) — The long-to-short ratio among the largest traders on an exchange. Often more reliable than overall account ratios because it shows whether institutions are bullish or bearish.
