— 01 · PRICE & VOLUME

What every venue's price and volume did

The same two contracts on every exchange, for this UTC day. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

BITCOIN (BTC PERPETUAL)

VENUE	CLOSE	CHANGE	HIGH	LOW	VOLUME
Bitget	\$86,169.90	–0.48%	\$86,688.00	\$85,071.50	\$2.86B

SUI Sui	\$0.9629	-4.63%	\$1.0376	\$0.9274	\$578M

Bitcoin closed at \$86,158 (down 0.48%) and Ethereum at \$2,752.69 (down 0.79%). Binance led volume on both, with \$14.6B in BTC volume and \$10.1B in ETH volume. All five major venues (Binance, Bybit, OKX, Bitget, Gate) agreed closely on prices throughout the day.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	MARK
Bitget	+8.5%	\$2.81B	—	—	\$84,385.50
OKX	-1.7%	\$2.48B	—	1.14	\$84,380.50
Bybit	-0.3%	\$5.01B	-0.1%	—	\$84,380.80
Binance	-0.9%	\$8.31B	-2.7%	0.90	\$84,378.60
Gate	+3.5%	\$5.13B	—	—	\$84,387.20

ETHEREUM

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	MARK
Bybit	+0.7%	\$2.20B	-5.7%	—	 CS Gorkem T \$2,676.43
Bitget	+7.8%	\$2.11B	—	—	\$2,676.32
OKX	-0.6%	\$1.64B	—	1.43	\$2,676.46
Binance	+5.1%	\$6.17B	-1.6%	2.41	\$2,676.61
Gate	+2.4%	\$2.93B	—	—	\$2,676.30

Funding, open interest and mark price are point-in-time (as of 22:00 UTC), not daily figures.

Bitcoin funding turned negative at most venues (Binance -0.92%, OKX -1.70%, Bybit -0.32%), though Bitget (+8.54%) and Gate (+3.50%) remained positive — suggesting shorts were rewarded and longs paid. Binance's BTC open interest fell 2.74%, the largest daily drop observed. Long/short ratio on Binance leaned slightly bearish at 0.90 (meaning more shorts than longs). Ethereum saw similar negative funding at OKX (-0.57%), Bybit (+0.70%), and Binance (+5.08%), with Binance ETH open interest down 1.58%. Overall: traders reduced bullish bets and shorts collected small daily fees.

03 · BIGGEST MOVERS

Platinum XPT	\$1,758.03	-4.27%	\$8M
Palladium XPD	\$1,273.90	-2.88%	\$5M

Korean stocks tumbled across the board: SK Hynix (−4.61%), Samsung (−2.04%), Hyundai (−3.46%), and LG Electronics (−4.57%) all declined. The KOSPI's profit-taking after earlier gains and concerns ahead of the Chuseok holiday weekend weighed on sentiment. Hong Kong AI names crashed hard — Zhipu AI (−14.65%), MiniMax (−7.72%), and Zhongji Innolight (−7.14%) — reflecting broader weakness in Chinese AI valuations and lock-up expiry concerns. China stocks were stable (Unitree −0.19%, CXMT −1.35%). These declines outpaced crypto pairs by 10–15x, indicating sector-specific distress in semiconductors and AI rather than broad crypto contagion.

05 · MARKET NEWS

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

Hashed anchors \$300M digital asset private credit fund targeting institutional financing gap

Crypto venture firm Hashed became anchor investor in a new private credit fund managed by Thoro Capital, aimed at lending to institutional digital asset firms using covenant-based underwriting. The fund settles in stablecoins and targets profitable crypto infrastructure companies locked out of traditional banking by capital requirements.

CFTC warns prediction markets that 'mention markets' carry heightened manipulation risk

The U.S. Commodity Futures Trading Commission (CFTC) issued a staff advisory designating prediction contracts based on whether specific words are mentioned as presumptively susceptible to manipulation. The contracts — betting on utterances in speeches or earnings calls — present risk because a person controlling the outcome could trigger or prevent it. The warning makes it harder for exchanges to self-certify these products.

