02 · POSITIONING

How traders were leaning

Funding shows which side is paying to hold its position (positive = longs pay shorts). Open interest is how much money is in open bets; its change over the day shows money coming in or out. Long/short is how many accounts lean each way. Top L/S is the ratio among the largest traders. Taker B/S is the buy-to-sell ratio of market orders.

Every term used today, in plain words

Basis — The difference between the futures price and the spot price. A positive basis (futures higher) signals long positioning; negative basis signals short positioning.

Breadth — The percentage of assets in a market that are trading up on the day. High breadth (over 70%) indicates broad-based strength.

Fear & Greed Index — A sentiment indicator ranging from 0 (extreme fear) to 100 (extreme greed). Readings below 30 signal fear, above 70 signal greed.

Funding rate — A periodic payment between long and short traders on futures exchanges. Positive rates mean longs pay shorts; negative rates mean shorts pay longs. Higher rates indicate more leverage and risk.

Long/short ratio — The ratio of open long positions to open short positions. A ratio above 1 means more traders are betting on price increases; below 1 means more are betting on decreases.

Mark price — The reference price used to calculate funding payments and mark unrealized gains/losses on futures. It smooths out spot price swings to prevent manipulation.

Open interest (OI) — The total value of all open futures contracts at an exchange. Rising OI often indicates new money entering the market; falling OI suggests positions are closing.

Open interest change — The day-to-day change in total open contracts. Positive change means new long or short contracts are opening; negative change means positions are closing.

Taker buy/sell ratio — The ratio of buy-side aggressive orders (takers) to sell-side aggressive orders. Above 1 signals more aggressive buying; below 1 signals more aggressive selling.

Top position ratio — The long-to-short ratio among the largest traders at an exchange. A high ratio (e.g., 2.0) means the biggest accounts are heavily net long.
