DAILY MARKET REPORT

Sunday, 20 September 2026

NEUTRAL / MIXED

2026-09-20 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Bitcoin consolidated near $81,140 while Ethereum climbed 0.45%, and three regulatory moves—SEC approving tokenized stocks, Visa closing rewards loopholes, and an EU staking review—reshaped the compliance landscape alongside scandals at Polymarket and broader platform challenges.

01 · PRICE & VOLUME

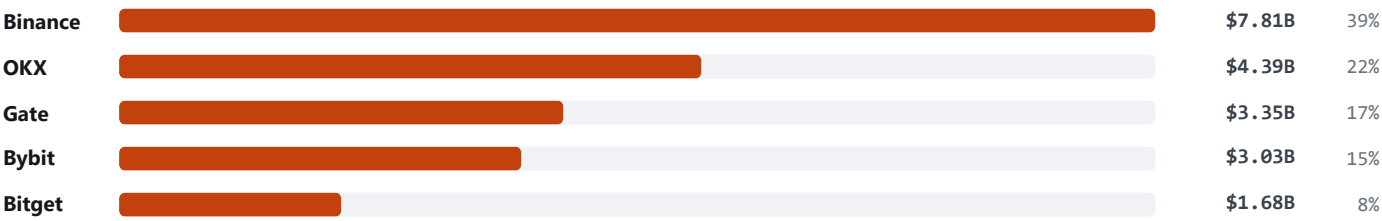

What every venue's price and volume did

The same two contracts on every exchange, for this UTC day. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

BITCOIN (BTC PERPETUAL)

$81,143.90 **-0.10%** $80,092.30 — $81,485.90

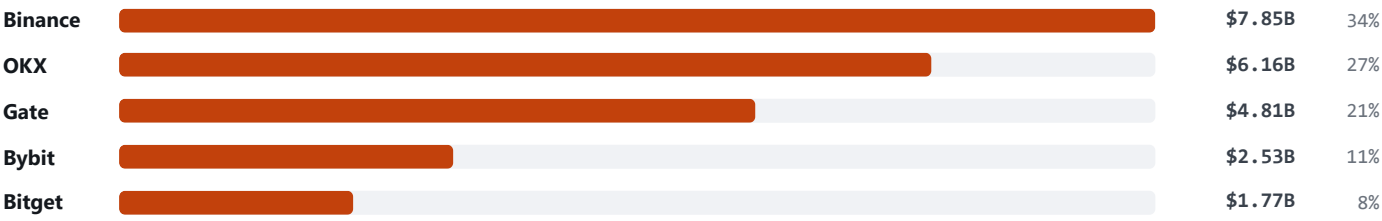

Spread: **$31.20** (0.0%) Total volume: **$20.26B**

ETHEREUM (ETH PERPETUAL)

$2,643.71 **+0.46%** $2,562.24 — $2,649.80

Spread: **$0.78** (0.0%) Total volume: **$23.11B**

All five exchanges (Binance, OKX, Bybit, Bitget, Gate) quoted identical prices throughout the day: Bitcoin at ~$81,140 (down 0.1%) and Ethereum at ~$2,643 (up 0.45%). Binance led volume both days (~$7.8B each for BTC and ETH), followed by OKX

at $4.4B (BTC) and $6.2B (ETH).

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bitget	+7.2%	$2.60B	–	–	–	–	$81,145.70
OKX	+10.1%	$2.45B	–	1.03	–	–	$81,139.20
Bybit	+11.0%	$4.56B	–	–	–	–	$81,136.80
Binance	+4.6%	$8.75B	–	0.94	2.07	–	$81,143.99
Gate	+4.3%	$5.19B	–	–	–	–	$81,144.81

ETHEREUM

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bybit	+11.0%	$2.26B	–	–	–	–	$2,643.03
Bitget	+5.6%	$2.03B	–	–	–	–	$2,643.43
OKX	+4.0%	$1.55B	–	1.09	–	–	$2,642.56
Binance	+8.9%	$6.21B	–	2.19	1.65	–	$2,643.51
Gate	+3.0%	$3.19B	–	–	–	–	$2,643.38

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

Bitcoin funding rates ranged 4.3–11% annualized (moderate bullish cost of carry), with open interest stable at ~$22.5B USD. Ethereum funding rates tracked similarly (3–11%), and open interest edged higher. On OKX, Bitcoin's long/short ratio held at 1.03 (balanced longs and shorts), while Binance tilted short at 0.94; Ethereum longs overwhelmed shorts on Binance at 2.19. Neither coin saw dramatic open-interest swings, indicating traders held through a day of narrow consolidation.

