STRONG BEARISH

2026-11-13 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Bitcoin and Ethereum both fell 4.4% on November 13 to hit 12-week lows as the US dollar strengthened on rising interest-rate expectations and investor capital flowed toward Anthropic's blockbuster IPO.

† this venue's UTC-day candle was unavailable — its figures are the rolling 24 hours.

All five major venues (Binance, Bybit, OKX, Bitget, Gate) agreed closely on price, with Bitcoin trading around $68,350–$68,400 and Ethereum around $1,934. Binance led volume by far, with $19.4 billion in Bitcoin turnover and $11.3 billion in Ethereum —roughly double the other venues combined.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Gate	**+11.0%**	$1.43B	—	—	—	—	$1,934.49

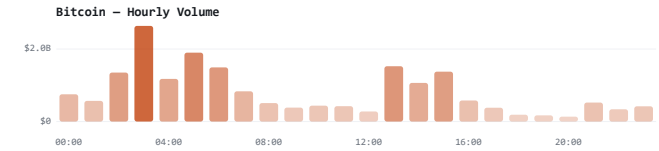

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

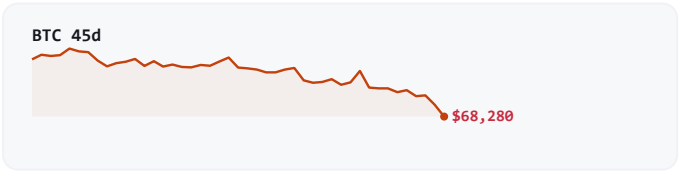

Bitcoin long traders outnumbered short traders 3.18-to-1, with the largest traders at a 2.31-to-1 long bias, suggesting big money still expected higher prices. However, taker traders were slightly more aggressive sellers (0.91 ratio, below 1.0), indicating retail selling pressure. Bitcoin open interest dropped 7%, and liquidations exceeded $1.6 billion—showing overleveraged traders forced to close positions. Ethereum echoed the pattern: 3.5-to-1 long bias, top traders 1.83-to-1 long, but -5% open-interest decline. Despite the crash, funding rates stayed elevated on some venues (Bybit 10.95% annualized), reflecting long traders still paying shorts to hold. Market breadth deteriorated sharply: only 26% of Binance perpetuals were up. The Fear & Greed index fell from 28 (Fear) to 20 (Extreme Fear).

THE THREE THAT MATTERED MOST

Bitcoin plunges to $68,000 as Anthropic IPO frenzy adds to market jitters

Bitcoin fell below $70,000 for the first time since August as investors redirected capital toward Anthropic's anticipated blockbuster IPO (targeting $1.4 trillion valuation) and the US dollar rallied on expectations of higher interest rates from the Federal Reserve. Analysts noted the capital shift to Anthropic and broader risk-off sentiment, with liquidations exceeding $1.6 billion.

Bitcoin firm Nakamoto owes Kraken $165 million, more than its entire market value

Nakamoto, a public Bitcoin treasury firm, owes Kraken $165 million USDT (due June 30 and Dec 4, 2027) while its market value stood at ~$104 million on Nov 13. Approximately 70% of Nakamoto's Bitcoin—3,030 of 4,283 coins purchased near $118,000 each—are pledged as collateral; at Nov 13 prices below $69,000, the margin is narrowing rapidly. A sister firm, BTCS, also sold Ethereum at a loss on Nov 13 to maintain a $64 million Aave loan, highlighting emerging leverage stress across Bitcoin treasury companies.

US courts target $1.2 billion in stolen Binance funds as DOJ escalates crypto enforcement

The US Department of Justice secured court authorization to seize $1.2 billion of the $6.3 billion stolen in the October 29 Binance hack, attributed to North Korean military-linked hackers. More than $2.7 billion of the stolen crypto has already been frozen through coordinated efforts; however, the DOJ announcement on Nov 12 did not provide a timeline for returning funds to victims. Separately, federal agents seized infrastructure used in the 'FaceStealer' scheme, which stole over $400 million in a separate operation.

07 · GLOSSARY

CS Gorkem T

CS Tarik O

Every term used today, in plain words

Collateral — Assets pledged as security for a loan. If the asset falls in value below a certain level, the lender can take it, forcing the borrower to close their position.

Fear & Greed Index — A measure of market sentiment ranging from 0 (Extreme Fear) to 100 (Extreme Greed). Low values signal widespread worry; high values signal overconfidence.

Funding rate — A periodic payment between traders on futures exchanges. If funding is positive, long traders pay short traders to hold their bets. A high funding rate means long traders are very confident (and paying a high price to hold).

Liquidation — When a leveraged trader's position is forcibly closed because their collateral fell below the minimum required. The exchange automatically sells their assets, often at a loss.

Long / short ratio — The ratio of traders betting prices will rise (longs) versus traders betting prices will fall (shorts). A ratio above 1.0 means more longs; below 1.0 means more shorts.

Mark price — The reference price used to calculate whether a leveraged trader is close to liquidation. It is typically the average of the spot price and the futures price, and is less likely to be manipulated by a single trade than the last price.

Market breadth — The percentage of assets in a market that are rising versus falling on a given day. High breadth (many coins up) signals broad health; low breadth (few coins up) signals weakness.

Open interest — The total value of all open futures contracts on an exchange. Rising open interest means traders are adding new bets; falling open interest means positions are closing (often forced liquidations).

Open-interest change — The percentage increase or decrease in total open interest over a day or time period. A large drop signals heavy liquidations or traders exiting en masse.

PPI (Producer Price Index) — A measure of inflation at the wholesale level—how much prices have risen for goods and services before they reach consumers. The Federal Reserve watches this to decide whether to raise interest rates.

Taker buy/sell ratio — The ratio of aggressive buyers (takers who buy at the ask price) versus aggressive sellers (takers who sell at the bid price). A ratio below 1.0 means more aggressive sellers; above 1.0 means more aggressive buyers.

Top-position ratio (top trader long/short ratio) — The long-to-short ratio among the largest traders on an exchange, as opposed to all traders. This shows what the biggest money is betting on and is often used as a signal of smart-money direction.
