DAILY MARKET REPORT

Saturday, 17 October 2026

NEUTRAL / MIXED

2026-10-17 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Market-wide weakness hit most cryptocurrencies on October 17, with Bitcoin and Ethereum posting modest losses while 85% of smaller assets fell sharply.

TOTAL MARKET CAP	BTC DOMINANCE	ETH DOMINANCE	FEAR & GREED	MARKET BREADTH
$2.75T	59.5%	10.7%	55 — Greed	15%
-3.25%			prev 63	118 up / 672 down

01 · PRICE & VOLUME

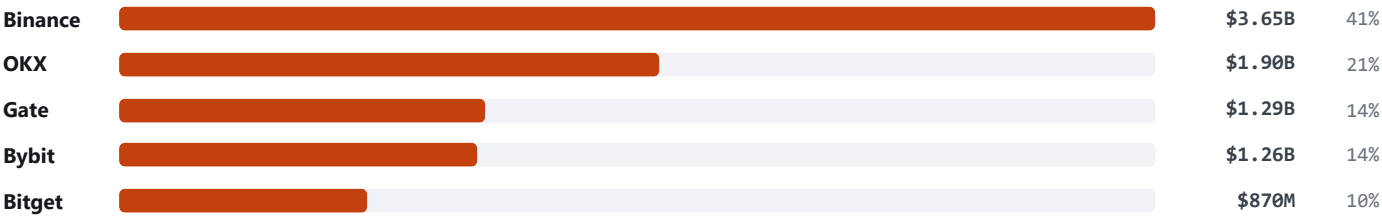

What every venue's price and volume did

The same two contracts on every exchange, for this UTC day. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

BITCOIN (BTC PERPETUAL)

$81,455.90 -0.15% $80,740.00 — $81,741.30

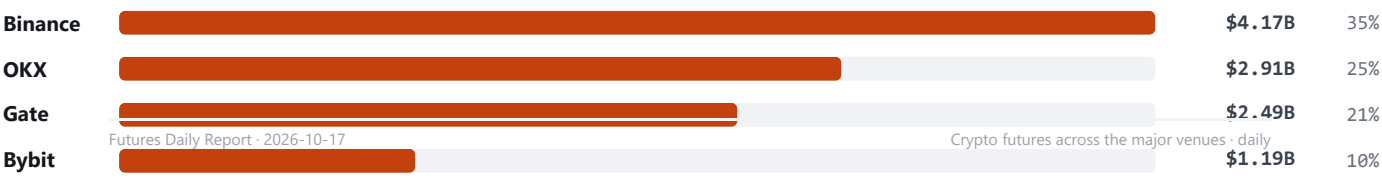

Spread: **$10.40** (0.0%) Total volume: **$8.97B**

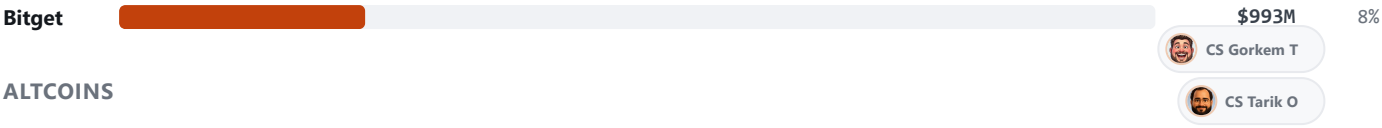

ETHEREUM (ETH PERPETUAL)

$2,401.58 -0.86% $2,355.00 — $2,441.38

Spread: **$0.21** (0.0%) Total volume: **$11.75B**

ALTCOINS

COIN	CLOSE	CHANGE	HIGH	LOW	VOLUME
SOL Solana	$103.42	-0.94%	$105.24	$101.16	$831M
XRP XRP	$1.2935	-1.32%	$1.3122	$1.2687	$387M
BNB BNB	$718.54	-0.46%	$723.72	$710.38	$194M
DOGE Dogecoin	$0.07931	-1.95%	$0.08089	$0.07697	$233M
ADA Cardano	$0.2194	-2.71%	$0.2257	$0.2139	$97M
AVAX Avalanche	$9.761	-1.93%	$10.089	$9.553	$90M
LINK Chainlink	$11.98	-2.93%	$12.382	$11.74	$78M
SUI Sui	$0.9757	-4.41%	$1.0209	$0.9518	$164M

