DAILY MARKET REPORT

Sunday, 1 November 2026

NEUTRAL / MIXED

2026-11-01 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Bitcoin and Ethereum rose about 1% on November 1st as Binance reopened after the record $6.3 billion hack, triggering immediate $3.64 billion in customer withdrawals and rising market fear.

TOTAL MARKET CAP	BTC DOMINANCE	ETH DOMINANCE	FEAR & GREED	MARKET BREADTH
$2.62T	**60.1%**	**10.6%**	**34 — Fear**	**53%**
-2.89%			prev 30	423 up / 373 down

01 · PRICE & VOLUME

What every venue's price and volume did

The same two contracts on every exchange, for this UTC day. When the prices line up, nothing unusual is happening; a gap or a big volume difference is worth noticing.

BITCOIN (BTC PERPETUAL)

$78,313.00 +1.02% $77,457.90 — $78,388.00

Spread: **$13.00** (0.0%) Total volume: **$10.37B**

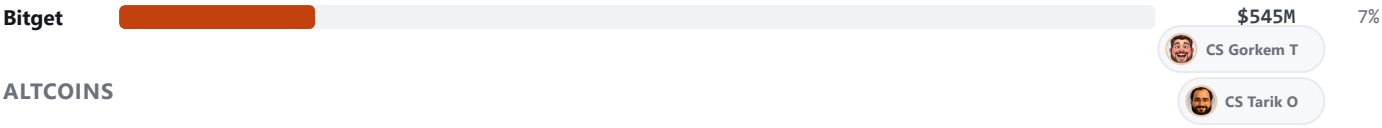

Binance	$4.26B	41%
OKX	$2.19B	21%
Gate	$1.56B	15%
Bybit	$1.50B	14%
Bitget	$855M	8%

ETHEREUM (ETH PERPETUAL)

$2,274.27 +0.88% $2,244.48 — $2,278.00

Spread: **$0.30** (0.0%) Total volume: **$8.04B**

Binance	$2.89B	36%
OKX	$2.22B	28%
Gate	$1.68B	21%
Bybit	$702M	9%

ALTCOINS

COIN	CLOSE	CHANGE	HIGH	LOW	VOLUME
SOL Solana	$94.51	-0.97%	$95.95	$93.13	$793M
XRP XRP	$1.2507	-0.05%	$1.2603	$1.2423	$274M
BNB BNB	$713.06	+1.26%	$718.38	$702.50	$341M
DOGE Dogecoin	$0.07548	-0.13%	$0.07604	$0.07456	$148M
ADA Cardano	$0.193	+0.10%	$0.1943	$0.1904	$52M
AVAX Avalanche	$8.695	+1.52%	$9.047	$8.517	$120M
LINK Chainlink	$11.394	-2.22%	$11.864	$11.233	$117M
SUI Sui	$0.9004	+0.17%	$0.909	$0.8857	$81M

Bitcoin rose 1.02% to close at $78,313 and Ethereum gained 0.88% to $2,274, with all major exchanges in close agreement on prices. Binance led volume for both: Bitcoin $4.26 billion (largest across venues) and Ethereum $2.89 billion.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

BITCOIN

VENUE	FUNDING (ANN.)	OPEN INTEREST	OI CHANGE	LONG/SHORT	TOP L/S	TAKER B/S	MARK
Bitget	+7.1%	$2.85B	–	–	–	–	$78,382.30
OKX	+11.0%	$2.66B	–	2.35	–	–	$78,391.60
Bybit	+10.6%	$5.35B	-1.0%	–	–	–	$78,387.00
Binance	+11.0%	$7.47B	–	2.57	1.68	0.99	$78,392.35
Gate	+5.9%	$4.59B	–	–	–	–	$78,383.60

Binance	+1.4%	$5.38B	—	2.81	1.55	0.93	$2,281.60
Gate	-18.2%	$1.64B	—	—	—	—	$2,281.27

