02 · POSITIONING

## How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way.

Funding, open interest and mark price are point-in-time (as of 11:00 UTC), not daily figures.

Traders were betting on price rises: funding rates stayed positive, meaning those betting on up-moves paid fees (6.6% annualized for Bitcoin, up to 6.7% for Ethereum on some venues). Bitcoin's open interest grew at Binance (+1.2%) but shrank at Bybit (−1.3%), suggesting mixed confidence. Ethereum's open interest rose at most venues. Long positions outnumbered short positions significantly: 1.5 longs per short for Bitcoin and 3.2 for Ethereum on Binance.

07 · GLOSSARY

Every term used today, in plain words

**Basis point** — One hundredth of a percent (0.01%). Interest rate changes are often described in basis points—for example, a 25 basis point rate hike means a 0.25% increase.

**Funding rate** — A fee paid between traders on perpetual futures exchanges. When funding is positive, traders betting on price rises pay traders betting on price falls. A higher funding rate means traders are very confident about higher prices.

**Long position** — A bet that an asset's price will go up.

**Long/short ratio** — The number of traders betting on price increases divided by the number betting on decreases. A ratio above 1.0 means more traders bet on up than down.

**Mark price** — The official reference price an exchange uses for a cryptocurrency at any moment, used to calculate profits and losses on futures contracts.

**Open interest** — The total number of active buy and sell contracts (longs and shorts combined) on a futures exchange at any moment.

**Open interest change** — The percentage increase or decrease in total active contracts on a futures exchange during a time period, showing whether traders are opening new bets or closing old ones.

**Perpetual futures** — Cryptocurrency contracts that never expire, allowing traders to bet on price moves using borrowed money (leverage) without a settlement date.

**Short position** — A bet that an asset's price will go down.
