NEUTRAL / MIXED

2026-10-18 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Bitcoin and Ethereum gained modestly on Sunday—0.76% and 0.31% respectively—as positive funding rates sustained bullish positioning, but major news from Richard Heart's arrest, a bridge exploit, and regulatory pushback against tokenized stocks cast shadows on confidence.

All five major venues (Binance, Bybit, OKX, Bitget, Gate) agreed on prices: Bitcoin closed around $82,078 (up 0.76%) and Ethereum around $2,409 (up 0.31%). Binance led volume decisively—$7.89 billion in BTC and $6.45 billion in ETH—roughly 50% more than the next exchange in each case.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

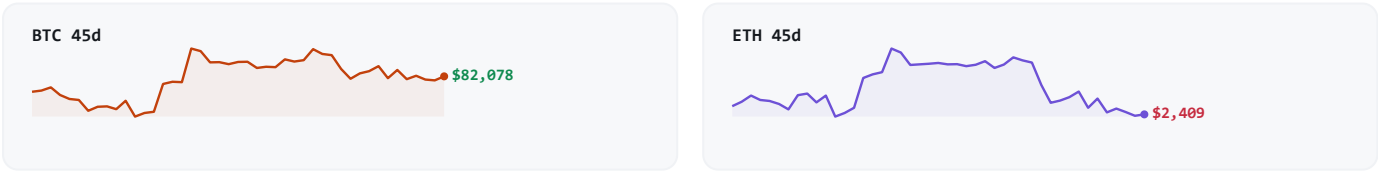

Traders leaned bullish: funding rates stayed positive at Binance (Bitcoin 5.4%, Ethereum 4.3% annualized), and long-to-short ratios favored bulls (Bitcoin 1.75 longs per short, Ethereum 3.08). Top traders also heavily long (Bitcoin 1.78, Ethereum 1.73). However, aggressive selling pressure showed up: taker buy/sell ratios fell below 1 (Bitcoin 0.92, Ethereum 0.89, meaning more selling than buying by takers), and only 39% of Binance perpetuals closed higher—most coins fell. Open interest stayed flat (Bitcoin -0.44%, Ethereum +0.31%), suggesting traders neither rushed to add positions nor suddenly closed them.

THE THREE THAT MATTERED MOST

SEC's tokenized stock framework faces issuer pushback as nine firms object to OKX-ICE trading

Nine companies—including Broadcom, Verizon, CoreWeave, and UnitedHealth—formally objected to OKX and ICE's plan to tokenize their shares under the SEC's five-year Innovation Exemption. The venue planned to support 63 stocks with around-the-clock blockchain-based trading. Issuers can block tokenization under the exemption's built-in objection mechanism.

Cysic bridge loses $727k in attack; attacker mints 10 million CYS tokens

An attacker exploited a database vulnerability in Cysic's cross-chain bridge on October 17 to create 10 million CYS tokens fraudulently, selling 7.2 million and bridging roughly $727k in proceeds to Ethereum. Cysic blacklisted the attacker's address 76 minutes later and suspended bridge operations. The company says the incident was limited to bridge processing and did not affect the mainnet.

07 · GLOSSARY

CS Gorkem T
CS Tarik O

Every term used today, in plain words

Basis — The difference between the spot price (real-time price for immediate delivery) and the futures price (contract price for future delivery). Positive basis means futures trade above spot.

Breadth (market breadth) — The percentage of all tradable contracts that closed higher on the day. Higher breadth means more coins/tokens are winning; lower breadth signals broad weakness.

Funding rate — A periodic fee traders pay each other to keep long or short positions open in perpetual futures contracts. Positive rates mean longs pay shorts (bullish signal); negative rates mean shorts pay longs (bearish signal). Expressed as an annualized percentage.

Long/short ratio — The number of long-contract holders divided by short-contract holders at a given exchange. Above 1 means more traders bet on a price rise; below 1 means more bet on a price fall.

Mark price — The official price used to settle funding payments and liquidations in perpetual futures, calculated from spot price and a funding component. Prevents extreme disconnect from real markets.

Net flows (ETF flows) — The difference between money flowing into and out of exchange-traded funds or similar products. Positive flows indicate investor buying; negative flows indicate investor selling.

Open interest — The total number of open long or short positions in a futures market. Rising open interest means traders are opening new positions; falling open interest means traders are closing positions.

Perpetuals (perps) — Futures contracts with no expiration date. Traders hold positions indefinitely and pay/receive periodic funding fees to keep the contract price close to the spot price.

Taker buy/sell ratio — A measure of aggressive buying versus selling. Calculated as aggressive buys divided by aggressive sells. Above 1 means more aggressive buying; below 1 means more aggressive selling. (Takers execute market orders; makers post limit orders.)

Top position ratio — The long-to-short ratio among the largest traders (whales) at an exchange, not all accounts. Shows whether big money is betting on up or down moves.
