DAILY MARKET REPORT

Thursday, 15 October 2026

NEUTRAL / MIXED

2026-10-15 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Bitcoin and Ethereum climbed modestly, but surging US factory inflation sparked liquidations and sharp losses in altcoins and Asian tech stocks as traders repriced rate-hike risk.

TOTAL MARKET CAP	BTC DOMINANCE	ETH DOMINANCE	FEAR & GREED	MARKET BREADTH
$2.78T	**59.3%**	**10.7%**	**53 — Neutral**	**50%**
-2.13%			prev 62	399 up / 390 down

01 · PRICE & VOLUME

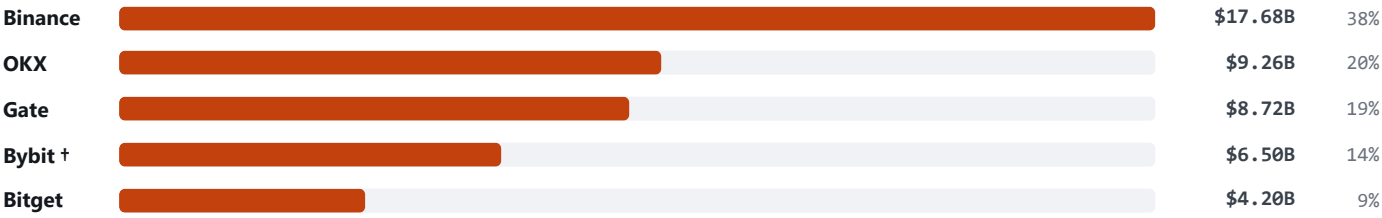

What every venue's price and volume did

The same two contracts on every exchange, for this UTC day. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

BITCOIN (BTC PERPETUAL)

$82,195.40 +0.68% $79,725.30 — $82,666.00

Spread: **$24.00** (0.0%) Total volume: **$46.36B**

ETHEREUM (ETH PERPETUAL)

$2,441.00 +0.83% $2,313.39 — $2,467.00

Spread: **$1.47** (0.1%) Total volume: **$38.04B**

ALTCOINS

COIN	CLOSE	CHANGE	HIGH	LOW	VOLUME
SOL Solana	$105.38	+1.09%	$106.49	$100.51	$2.33B
XRP XRP	$1.3343	+0.25%	$1.347	$1.2831	$926M
BNB BNB	$730.06	-0.11%	$735.52	$708.00	$423M
DOGE Dogecoin	$0.0811	-0.88%	$0.08204	$0.07744	$555M
ADA Cardano	$0.2298	-0.04%	$0.2322	$0.2155	$211M
AVAX Avalanche	$10.037	+0.25%	$10.088	$9.325	$169M
LINK Chainlink	$12.456	+0.23%	$12.603	$11.817	$164M
SUI Sui	$1.0363	+1.36%	$1.0429	$0.9583	$334M

† this venue's UTC-day candle was unavailable — its figures are the rolling 24 hours.

Bitcoin rose 0.68% to close at $82,195 on Binance, while Ethereum gained 0.83% to $2,441; all five major exchanges (Binance, Bybit, OKX, Bitget, Gate) posted similar price action. Binance led volume for both assets with $17.7 billion in Bitcoin trading and $12.9 billion in Ethereum, while Gate and OKX handled roughly $8.7 billion and $9.3 billion respectively.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bitget	+3.8%	$2.79B	–	–	–	–	$82,200.20
Gate	+9.3%	$4.13B	–	–	–	–	$82,199.34
Bybit	+11.0%	$4.78B	–	–	–	–	$82,197.40
OKX	+4.7%	$2.44B	–	1.57	–	–	$82,193.00
Binance	+5.9%	$7.74B	–	1.77	1.54	0.97	$82,194.90

ETHEREUM

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bybit	+11.0%	$1.91B	—	—	—	—	$2,440.93
Bitget	+7.0%	$1.91B	—	—	—	—	$2,440.80
Binance	+8.2%	$5.52B	—	3.37	1.61	0.91	$2,441.76
OKX	+7.9%	$1.40B	—	1.95	—	—	$2,441.33
Gate	+6.1%	$1.91B	—	—	—	—	$2,441.89

CS Gorkem T

CS Tarik O

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

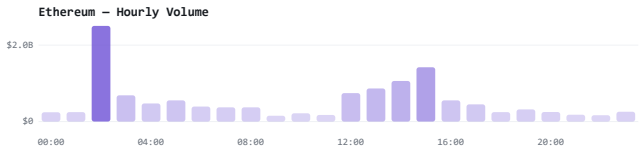

Bitcoin futures funding averaged 5.94% annualized (Binance), Ethereum 8.18% — moderate rates showing bulls willingly paid bears to hold longs. Binance data shows Bitcoin traders held 1.77 long positions for every short (the largest traders held 1.54-to-1 long bias), and Ethereum held 3.37-to-1 (largest traders 1.61-to-1) — heavy long positioning in both. However, taker buy/sell ratios tell a different story: Bitcoin traders' aggressive selling ratio was 0.97 and Ethereum's 0.91, both below 1.0, meaning more traders were aggressively selling than buying despite the long bias. Market breadth was 50.31% up — nearly perfectly balanced, suggesting indecision until the inflation shock hit at noon UTC. Altogether, traders were overextended on leverage before the PPI surprise flipped their confidence.