Bitcoin and Ethereum prices stayed consistent across all five major trading venues (Binance, Bybit, OKX, Bitget, Gate). Bitcoin closed around $81,445–$81,455, down 0.15–0.17% on the day. Ethereum closed around $2,401, down 0.86–0.88%. Binance led volume in both: BTC $3.6 billion and ETH $4.1 billion traded.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bitget	+8.4%	$2.83B	–	–	–	–	$81,427.80
OKX	+6.4%	$2.49B	–	1.81	–	–	$81,434.30
Binance	+7.0%	$7.68B	-0.0%	1.73	1.77	1.05	$81,435.80
Bybit	+11.0%	$4.89B	+1.1%	–	–	–	$81,427.40
Gate	+2.1%	$4.15B	–	–	–	–	$81,427.84

ETHEREUM

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bitget	+2.0%	$1.85B	–	–	–	–	$2,401.31
Bybit	+11.0%	$1.84B	-1.5%	–	–	–	$2,401.11

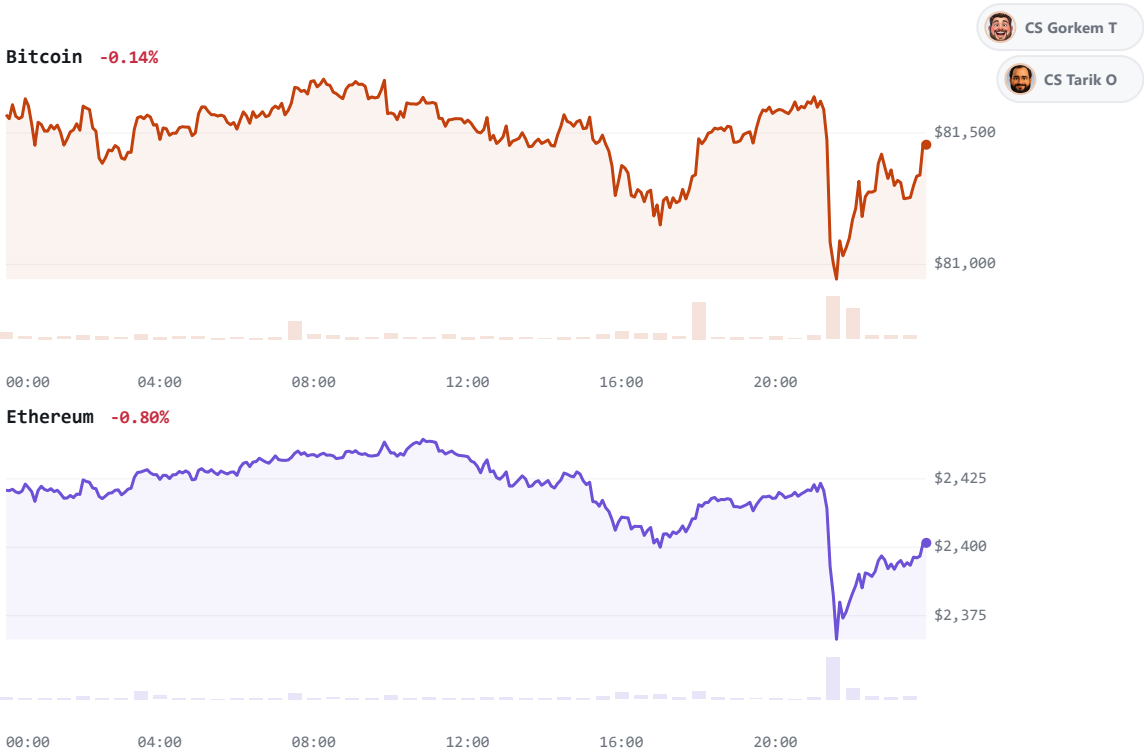

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
OKX	+2.3%	$1.37B	—	2.41	—	—	$2,401.14
Binance	+5.2%	$5.44B	+0.7%	2.92	1.71	1.02	$2,401.08
Gate	+0.8%	$1.88B	—	—	—	—	$2,400.63

CS Gorkem T

CS Tarik O

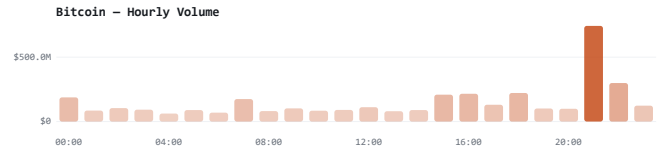

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

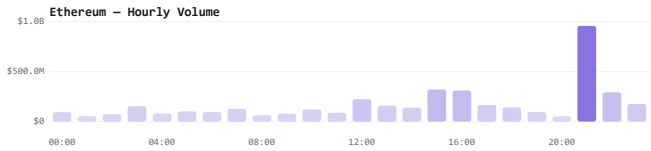

Traders remain bullish despite the losses. Bitcoin's long-to-short ratio stood at 1.73, meaning longs outnumbered shorts; the largest traders leaned even more long at 1.78. Ethereum had stronger long bias at 2.92. Funding rates stayed positive across all exchanges (ranging 2–11% annualized), signaling traders still expect prices to rise. Taker buy pressure slightly exceeded sell pressure (1.05 ratio on BTC, 1.02 on ETH), showing traders buying into the weakness. Both BTC and ETH open interest fell slightly (−0.16% and −0.15%, respectively), suggesting some position liquidation. Market breadth—the percentage of all Binance perpetuals that gained on the day—was weak at just 14.88%, with 672 of 793 markets down.