03 · BIGGEST MOVERS

The coins that moved the most

The largest moves on Binance for this UTC day, with the reason where the news supports one.

SAGAUSDT +50.7% · $141M vol · on Binance

SAGA surged 50.7% ($140.9M volume). No clear public news catalyst found; move appears driven by speculators or unverified social signals.

CS Gorkem T

CS Tarik O

GUSDT -39.3% · $550M vol · on Binance

G crashed 39.3% on $549.9M volume. No public announcement or news explaining the collapse.

BTWUSDT +26.8% · $78M vol · on Binance

BTW rallied 26.8% ($78.3M volume). No identifiable news or event tied to the move.

NEWLY LISTED / LOW-LIQUIDITY MOVERS

PTBUSDT +33.4% · EPICUSDT +22.5% · NILUSDT +22.2%

— 04 · STOCKS & COMMODITIES ON BINANCE FUTURES

Equities and commodities traded on Binance

Binance lists tokenised perpetuals for stocks (Korea, Hong Kong, China and the US) and commodities. The perp trades nearly around the clock, but the underlying market is open only a few hours — when it was closed, that is noted instead of showing drift as a daily move.

2026-09-20 was a weekend day—US equity markets and Asian cash exchanges were closed. Binance Futures perpetuals on Asian stocks (synthetic, not real-session exposure) rose modestly: South Korea's tech (SK Hynix +0.87%, Samsung +1.07%), Hong Kong AI (MiniMax +1.93%, CSOP SK Hynix 2x +1.84%), China semiconductors (CXMT +3.1%). US perps on semicon 3x leverage (SOXL) jumped +3.33%, Intel +3.13%. These reflect speculative positioning on offline indices—not genuine market opens.

05 · MARKET NEWS

CS Gorkem T

CS Tarik O

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

SEC approves five-year tokenized-stock trading exemption; Coinbase, Robinhood, Circle well-positioned

The U.S. Securities and Exchange Commission formally approved onchain trading of U.S. company shares as blockchain tokens. Tokenized shares must preserve dividends and voting rights; they can trade 24/7 via automated market makers. Coinbase already possesses most required features and stands to benefit most; Robinhood must add shareholder rights; Circle gains from USDC settlement demand. The exemption is five-year renewable.

USDC, tokenized stocks (no ticker) · 2026-09-20 07:00 · CoinDesk

Polymarket exposed for $10M fraud attempt; CEO ignored compliance, told staff to 'deal with fines later'

The prediction-market platform faced fraudsters using stolen debit cards to deposit, bet, and withdraw to untraceable accounts between February and mid-2026. Payment processor Checkout.com rejected >80% of Polymarket deposits (vs. 1% industry norm) as fraudulent. CEO Shayne Coplan reportedly downplayed the incident to staff, prioritizing user growth over compliance. The CFTC is investigating; regulators flagged the incident as evidence of cavalier risk culture.

ZetaChain votes to shut down Layer 1 and migrate ZETA token to Solana blockchain

ZetaChain's governance vote (99.4% approval, 58% participation) passed a proposal to retire the Layer 1 blockchain and issue ZETA as a Solana SPL token at 1:1 parity. No new tokens will be minted; vesting schedules and holder balances carry over. The team will focus on Anuma, its private AI application. A second vote will specify shutdown details (balance snapshot block, withdrawal instructions).

ZETA · 2026-09-20 11:38 · The Block

REGULATION AND POLICY

Visa closes meme coin credit-card-rewards loophole; transactions must be coded as crypto

Meme coin purchases were being processed under a merchant code intended for ordinary digital goods, allowing cardholders to earn standard credit-card rewards (points, cashback). Visa told payment processors, including Checkout.com, to stop accepting this classification, giving processors a grace period to wind down before next week. Meme coin buys will now be coded as crypto transactions and subject to standard crypto merchant rules.

Meme coins (no ticker) · 2026-09-20 08:54 · Decrypt

EU MiCA review threatens crypto staking yields; consultation open through September 30

The European Commission's ongoing Markets in Crypto-Assets (MiCA) review includes a question (item 66, page 36) on whether staking-service regulations are adequate. If tightened, new requirements could weaken provider yields and complicate earning staking rewards. The consultation deadline is September 30; no proposed license or capital requirement has been formally tabled yet.