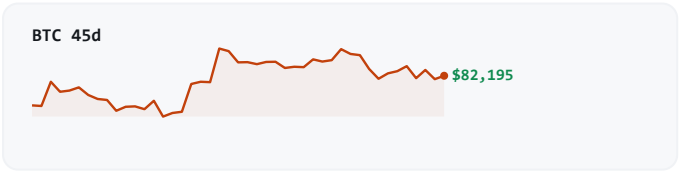

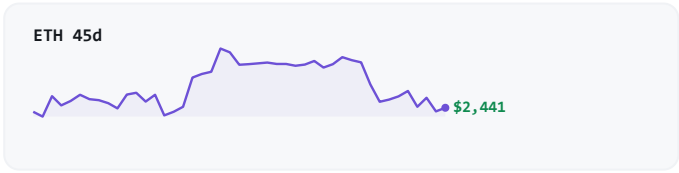

Funding Rate (annualised)

	Bitget	Gate	Bybit	OKX	Binance
BTC	+3.8%	+9.3%	+11.0%	+4.7%	+5.9%
ETH	+7.0%	+6.1%	+11.0%	+7.9%	+8.2%

03 · BIGGEST MOVERS

The coins that moved the most

The largest moves on Binance for this UTC day, with the reason where the news supports one.

AGTUSDT +113.5% · $218M vol · on Binance

AGT surged 113.5% with $218 million in volume; no clear public announcement or news explanation found.

SIRENUSDT +46.6% · $103M vol · on Binance

SIREN jumped 46.6% on $103 million volume; no identifiable catalyst in market news or announcements.

TRUTHUSDT -26.1% · $79M vol · on Binance

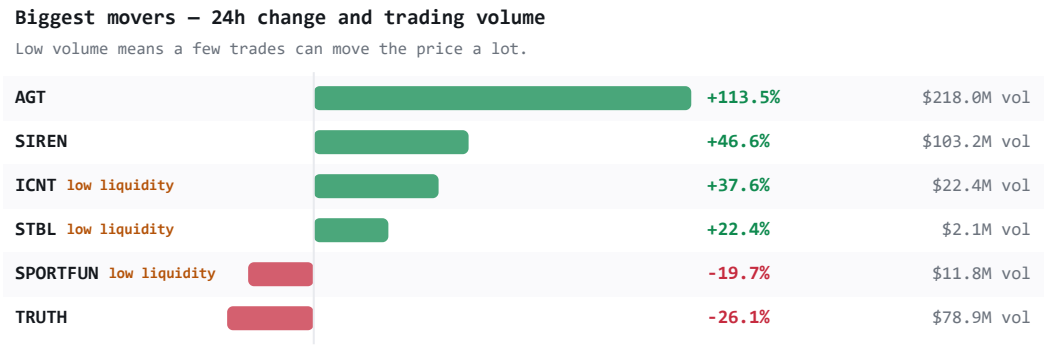

TRUTH fell 26.1% on $79 million volume; no public cause identified in available news or data.

Asian equity perps plummeted as the AI-chip valuation scare spread overnight. South Korea's top chipmakers bore the brunt: SK Hynix fell 1.6%, Samsung split between contracts (–0.5% to –2.6%), and smaller players like Hanmi dropped 7%. Hong Kong's AI-focused names—Zhipu AI (–4.8%), MiniMax (–7.1%)—dumped, though defensive plays like Xiaomi (+5%) and Tencent (+1%) held up. Chinese stocks barely moved. US small-caps were mixed-positive. Commodities rallied on geopolitical headlines: WTI Crude +2.6%, gold +1.1%, silver +2.4%, offsetting weakness in copper (–0.8%) and natural gas (–2.1%).

05 · MARKET NEWS

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

US Producer Price Index surges 1.3% month-over-month, triggering $940M crypto liquidation wave

September 2026 producer inflation jumped to 1.3% month-over-month (forecast 0.6%) and 6.3% year-over-year (forecast 5.4%), marking the largest monthly gain since March 2022. Energy prices drove 80% of the increase due to geopolitical tensions including the Iran conflict. The shock raised expectations the Federal Reserve will keep interest rates higher longer, immediately sparking a wave of margin liquidations in crypto as leveraged traders were forced to close positions, with nearly $940 million in crypto liquidations reported by day's end.

BTC, ETH, altcoins · 2026-10-15 12:30 UTC · US Bureau of Labor Statistics / Walter Bloomberg (X) / Bloomberg, CNBC, CNN

South Korea's KOSPI index plummets 7.57–8%, halts trading, on AI-chip valuation collapse

South Korea's KOSPI benchmark fell 7.57–8% on October 15, hitting a 6-month low and triggering an automatic 20-minute trading halt when losses exceeded 8% from the prior close. The crash centered on semiconductor giants: Samsung fell up to 9.5%, SK Hynix 1.6% as investors repriced AI hyperscaler spending risk and feared oversupply from Chinese chipmakers. The index has now fallen for seven consecutive trading days. The move rippled into global crypto and altcoin trading during Asian hours, dragging down Solana, XRP, and smaller caps that track risk sentiment.