Spot Bitcoin ETFs record \$714.7M net inflow; Ethereum ETFs see \$75.95M outflow on September 22

U.S. spot Bitcoin ETFs captured \$714.7M in net inflows on September 22, with BlackRock's iShares Bitcoin Trust (IBIT) accounting for \$350.3M. Ethereum spot ETFs recorded net outflows of \$75.95M, driven by redemptions at Fidelity FETH (–\$33.1M) and Bitwise ETHW (–\$22.3M). The divergence reflects Bitcoin strength among institutions and profit-taking in Ethereum positions.

INSTITUTIONAL FLOWS AND ETFs

Spot Bitcoin ETFs record \$714.7M net inflow; Ethereum ETFs see \$75.95M outflow on September 22

U.S. spot Bitcoin ETFs captured \$714.7M in net inflows on September 22, with BlackRock's iShares Bitcoin Trust (IBIT) accounting for \$350.3M. Ethereum spot ETFs recorded net outflows of \$75.95M, driven by redemptions at Fidelity FETH (–\$33.1M) and Bitwise ETHW (–\$22.3M). The divergence reflects Bitcoin strength among institutions and profit-taking in Ethereum positions.

BTC, ETH · 2026-09-22 (trading day, US Eastern) · [SoSoValue](#) / [Farside Investors](#)

ETF FLOWS

Bitcoin ETFs recorded \$714.7M net inflows; Ethereum ETFs saw \$75.95M net outflows. Bitcoin strength (led by BlackRock IBIT at +\$350.3M) indicates institutional accumulation, while Ethereum profit-taking suggests rotation out of the second-largest cryptocurrency.

07 · GLOSSARY

Every term used today, in plain words

Chuseok — A major Korean holiday in September or October (lunar calendar), similar to Thanksgiving. Markets often see light trading and profit-taking in the days leading up to it.

Covenant-based underwriting — A lending approach that focuses on the borrower's financial metrics (cash flow, profitability, operating ratios) rather than only collateral. Common in traditional business lending but novel in crypto, where most lending requires asset collateral.

Fear and Greed Index — A daily sentiment gauge ranging from 0 (Extreme Fear) to 100 (Extreme Greed). It combines market volatility, momentum, volume, and social signals. Extreme readings often precede reversals.

Funding rate — A small fee exchanged between traders in perpetual futures contracts to keep the contract price close to the spot price. When funding is positive, long traders (betting price up) pay shorts. When negative, shorts pay longs. High positive funding can signal overheating; negative funding can mean shorts are winning.

Futures contract — An agreement to buy or sell an asset (Bitcoin, Ethereum, a stock, etc.) at a set price on a future date. Futures traders never own the asset; they settle the price difference in cash.

KOSPI — The Korea Composite Stock Price Index, the main stock market index of South Korea, tracking companies listed on the Korean Exchange (KRX). Tech and semiconductors are major constituents.

Long/short ratio — The ratio of long positions (bets that price goes up) to short positions (bets that price goes down). A ratio above 1 means more longs; below 1 means more shorts. Extreme ratios can warn of crowding and potential liquidations.

Mark price — The reference price an exchange uses to settle perpetual futures and calculate funding. It sits between the spot price (cash market) and the futures last trade price to prevent manipulation.

Open interest — The total number of unsettled futures contracts (in coins or USD value) at an exchange at a point in time. Rising open interest can mean new money entering; falling open interest can mean traders closing positions (less conviction).

Open-interest change — The percentage move in total open interest over a day or period. A big drop signals traders exiting bets; a big rise signals new speculation.

Prediction market (mention market) — A betting contract where traders wager on whether a specific event will occur—for example, whether a word will be mentioned in a speech or earnings call. Manipulation risk arises because a person who knows or controls the outcome can profit unfairly.

Spot Bitcoin ETF — A fund that directly holds Bitcoin and trades on a stock exchange (like Nasdaq). Unlike Bitcoin futures ETFs, spot ETFs own the actual coins, so inflows/outflows reflect real Bitcoin buying/selling by institutional investors.