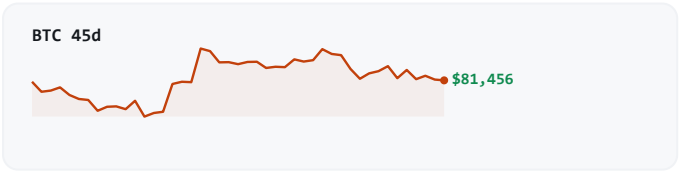

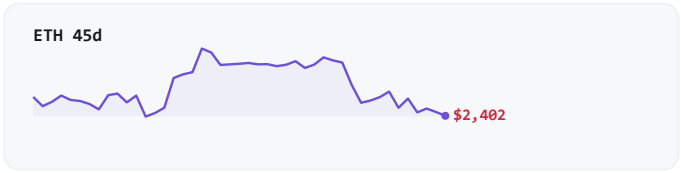

Funding Rate (annualised)

	Bitget	OKX	Binance	Bybit	Gate
BTC	+8.4%	+6.4%	+7.0%	+11.0%	+2.1%
ETH	+2.0%	+2.3%	+5.2%	+11.0%	+0.8%

03 · BIGGEST MOVERS

The coins that moved the most

The largest moves on Binance for this UTC day, with the reason where the news supports one.

QUSDT +111.4% · $850M vol · on Binance

Q surged 111.4% with $850 million in volume. No clear public cause identified in crypto news sources.

AGTUSDT +35.7% · $843M vol · on Binance

AGT jumped 35.7% with $843 million in volume. No clear public cause identified.

AVAUSDT +28.7% · $76M vol · on Binance

AVA climbed 28.7% with $76 million in volume. No clear public cause identified.

Platinum XPT	$1,636.73	-0.10%	$1M

Saturday October 17 was a weekend, so US and Asian stock markets (New York, Hong Kong, Korea, China) were closed. Asian-listed stock perps showed weakness—SK Hynix (down 2.45%), Samsung (down 1.71%), and AI firms Zhipu (down 3.45%) and GigaDevice (down 3.30%) traded lower—but these reflect no actual cash-market moves, only weekend perp trading. Oil was nearly flat (WTI +0.06%, Brent +0.13%). Gold spot price was essentially unchanged.

05 · MARKET NEWS

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

Binance Pool mining shutdown announced for November 10, 2026

Binance announced it will shut down Binance Pool, Cloud Mining, and Pool Savings at 07:00 UTC on November 10. Miners have 24 days to redirect their equipment to another pool. Mining records remain viewable for 14 days after shutdown (until November 24). The exchange cited an ongoing review of products and services as the reason.

Nine crypto firms form Quantum Alliance to defend against future quantum threats

A coalition of blockchain companies—including Postquant Labs, Midnight Foundation, Hacken, Quantus, American Fortress, Intmax, Keystone, and Abelian—launched the Quantum Alliance on October 15-16. The group aims to create open standards for post-quantum security and to define and verify what it means for blockchains to be quantum-resistant. This comes after Google's Willow quantum processor demonstrated a 40-fold reduction in quantum errors on October 15, raising awareness that roughly 6.04 million BTC (30% of supply) sit in quantum-exposed addresses.

Goldman Sachs, Wells Fargo, and Morgan Stanley see tokenization as growth opportunity

Three of the world's largest banks publicly framed tokenized assets and digital securities as business opportunities rather than threats. Goldman Sachs sees tokenization expanding its trading business and has joined a tokenization trial with DTCC (July 2026). Wells Fargo reports its tokenized deposit system is already processing cross-border payments in under two minutes and is in production. Morgan Stanley expects to support tokenized equities by Q1 2027, citing tokenization as a way to create demand for wealth management advisory services.

REGULATION AND POLICY

Fairshake Super PAC allocates $7 million more toward defeating US Senator Sherrod Brown

An FEC filing showed the Defend American Jobs PAC (affiliated with the Fairshake crypto Super PAC) disclosed roughly $7 million in additional advertising spending against Ohio's Senator Sherrod Brown, a vocal crypto critic. The PAC's total spending against Brown now exceeds $46 million with days to go before the election. The spending reflects the crypto industry's organized effort to influence US electoral outcomes.