Ledger unveils Atom Android security device with anti-tamper detection, shipping summer 2027

Ledger announced Atom, a 6.77-inch Android-based hardware wallet with built-in AMOLED display, Qualcomm processor, tamper detection (active even when powered off), and AI agent approval controls. Pricing: $849 Founders Edition, $899 regular, shipping Q3 2027. Integration with Solana Mobile confirmed. The device represents Ledger's response to a major trust crisis: compromised wallets sold through an unauthorized Asian reseller resulted in an $86 million cryptocurrency theft. The unveil signals the company's attempt to restore confidence in hardware wallet security.

CS Tarik O

Every term used today, in plain words

Annualized percentage — A percentage rate calculated as if it applied for a full year. For example, a funding rate of 0.00005429 (per 8-hour period) annualizes to ~5.94% by multiplying by the number of 8-hour periods in a year.

Basis — The type of time period used to calculate daily price changes. 'UTC-day' means the data covers midnight to midnight in Coordinated Universal Time (UTC). 'Rolling-24h' means a continuous 24-hour window.

Breadth — The percentage of all assets in a market that rose in price during the day. 50% breadth means roughly equal numbers of winners and losers.

CARF — Common Reporting Standard for Crypto Assets. An OECD framework for countries to share information about cryptocurrency account holders' identities and transactions for tax purposes, similar to the long-standing FATCA standard for bank accounts.

CBDC — Central Bank Digital Currency. A digital version of a country's official money, issued and controlled by the central bank rather than by commercial banks or private companies.

Circuit breaker — An automatic trading halt triggered when an index or market falls by a preset percentage (e.g., 8% on South Korea's KOSPI) within a short time. The halt pauses trading for 5–20 minutes to prevent panic selling.

ETF — Exchange-Traded Fund. A fund that holds Bitcoin or Ethereum and trades on a stock exchange like a regular stock. Net inflow means investors are buying the fund; net outflow means they are redeeming shares.

Funding rate — An 8-hour interest payment between long and short traders in perpetual futures. Positive rates mean longs pay shorts (bullish sentiment); negative rates mean shorts pay longs (bearish sentiment). Annualized, these small rates add up.

Hardware wallet — A physical device (like a USB stick or smart card) that stores cryptocurrency private keys offline, away from the internet. Examples: Ledger, Trezor. Supposed to be tamper-proof.

Hyperscaler — A massive technology company (e.g., Google, Amazon, Microsoft, Meta) that builds and operates huge data centers. In 2026, hyperscalers are the biggest spenders on artificial intelligence infrastructure.

Liquidation — When a trader's margin position is forcibly closed because losses exceed their collateral. In crypto, a liquidation cascade happens when many leveraged traders are forced to sell at once, often triggered by a rapid price drop.

Long/short ratio — The ratio of how many traders are betting on prices going up (long) versus down (short). A ratio of 1.77 means 1.77 long bets for every 1 short bet, indicating more bullish sentiment.

Margin — Borrowed money used to increase the size of a position. A trader with $1,000 and 10× margin can control $10,000 of Bitcoin. If Bitcoin drops 10%, the trader loses everything. Margin trading is risky.

Mark price — The reference price used to calculate profit/loss on a perpetual futures contract. It's designed to prevent manipulation by averaging recent trades and the underlying spot price.

Open interest — The total number of unfilled long and short contracts open in a market (measured in coins or in dollars). Rising open interest suggests traders are building new positions; falling suggests they are closing them.

Perpetual futures (perp) — A futures contract with no expiration date, allowing traders to bet on future price movements with leverage. Unlike standard futures, perps use a funding rate instead of a settlement date.

Point-in-time — Data captured at a single specific moment (e.g., 00:00 UTC on October 15). Funding rates and open interest are point-in-time; they change continuously. Do not compare them across different times without noting the time difference.

Real-world asset (RWA) — A physical or traditional financial asset (e.g., stocks, bonds, commodities, real estate) that is tokenized and traded on a blockchain.

Taker buy/sell ratio — A ratio of aggressive market buy orders to aggressive market sell orders. Above 1.0 means more buying pressure; below 1.0 means more selling pressure. A ratio of 0.97 means slightly more aggressive sellers.

Top-position ratio — The long-to-short ratio among the largest traders (the top 10% by account size) in a market. A higher ratio (e.g., 1.54) indicates the biggest players are betting bullish.

How this report is built

CS Gorkem T

CS Tarik O

Price and volume from each venue's daily (1d) kline bounded to the UTC day. Funding, open interest and m… point-in-time snapshots. Long/short and taker ratios from Binance. Market cap and dominance from CoinGecko. Fear & Greed from Alternative.me. News from public RSS feeds, verified via web search. Calendar from Investing.com. Traditional markets from Twelve Data.