EXCHANGE AND PLATFORM CHANGES

Gemini's stock collapses 80% from IPO; market value falls to $753M amid revenue and custody

CS Gorkem T

CS Tarik O

The crypto exchange's valuation has fallen from ~$4B at debut to $753M. Q2 trading revenue fell 38% YoY to $12[illegible] volume dropped to $3.8B; assets under custody halved from $18.2B to $8.4B. Although no active bid is known, the decline has revived takeover speculation, with potential acquirers eyeing Gemini's regulatory licenses, customer base, and custody infrastructure. The Winklevoss twins' 94.5% voting control would likely streamline any sale.

GEMI (stock ticker, not crypto) · 2026-09-20 08:48 · CoinDesk

UNCONFIRMED AND WATCH ITEMS

Offshore Bitcoin futures volume down 97% since 2021; traders shift to perpetuals and options

Traditional dated Bitcoin futures on offshore venues have collapsed from peak 2021 levels, reflecting a structural migration rather than a sudden crash. Perpetuals (never-expiring contracts) have absorbed most leverage trading; options increasingly handle hedging and downside protection. By January 2026, Bitcoin options open interest ($74.1B) exceeded futures ($65.2B) for the first time, signaling traders' preference for flexible derivatives over dated contracts.

CS Tarik O

07 · GLOSSARY

CS Gorkem T
CS Tarik O

Every term used today, in plain words

Annualized percentage rate (APR) — The yearly cost or return expressed as a percentage. Funding rates reported here as APR show what it would cost to hold a leveraged position for a full year.

Arbitrage (arb) — Exploiting price differences between venues (e.g., buying Bitcoin at one exchange and selling at another) or products (spot vs. futures) for near-risk-free profit.

Automated Market Maker (AMM) — A smart contract that lets traders swap cryptocurrencies against a liquidity pool rather than an order book. Used heavily in decentralized finance.

Basis — The difference between a futures contract's price and the spot price of the underlying asset. Positive basis (futures higher) encourages arbitrage selling.

Funding rate — A periodic fee exchanged between long and short traders on leveraged contracts to keep futures prices aligned with spot. Positive rates mean longs pay shorts (bullish sentiment); negative means shorts pay longs (bearish).

Layer 1 (L1) — A foundational blockchain network (e.g., Bitcoin, Ethereum). Distinguished from Layer 2 (L2) solutions that batch transactions to reduce costs.

Leverage / Leveraged position — Borrowing capital to control a larger position than your own cash allows. A 2x position means $1 of capital controls $2 worth of an asset; losses and gains are doubled.

Liquidation — Automatic forced closure of a leveraged position when losses exceed collateral, triggered at mark price. Liquidation cascades occur when one forced sale triggers others.

Long/short ratio — The proportion of traders betting price will rise (long) versus those betting it will fall (short). >1 means more longs; <1 means more shorts.

Mark price — The exchange's calculated fair price for a futures contract, used to trigger liquidations. Differs slightly from the last traded price to prevent manipulation.

Net flow — Daily inflows to an ETF minus outflows. Positive net flow (more buying) signals institutional confidence; negative (selling) suggests caution.

Open interest (OI) — The total notional value of all unfilled orders across all traders on a venue. Growth shows traders adding positions; shrinkage shows them closing.

Open-interest change — Growth or shrinkage of OI during a time period. Indicates whether traders are building (adding) or reducing (closing) positions.

Perpetual futures (perpetuals) — A never-expiring leveraged contract that tracks spot price closely via funding rates. Common on crypto exchanges; no settlement date.

Spot ETF — An exchange-traded fund holding actual Bitcoin or Ethereum (not futures). U.S.-regulated products with daily transparency and institutional custody.

Spot price — The current market price for immediate purchase. The 'real' price in the cash market (as opposed to derivatives prices).

Staking — Locking cryptocurrency in a Proof-of-Stake network to validate transactions and earn yield. Stakers replace miners in securing the blockchain.

Tokenized stocks — Traditional company shares issued as blockchain tokens, preserving dividend and voting rights. Can trade 24/7 via smart contracts on public blockchains.

Volume — The total notional value of trades executed in a time period, expressed in USD millions. Higher volume usually means tighter bid-ask spreads and deeper liquidity.

Whipsaw — A sudden sharp price move in one direction immediately followed by a reversal, catching traders off-guard and triggering stop-losses.
