02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 22:12 UTC), not daily figures.

Bitcoin funding remained positive at 7.55% annualized with open interest growing 3.1%, showing long-biased positioning (1.35:1 account ratio, 2.09:1 among top traders), though taker volume was nearly balanced. Ethereum displayed weaker positive funding (0.81%), modest open-interest growth (1.1%), and stronger long concentration (2.71:1 accounts, 1.67:1 top traders) paired with light taker selling (0.964 ratio). Market breadth was bearish overall: only 35% of Binance perpetuals closed higher, signaling broad weakness despite major-pair gains.

03 · BIGGEST MOVERS

The coins that moved the most

The largest moves on Binance for this UTC day, with the reason where the news supports one.

龙虾 **USDT +207.3%** · \$521M vol · on Binance

Rebounded 207% on the day after a sharp 63% drop in the prior 24 hours; no clear public cause. Likely a technical rebound or short squeeze from oversold conditions.

MOVR **USDT +33.5%** · \$1.53B vol · on Binance

Gained 33.5% on the day following a 32% decline in the prior 24 hours; no clear public cause. Similar rebound pattern to other altcoin reversals.

ALICE **USDT +25.1%** · \$100M vol · on Binance

Rose 25% on the day after a 18.6% drop in the prior 24 hours; no clear public cause. Part of a broader rebound trend in previously beaten-down tokens.

THE THREE THAT MATTERED MOST

SEC proposes crypto custody framework for institutional funds

The SEC proposed rules allowing registered investment advisers and regulated funds to self-custody crypto assets when no qualified custodian is available, and permitting state-chartered trust companies to serve as qualified custodians. SEC Chair Paul Atkins stated the \$2+ trillion crypto asset market had 'grown from a niche curiosity' but regulatory frameworks had not kept pace. The proposal removes barriers preventing investment advisers from offering crypto investment services, with a 60-day public comment period.

Bitget resumes Bitcoin and Ethereum withdrawals after security incident

Bitget resumed phased restoration of withdrawals for Bitcoin, Ethereum, and USDT following a security incident on September 24. The platform's Protection Fund was replenished to over \$300 million as of October 1, signaling recovery and user asset security.

Hyperliquid and Circle press EU regulators on stablecoin and derivatives rules

Hyperliquid's policy group filed comments with the European Commission arguing perpetual futures should be regulated under securities law (MiFID II) rather than crypto rules, while Circle urged the EU to revise stablecoin reserve requirements in the MiCA framework review, pushing for flexible liquidity rules instead of mandatory bank-deposit floors to preserve cross-border stablecoin issuance.

REGULATION AND POLICY

Federal Reserve Governor Waller discusses FRED data platform and artificial intelligence

FOMC Member Christopher Waller delivered a speech at the FRED Confidential conference (Federal Reserve Bank of St. Louis) focused on the evolution of the FRED economic data platform and AI integration. The speech addressed AI opportunities (faster data discovery and visualization) and risks (hallucination, bias, correlation confusion) but did not cover interest-rate policy or monetary decisions. The Fed announced the FRED MCP Connector enabling AI agents to access 850,000+ economic data series while maintaining source attribution.

INSTITUTIONAL FLOWS AND ETFS

Bitcoin ETF flows reverse to positive after nine-day inflow streak ends

Spot Bitcoin ETFs recorded \$170.2 million in net inflows on October 1, reversing the prior day's \$148.7 million outflow which had ended a nine-day inflow streak totaling \$3.1 billion. The data reflects renewed institutional demand following the brief outflow window.

REST OF THE WEEK

Mon 05 Oct	US ISM Services PMI October 2026	14:00
Wed 07 Oct	FOMC Minutes October 2026	18:00

Every term used today, in plain words

Basis — The time window over which price and volume data are aggregated. 'UTC-day' means all data from 00:00–23:59 UTC for that calendar date.

Funding rate — The periodic payment between long and short traders in perpetual futures contracts. Positive funding means long-position holders pay short-position holders; a sign the market leans bullish. Annualized funding rates show what that rate would equal if paid every year.

Mark price — A reference price used in perpetual futures contracts to trigger funding payments and liquidations; typically a weighted average of spot prices across major exchanges, designed to prevent the perpetual price from straying too far from the real-world asset price.

Market breadth — The percentage of assets in a basket (e.g., all Binance perpetual contracts) that gained value during the period. Below 50% means more assets fell than rose; a bearish signal.

MiCA — Markets in Crypto-Assets Regulation; the European Union's regulatory framework for cryptocurrency services, including rules for stablecoin reserves, custody, and platform licensing.

Open interest — The total number of open positions (or their total notional value in USD) across all perpetual futures contracts for a given asset. Rising open interest suggests traders are taking larger positions; falling open interest suggests they are closing out.

Open-interest change — The percentage increase or decrease in total open interest during a period. Positive change means traders added to their positions; negative means they reduced them.

Perpetual futures — Leveraged contracts that track the price of an asset (like Bitcoin) without an expiration date, allowing traders to go long or short with borrowed capital. Funding rates keep the perpetual price aligned with the spot price.

Taker buy/sell ratio — The ratio of volume from buyers who 'take' the asking price to volume from sellers who 'take' the bid price. Ratios above 1 indicate more aggressive buying; below 1 indicate more aggressive selling by market-takers.

Top trader position ratio — The long-to-short position ratio among the largest traders on an exchange (not all traders). A ratio above 1 means top traders hold more long than short positions. Used to gauge whether sophisticated players are betting bullish or bearish.