CS Gorkem T

CS Tarik O

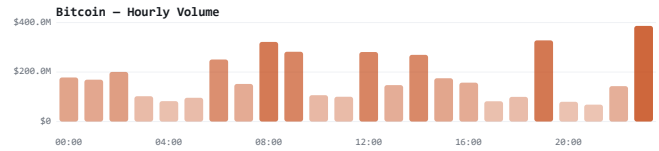

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

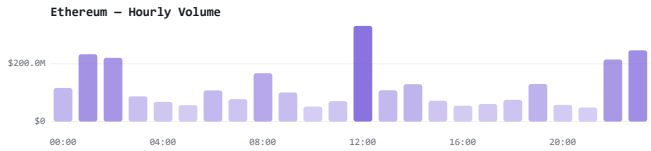

Traders were heavily positioned for price increases. On Bitcoin, there were roughly 2.57 long positions for every 1 short position (meaning 2.57 traders betting up for each betting down), while Ethereum was even more bullish at 2.81 to 1. The largest traders also favored going long, with Bitcoin at 1.68 to 1 and Ethereum at 1.55 to 1. The cost to borrow for leveraged long bets (funding rates) was positive: Bitcoin's 8-hour rate was 10.95% annualized, signaling strong bullish conviction, while Ethereum's was much lower at 1.44%. However, when large trades actually executed, slightly more were sell orders than buy orders (Bitcoin's taker buy-sell ratio was 0.99, Ethereum 0.93), suggesting some underlying hesitation beneath the bullish setup. Market breadth was slightly positive at 52.6% of all Binance perpetuals up on the day. Overall: positioned bullish but showing caution.

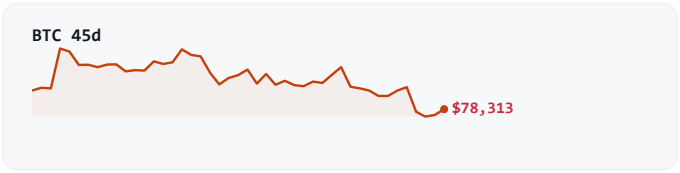

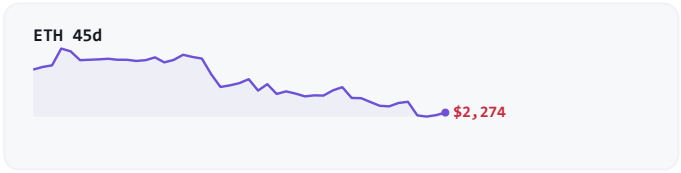

Funding Rate (annualised)

	Bitget	OKX	Bybit	Binance	Gate
BTC	+7.1%	+11.0%	+10.6%	+11.0%	+5.9%
ETH	+2.2%	+1.3%	-12.5%	+1.4%	-18.2%

What drove the market — and what didn't

Only causes that move prices, each with its source. Rumours and unconfirmed reports are kept separate at the end.

THE THREE THAT MATTERED MOST

Binance Reopens Withdrawals, Sees $3.64 Billion in Immediate Outflows

Binance resumed customer withdrawals on November 1 following the October 29 security breach, and customers withdrew $3.64 billion (2.1% of the exchange's $171 billion in total assets) almost immediately. Tracked wallet analysis showed $2.5 billion in confirmed outflows. The exchange said withdrawal volumes initially spiked but then declined after the reopening rush.

FBI Confirms North Korea's TraderTraitor Group Stole $6.3 Billion from Binance

On October 31, the FBI released a formal alert confirming that North Korea's state-backed hacking group, known as TraderTraitor, was responsible for the October 29 theft of over $6 billion from Binance—the largest cryptocurrency hack in history. The FBI requested the private sector's help in identifying and blocking the stolen funds, but noted that hackers have already used thousands of distinct blockchain addresses, making tracking difficult.

Bitcoin ETF Sees $643 Million in Outflows Friday, First Full Trading Day After Hack

US spot Bitcoin ETFs recorded net outflows of $643.2 million on Friday, October 31—the first complete trading session after the Binance hack became public. This ended a four-day inflow streak and left October with net outflows of approximately $516 million, reflecting institutional investor caution after the security breach.

