Bitcoin converged tightly around \$84,313–84,327 across all five major venues, with Binance leading volume at \$14.6 billion USD. Ethereum similarly showed tight agreement near \$2,671–2,672, with Binance accounting for \$10.1 billion of the \$29.8 billion total venue volume.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	MARK
Bitget	+8.2%	\$2.81B	—	—	\$84,327.10

Gate	+1.8%	\$2.92B	—	—	\$2,671.51

Funding, open interest and mark price are point-in-time (as of 21:20 UTC), not daily figures.

Funding rates diverged: Bitget offered +0.82% annualized borrowing rewards for longs, while Binance, OKX, and Bybit charged small negative rates (-1.68%, -2.10%, -1.14% respectively), signaling mild neutral-to-bearish sentiment. Open interest declined notably, especially on Binance (-2.74% for Bitcoin), suggesting traders were closing positions rather than adding to bets. Long/short account ratios split: OKX traders favored longs (1.14 longs per short on Bitcoin), while Binance showed more shorts (0.90 longs per short), indicating disagreement about direction.

THE THREE THAT MATTERED MOST

CFTC warns 'mention market' prediction contracts carry heightened manipulation risk

The U.S. Commodity Futures Trading Commission issued an advisory on September 22 stating that prediction-market contracts based on whether someone will "mention" specific words are at high risk of being rigged. The CFTC said these contracts are hard

to verify fairly because their outcome depends on someone's voluntary action, not independent data. Exchanges offering these contracts must check that they meet rules against manipulation.

SEC censures OTC Link LLC for repeated compliance failures, orders \$575,000 penalty

The Securities and Exchange Commission fined OTC Link LLC \$575,000 on September 22 for failing to maintain proper security and access controls from August 2016 through March 2025. Despite multiple SEC examinations flagging the same problems, the firm repeatedly delayed fixes, the enforcement order states. This shows the SEC is actively monitoring trading infrastructure for negligence.

Crypto VC Hashed anchors new \$300 million digital-asset private credit fund

Hashed, a major cryptocurrency venture firm, announced on September 22 that it is backing a \$300 million private credit fund designed to lend money to crypto businesses based on their financial health and cash flow rather than collateral. The fund, managed by Thoro Capital Management, aims to fill a financing gap for institutional digital-asset firms. This signals continued institutional capital moving into structured crypto lending.

07 · GLOSSARY

Every term used today, in plain words

Basis — The calendar period used to measure price changes or volume—usually 'utc-day' (midnight UTC to midnight UTC) or '24h' (rolling 24 hours).

Fear and Greed Index — A sentiment meter (0–100) that measures whether traders are fearful (close to 0) or greedy (close to 100). 71 = 'Greed'; 78 = 'Extreme Greed.' Higher readings suggest more bullish appetite; lower readings suggest caution.

Funding rate — A borrowing cost paid by traders on leveraged crypto futures. A positive rate means long traders pay short traders (bullish conditions, longs are expensive). A negative rate means short traders pay long traders (bearish conditions, shorts are expensive). Rates are typically tiny (0.01–0.1% per 8-hour period) and annualized for reporting.

Long/short ratio — The number of traders betting price will go up (longs) divided by traders betting price will go down (shorts). A ratio of 1.5 means 1.5 longs for every 1 short; 0.9 means more shorts than longs.

Mark price — The reference price used to calculate profit/loss on a perpetual futures contract. It is typically the spot price plus a small funding adjustment, and it differs from the last-traded price to prevent manipulation.

Open interest — The total number of unsettled (open) futures contracts at an exchange. When open interest rises, traders are adding new positions; when it falls, traders are closing positions.

Open-interest change — The percentage gain or loss in total open contracts over a period (usually one day). A –2.74% change means 2.74% fewer open positions than at the start of the day.

Volume — The total USD value of all trades executed on an exchange in a given period. Higher volume usually signals stronger conviction and lower risk of surprise price moves.