INSTITUTIONAL FLOWS AND ETFS

US spot Bitcoin and Ethereum ETFs record net outflows on October 16 (context)

On October 16, spot Bitcoin ETFs posted $82.39 million in net outflows, led by BlackRock's IBIT ($71.78 million out). Ethereum ETFs shed $69.68 million the same day, with BlackRock's ETHA accounting for the entire net outflow. This marks a third consecutive trading day of ETH fund withdrawals. Cumulative ETF inflows for the year stand at $56.88 billion (BTC) and $12.94 billion (ETH).

Ledger hardware wallet theft follow-up: Southeast Asia supply chain compromise

A follow-up investigation found that cryptocurrency on Ledger hardware wallets sold through certain Southeast Asian resellers has been drained, even though the wallets appeared to function normally. This suggests tampering occurred before the wallets reached customers. Ledger has asked resellers in seven Asian markets to pull devices from sale. Earlier reports indicated scammers may have extracted $86 million from victims.

07 · GLOSSARY

Every term used today, in plain words

Funding rate — The interest rate that traders who hold long positions (bets on price going up) pay to traders who hold short positions (bets on price going down) in perpetual futures contracts. A positive funding rate means longs are paying shorts. High funding rates signal most traders are bullish and willing to pay to stay long.

Leverage — Borrowing money to increase the size of a position. For example, 5x leverage means you control 5 times the position size of your own capital. Leverage magnifies both gains and losses, and can lead to liquidation if the price moves against you.

Long-to-short ratio (or long/short ratio) — The ratio of long positions (bets that price will rise) to short positions (bets that price will fall). A ratio of 2.0 means there are twice as many longs as shorts. Ratios above 1.0 indicate more bullish positioning; below 1.0 indicates more bearish positioning.

Mark price — The reference price used in perpetual futures markets to calculate profits and losses and to trigger liquidations. It is designed to track the spot price more fairly than the last-traded price, which can be distorted by brief surges of trading activity.

Market breadth — The percentage of cryptocurrencies or other assets that gained price on a given day (or period), as a gauge of overall market health. High breadth (e.g., 70% up) suggests broad strength across many assets; low breadth (e.g., 15% up) suggests only a few leaders are up while most are down.

Mining (or hash rate) — The process of solving complex mathematical puzzles to validate transactions and create new blocks on a proof-of-work blockchain (like Bitcoin). Miners compete to solve puzzles, and the winner receives newly minted cryptocurrency and transaction fees. Hash rate is the combined computational power of all miners.

Open interest — The total number of outstanding derivative contracts (like perpetual futures) that have not been closed or settled. It measures how much traders collectively have at risk in the market. Rising open interest often signals conviction; falling open interest can signal liquidations or reduced trader engagement.

Open-interest change — The percentage change in total open interest over a period (usually a day). Positive change means more contracts were opened; negative change means contracts were closed or liquidated.

Perpetual futures (or perps) — Derivative contracts that track the price of an underlying asset (like Bitcoin) but have no expiration date. Traders can go long (betting price rises) or short (betting price falls) with leverage, paying or receiving funding rates based on market imbalance.

Quantum threat (or quantum risk) — The theoretical risk that a sufficiently powerful quantum computer could break the elliptic curve cryptography used to secure Bitcoin and Ethereum private keys, allowing an attacker to steal coins. Current quantum computers are far too weak to pose this risk, but advances in quantum computing could threaten Bitcoin decades in the future.

Real-world assets (RWAs) — Tangible or intangible assets that exist outside the blockchain (e.g., real estate, commodities, company shares, bonds) that are tokenized or tracked on-chain for trading, settlement, or transparency purposes.

Stablecoin — A cryptocurrency designed to hold a stable value, typically pegged to a fiat currency like the US dollar (e.g., USDC, USDT). Stablecoins are used for payments, savings, and to move between crypto and traditional finance with minimal price risk.

Taker buy/sell ratio — The ratio of aggressive buy orders (takers buying at the ask) to aggressive sell orders (takers selling at the bid) over a period. A ratio above 1.0 means more aggressive buying; below 1.0 means more aggressive selling. It indicates which side is initiating trades more actively.

Tokenization — The process of converting rights or assets into digital tokens on a blockchain. For example, a company can tokenize its shares, a bank can tokenize deposits, or an asset manager can tokenize fund shares. Tokenization can speed up trading, settlement, and ownership transfer.

Top trader position ratio — The long-to-short ratio among the largest traders on a given exchange. It shows whether the biggest, most sophisticated traders are leaning long or short. A ratio of 1.8 means the largest traders have 1.8 times more long exposure than short.
