NEUTRAL / MIXED

2026-11-02 00:00–23:59 UTC · all times UTC · data from Binance, Bybit, OKX, Bitget, Gate + Twelve Data

THE DAY IN ONE LINE

Bitcoin fell 1.94% and Ethereum fell 0.94% on November 2 as traders rotated into altcoins amid lingering caution from the Binance hack, with market breadth remaining positive despite high funding rates signaling leveraged betting.

Bitcoin fell 1.94% to $76,791 and Ethereum fell 0.94% to $2,253, with prices consistent across all major venues. Bitcoin futures dominated volume at $8.97 billion on Binance, nearly 1.2 times Ethereum's $7.48 billion; no venue showed a material premium or discount.

02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Funding, open interest and mark price are point-in-time (as of 23:00 UTC), not daily figures.

Traders heavily favored long positions (bets on prices rising): Bitcoin's long-to-short ratio was 2.30, with the largest traders pushing even harder at 1.67-to-1. Ethereum showed even stronger bullish positioning at 2.56 long-to-short. However, the taker buy-to-sell ratios (1.05 for Bitcoin, 0.98 for Ethereum) revealed only modest aggressive buying, suggesting traders were hesitant despite their bullish posture. Funding rates remained extremely high at 10.95% annually for both coins—the premium traders pay to hold leveraged bets—typically a sign of overleveraged market conditions and anxiety. Bitcoin's open interest grew 1.93% despite the price drop, showing traders were adding leverage rather than closing positions; Ethereum's fell 2.01%, indicating some caution. Remarkably, 70% of all Binance perpetuals (over 560 of 804 pairs) traded up despite both major coins declining, revealing active rotation into alternative cryptocurrencies.

07 · GLOSSARY

Every term used today, in plain words

CS Gorkem T
CS Tarik O

Altcoin — Any cryptocurrency other than Bitcoin or Ethereum; includes thousands of smaller projects with varying liquidity and risk profiles.

Breadth — The percentage of coins in a market that are moving up vs. down. High breadth (70%+ up) suggests broad market strength; low breadth suggests weakness is concentrated in major coins.

Fear & Greed Index — A sentiment gauge measuring market emotion on a scale from 0 (extreme fear) to 100 (extreme greed). Extremes often signal potential reversals.

Funding rate — A periodic fee traders pay to hold leveraged positions (bets using borrowed money). High funding rates signal overleveraging and anxiety; traders typically pay this every 8 hours on major exchanges.

Leverage — Using borrowed money to control a larger position than your own cash allows. Amplifies both gains and losses. A 10x leveraged position means a 1% price move causes a 10% gain or loss.

Liquidation — Forced closing of a leveraged position when losses exceed the collateral (margin) backing it. Often triggers a cascade of automatic selling.

Long position — A bet that an asset's price will rise. If you go long, you profit if the price goes up and lose if it goes down.

Long-to-short ratio — The balance between traders betting up (long) vs. down (short). A ratio of 2.3 means 2.3 traders are betting up for every 1 betting down.

Mark price — The price used to calculate leverage and trigger liquidations on derivatives. Usually the median of major exchange prices, preventing manipulation.

Open interest — The total notional value (in dollars or coins) of all derivative contracts currently open across all traders. Increasing open interest on a price decline often signals capitulation and potential reversal.

Open-interest change — How the total open interest moved during a period. Increases suggest new leverage entering the market; decreases suggest liquidations or position closes.

Perpetual futures — Derivative contracts that never expire and are constantly funded by traders to maintain a price close to spot (actual) prices. Used to take leveraged long or short bets without owning the underlying asset.

Short position — A bet that an asset's price will fall. If you go short, you profit if the price drops and lose if it rises.

Taker buy-to-sell ratio — The ratio of aggressive buyer-initiated trades vs. aggressive seller-initiated trades. Above 1.0 means more aggressive buying; below 1.0 means more aggressive selling. Values near 1.0 show balanced pressure.
