All five major exchanges agreed Bitcoin was around $71,454. Binance led the volume at $11.25 billion USD, followed by OKX at $6.93 billion. Bitcoin and Ethereum fell in lockstep with the broader tech selloff triggered by Nvidia's CEO resignation.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 00:00 UTC), not daily figures.

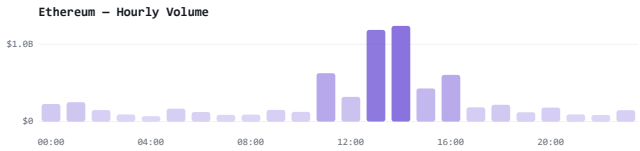

Bitcoin funding rates remained at 0.0001 per 8 hours (10.95% annualized), showing longs still willing to pay to stay long, but conviction was mixed. On Binance, the largest traders held a 2.29-to-1 long-to-short ratio, suggesting institutional traders remained long, though the taker buy-to-sell ratio was just 1.014 (only slightly more buying pressure than selling). Open interest rose on some venues (Bybit +6.52%) but was flat to down elsewhere (Binance +1.08%), indicating traders were repositioning rather than adding net-new bets. Market breadth was weak: only 39.95% of crypto assets were up for the day.

THE THREE THAT MATTERED MOST

Nvidia CEO Jensen Huang resigns, triggering $750M in crypto liquidations and Bitcoin plunge to 12-week low

Jensen Huang stepped down as CEO of Nvidia after 33 years leading the company he co-founded. Colette Kress, the company's CFO, took over as interim CEO. The surprise resignation sparked a broad tech selloff that sent Bitcoin to its lowest level since August 20, with $750 million in crypto futures liquidated.

DOJ seizes $1.2 billion from North Korea's Binance hack, shuts down FaceStealer deepfake scam that stole $400M

The U.S. Department of Justice obtained court authority to seize more than $1.2 billion stolen from Binance in 2024 by North Korean military hackers known as TraderTraitor. Federal agents also shut down cloud infrastructure used in the FaceStealer scheme, which used AI deepfake video calls to trick crypto workers into installing malware. The seizure represents the largest single crypto-theft recovery action on record.

Trump administration names CFTC and SEC nominees as MicroStrategy gets removed from MSCI indexes

U.S. President Donald Trump named two nominees each to the Commodity Futures Trading Commission and Securities and Exchange Commission for the first time in a year, signaling a new regulatory era for crypto and derivatives. Separately, MSCI confirmed it is removing MicroStrategy (which holds 387,860 Bitcoin) from its stock indexes, ending a significant institutional channel for passive capital into the company.

CS Tarik O

Every term used today, in plain words

Basis — The time period used to measure price changes. UTC day means 00:00–23:59 UTC on a single calendar day.

Breadth — The percentage of assets in the market that are up (rising in price) versus down (falling in price) on a given day. Measured as a percentage of the total.

Fear and Greed Index — A popular measure of market sentiment ranging from 0 (extreme fear) to 100 (extreme greed). Readings below 25 indicate fear; above 75 indicate greed.

Funding rate — A fee paid every 8 hours between long and short traders on perpetual futures contracts. When funding is positive, longs pay shorts (bullish bias). When negative, shorts pay longs (bearish bias).

Long-to-short ratio — A comparison of how many traders hold bullish positions (long) versus bearish positions (short). A ratio above 1 means more longs; below 1 means more shorts.

Mark price — The official reference price set by a futures exchange, used to calculate profit and loss and to trigger liquidations. It is typically the average of spot price and futures price to prevent manipulation.

Open interest — The total dollar value of all active (open) futures positions on an exchange or market. Rising open interest suggests traders are adding new bets; falling open interest suggests positions are being closed.

Open interest change — The percentage increase or decrease in open interest during a trading day. Positive change means new money entered the market; negative means money left.

Taker buy-to-sell ratio — A measure of aggressive buying and selling pressure. A ratio above 1.0 means more buy orders are hitting the market (aggressive buying); below 1.0 means more sell orders are hitting (aggressive selling).

Top trader long-to-short ratio — The long-to-short ratio calculated only among the largest traders on an exchange, not all traders. It reflects the positioning of professional or whale traders specifically.
