Binance led volume with $9.41 billion in BTC and $6.64 billion in ETH trading. Prices clustered tightly across all five major exchanges—Bitcoin around $81,250–$81,300 and Ethereum around $2,346–$2,347—showing strong agreement on fair value.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 15:00 UTC), not daily figures.

Bitcoin funding remained elevated at 10.95% annualized (OKX 10.90%), while open interest grew 1.6%, signaling conviction among longs. The long-to-short account ratio was 2.06:1 on Binance, with the largest traders even more bullish at 1.93:1, but the taker buy/sell ratio of 0.96 showed slightly more aggressive selling. Ethereum followed a similar pattern: 10.38% funding, OI up 0.79%, heavily long at 3.06:1 overall and 1.73:1 among whales, with a 1.02 taker ratio indicating slight buying edge. Breadth was positive: 57.1% of Binance perps closed higher. The Fear & Greed Index held neutral at 51, up from 48 the prior day.

03 · BIGGEST MOVERS

The coins that moved the most

The largest moves on Binance for this UTC day, with the reason where the news supports one.

IDOLUSDT +69.9% · $59M vol · on Binance

No clear public cause. Idol (IDOL) surged 69.88% with $59 million in volume, possibly reflecting exchange listing activity or speculative buying in smaller-cap alts.

QUSDT +29.6% · $328M vol · on Binance

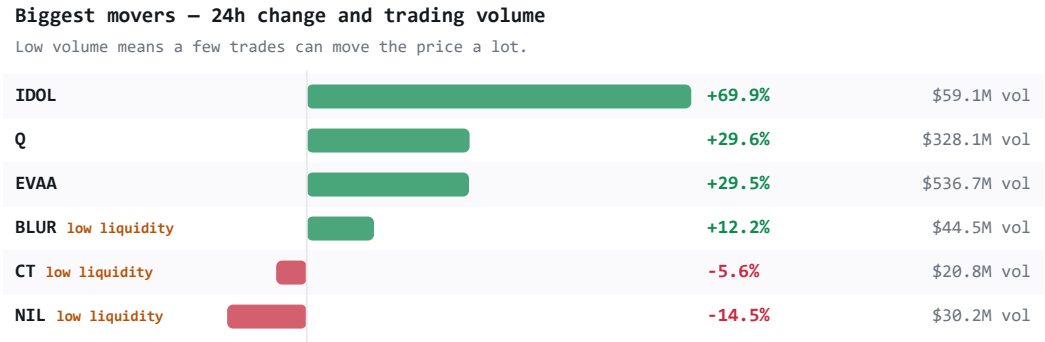

No clear public cause. Q rose 29.58% on $328 million volume. The move aligns with broad altcoin strength but lacks confirmed catalysts.

EVAAUSDT +29.5% · $537M vol · on Binance

No clear public cause. EVAA gained 29.47% on $537 million volume as part of a broader smaller-cap altcoin rally, with no obvious news driver.

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

Federal Reserve holds rates steady; two officials dissent, favoring a hike

The Federal Reserve's policy committee (FOMC) kept the federal funds rate at 4.00%, but Governor Lisa Cook and Cleveland Fed President Beth Hammack dissented in favor of a 0.25% rate increase. Dissents are rare and signal internal debate over inflation persistence. The outcome met market expectations but the dissent underscores policy uncertainty heading into December.

Bitwise publishes Bitcoin valuation model: $1.6M base case by 2036, up to $3.67M in bull scenario

Bitwise released institutional research projecting 34% annualized Bitcoin returns through 2036, with a base case of $1.6 million, bear case of $130,686, and bull case of $3.67 million. The framework models gold and Bitcoin demand absorption as sources of long-term value creation. The analysis provides institutional investors with a multi-decade allocation thesis amid record ETF adoption.

07 · GLOSSARY

CS Gorkem T
CS Tarik O

Every term used today, in plain words

Annualized funding rate — The annual percentage yield of funding payments in perpetual futures, calculated by multiplying the 8-hourly funding rate by 365÷8 (or similar). Shows the cost of holding leveraged positions long (or earning yield on shorts) over a full year.

Basis — The reporting period for price and volume statistics. 'UTC-day' means the figures cover one calendar day from 00:00–23:59 UTC.

Breadth — The percentage of assets in a market that closed higher (or lower) on the day. 57% breadth means more than half of all tokens rose, indicating broad-based strength.

Fear & Greed Index — A sentiment gauge ranging from 0 (extreme fear) to 100 (extreme greed), based on volatility, momentum, social media activity, and market dominance. Used to gauge retail emotion and risk appetite.

Funding rate — Periodic payment between long and short traders in perpetual futures contracts. When funding is positive, longs pay shorts. High funding suggests strong bullish sentiment and risk of a sharp reversal.

Long-to-short ratio — The ratio of open long positions to short positions among all traders (account ratio) or among the largest traders (top position ratio). A ratio above 1 means more traders are betting on a price rise.

Mark price — The reference price used for liquidation and funding calculations on futures exchanges, typically derived from spot prices and recent trades. It prevents manipulation relative to actual tradable last prices.

Open interest — The total value of all open long and short positions in perpetual futures. An increase signals fresh capital flowing into leveraged trading; a decrease suggests positions are being closed.

Open-interest change — The percentage shift in total open interest over a period. A 1.6% rise means new capital entered leveraged positions (or existing positions grew in value).

Taker buy/sell ratio — The ratio of market-taker buy volume to sell volume. Above 1.0 means more aggressive buying (buyers hitting the ask); below 1.0 means more aggressive selling (sellers hitting the bid). A ratio of 0.96 shows slightly more aggressive selling.