REGULATION AND POLICY

US Elections November 3: Crypto Policy at Stake as Election Nears

With Congressional elections on November 3, 2026, the crypto industry faces regulatory uncertainty depending on which party gains power. Crypto PACs made a major final push supporting Republican candidates despite polling suggesting Democrats could gain ground. The election outcomes will shape crypto legislation and regulatory direction over the next two years.

HACKS, EXPLOITS AND OUTAGES

North Korean Hackers Launder $242 Million of Stolen Binance Funds via Tron and DeFi Bridges

Analysis published November 1 shows that the North Korean hackers moved approximately $242 million of the stolen $6.3 billion through DeFi bridges including Relay (which handled $48 million), THORChain, Chainflip, and Symbiosis, many via the Tron blockchain. In parallel, researchers estimated the hackers lost approximately $119 million in slippage on rushed trades over a 4.5-hour period, with Ethereum validators capturing roughly $30 million in MEV (maximal extractable value) profits from these transactions.

Bitcoin Staking Platform b14g Loses $1.47 Million to Zero-Token Withdrawal Exploit

On October 31, the Bitcoin staking platform b14g suffered a security exploit that drained approximately 97 million CORE tokens ($1.47 million) from the protocol. The hacker exploited a zero-token withdrawal vulnerability to drain 91 staking positions in a single transaction, highlighting continued risks in Bitcoin staking infrastructure.

07 · GLOSSARY

Every term used today, in plain words

CS Gorkem T
CS Tarik O

Breadth (market breadth) — The percentage of cryptocurrencies that rose in price on a given day. A reading above 50% suggests overall strength; below 50% suggests weakness. On November 1, 52.6% of Binance perpetuals were up.

Fear and Greed Index — A sentiment gauge measuring how fearful or greedy cryptocurrency market participants are feeling, on a scale from 0 (extreme fear) to 100 (extreme greed). November 1 closed at 34 (Fear), up from 30 the day before.

Funding rate — The fee leveraged traders pay to maintain long or short bets on perpetual contracts. Positive funding means traders betting up are paying; negative means traders betting down are paying. Higher rates encourage position-taking in that direction.

Long position — A bet that a cryptocurrency's price will go up. A trader 'goes long' by borrowing money to buy more than they can afford, betting on price increases.

Long/short ratio — The number of traders betting on price increases (long) divided by those betting on price decreases (short). A ratio of 2.5 means 2.5 long traders for every 1 short trader, indicating strong bullish positioning.

Mark price — The reference price used for perpetual contracts, calculated from the spot price and funding rates. Used to determine gains/losses on leveraged bets. Different from last-traded price.

MEV (Maximal Extractable Value) — The profit that validators or miners can make by choosing the order and inclusion of transactions in a block. On November 1, Ethereum validators captured about $30 million in MEV profits from the hackers' rushed trades.

Open interest — The total number of cryptocurrency contracts (or coins) that are currently open in perpetual futures markets. Increasing open interest suggests growing conviction; decreasing suggests traders are closing positions.

Open-interest change — The percentage rise or fall in total open contracts on a given day, indicating whether traders are entering new leveraged positions (positive change) or exiting (negative change).

Perpetual contract — A leveraged futures contract with no expiration date, allowing traders to bet on cryptocurrency price moves using borrowed money. Perpetuals pay funding rates between longs and shorts to keep the contract price anchored to the spot price.

Short position — A bet that a cryptocurrency's price will go down. A trader 'goes short' by borrowing cryptocurrency to sell it, then hoping to buy it back cheaper.

Taker buy/sell ratio — The ratio of aggressive buyer trades to aggressive seller trades that 'take' liquidity on an order book. A ratio below 1.0 means more aggressive selling pressure than buying; above 1.0 means more buying pressure.

Top-trader position ratio (top position ratio) — The long-to-short ratio among the largest/most influential traders on an exchange, not all traders. Divergence from the overall long-short ratio can signal whether whales are betting differently than the broader market.
